A Discrepancy Somewhere.

When the 1920 census was taken in Bellefonte a year ago it showed a population in the town of 3,996, against a population of 4,145 in 1910 and 4,216 in 1900. While various reasons were assigned at the time for the falling off in population there were a number of doubting Thomases as to the correctness of the census. Recently the Postoffice Department requested all postmasters to compile a record scope of their office and the count made by the carriers of the Bellefonte postoffice shows approximately five thousand people in Bellefonte; that is inside the borough limits. The difference between the regular census and the postoffice count, it will be noticed, is one thousand, which is considerable of a discrepancy, and naturally there is now just cause for wondering which one is right.

Trout Fishing Season Will Open Next Friday.

Before the next issue of the 'Watchman" reaches its readers all the disciples of Izaak Walton will be out trying their luck on the wily trout. In fact the fish editor of this paper has his rods all burnished, a new fly book stocked to the bulging point, and is lying awake half the night picturing the joys of a two day's outing at the opening of the season. Of course he is only one of many who are probably in the same boat, and one and all are doubtless hoping the streams will be just right and trout plentiful enough to furnish just the right kind of sport.

Naturally many local fishermen will put in their first morning on the local streams, Spring creek and Logan's branch, and it is quite probable that they will meet with just as much luck as those who visit distant streams. From the indications in Spring creek, especially within the limits of Bellefonte, the trout are quite plentiful. In fact in a walk along that stream on Sunday the writer saw several magnificent specimens of the speckled beauties jump for fly at a place in the stream we had no idea the trout congregated; and which would indicate that the opening day, with favorable weather, should afford some good sport.

There is always a certain percentage of fishermen who hang their luck on the mountain streams and Fishing creek and these will likely make their pilgrimages to their favorite pools this year as they have in past years. The past winter was a most favorable one for trout in the mountain streams. None of them were frozen dry and the trout were able to survive the winter without being driven down stream into deeper waters. Of course much will depend upon fishermen's luck, but it is not always the lucky fisherman that can tell the biggest fish story.
