 State Realty Co. to Charles Fogleman, tract in College township; \$1.

Solving the Problem.

A young salesman had embezzled from his kind-hearted employer a considerable sum of money and had lost every cent of it on the races. He was apprehended, and the boss didn't know just what to do about it.
 "Keep him on the job and deduct what he owes you from his pay," counseled an advisor.
 "But," wailed the victim, "the amount is too large. He could never make it up that way. His wages are too small."
 The other ruminated for a moment. Then his face cleared.
 "Well, then raise his salary," he suggested.—American Legion Weekly.

The Cottage Gardener

The Gardener Who Really Cares, and Who is Depending Upon His Own Past Experience to Gain the Best Results—the First Vegetables and Flowers of the Season—Must Have a Good Coldframe to Harden Off His Plants.

Do Not Overcrowd Your Young Plants

Transplant From Flats to Larger Boxes or Roomy Flower Pots.

Overcrowding, perhaps, is the greatest fault of the average gardener. Because the plants are small when they first appear above ground, he will not space them properly, because they look lonesome with an expanse of bare soil between them. However, they will grow fast, and at maturity will use all the space allowed them, and usually are growing into and over each other.
 This fault should be corrected when the transplanting is done, or if the seeds are sown in the open ground, by judicious thinning. Follow directions, which are always contained on seed packets as to proper distances, to the letter. Work with a tape measure or yardstick. The crop of many vegetables will be in proportion to the chance they have to develop. The bush lima bean is an excellent object lesson. Many gardeners have given up the bush lima as not being productive enough to justify its space. But give the individual bushes 18 inches apart, so they will have a chance, and there will be a bountiful crop with ordinarily good soil and moisture conditions.
 The rule to follow in transplanting seedlings is to move them as soon as the leaves touch. The first transplanting should be done when the first pair of true leaves appear. If they are not placed at sufficient distance, and often it is not convenient to do so at this time, because of lack of space indoors or in the hotbed, be prepared to move them when the developing leaves touch. If you do not, they will begin to spindly in the struggle to reach the sunlight.
 The percentage of loss is greater as the plants attain size, but early transplantings go a long way to obviate this loss by developing strong fibrous root systems, especially in the case of plants which, undisturbed, form tap roots, or a long root that goes straight down some distance before giving off branches. When this long root has developed far the plant receives a severe check in being transplanted, from which it takes a long time to recover.—National Garden Bureau.

violate this loss by developing strong fibrous root systems, especially in the case of plants which, undisturbed, form tap roots, or a long root that goes straight down some distance before giving off branches. When this long root has developed far the plant receives a severe check in being transplanted, from which it takes a long time to recover.—National Garden Bureau.

SPRAYING TREES

Spray fruit trees with arsenate of lead and bordeaux mixture first, as the buds swell; second, when the blossoms show their characteristic color; and third, as the last of the petals are falling.

GARDEN TOOLS

The first cost of garden tools is of minor consideration. The care they are given and the years of usefulness is the all important factor.

PLANT SWEET PEAS EARLY

Early and deep-planted sweet peas are likely to prove most satisfactory.

Good Seed Bed Is Always Necessary

Soil Should Be Carefully Sifted Before Placed in Containers.

A sponge's capacity to take up water is largely dependent upon the size of the holes in it. A coarse sponge with holes as wide in diameter as the finger and many of them, will not hold as much moisture in suspension as will a sponge of the same size with fine pores and smaller orifices.
 The soil acts as a sponge, holding moisture for the plants, and the finer the soil the more readily it holds moisture and the more moisture will it contain. Finely sifted and close packed, the tiny rootlet of the seedling comes in contact with its nourishment at once and starts rapid growth. If the soil is lumpy, with large interstices, a seed may send its first sprout

SIFT THE EARTH TO BE USED IN STARTING SEEDS IN POTS OR FLATS. IT IS EASILY DONE AND WELL WORTH THE EFFORT.

out into space until it can reach more closely packed earth. The fine soil draws moisture from the bottom upward by capillary attraction, and the finer it is the more readily the moisture is drawn through the surface and the soil evenly moistened. In coarse, lumpy soil the water is not drawn up regularly from below.

For this reason it is necessary to take extra care to sift the soil for seed boxes, and for the top layer of the hotbed or coldframe. In order to prevent too rapid drying out, it is necessary to pack the fine soil firmly over the seeds.

The coarse screenings from the soil are useful to spread over the bottom of the seed box to provide drainage. Over this the fine soil should be spread evenly and firmed down. The finer the soil and the more fertile it is the better the germination and quicker the growth of the little plants.

A great deal of seed is wasted, and many attempts at sowing seeds indoors prove failures at the very start because the soil is not properly prepared. Next to this is the failure to provide suitable drainage. The seed box must be built so that the soil will retain moisture, but will not remain water-soaked and sour. Overwatering promotes a fungous disease known as "damping off" which causes the seedlings to rot off at the surface of the soil. This fungus often will ruin a box of seedlings before the grower knows what is happening. It can be obviated by providing drainage at the start.—National Garden Bureau.

PLANTS MUST BE FED

Plants, like animals, must be fed. Their diet consists of organic matter derived from manure or decaying vegetation and from chemical fertilizers, especially nitrogen, phosphoric acid and potash.

MOTHER NATURE GETS BUSY

Old Mother Nature wakens her children early in the spring and the wise home gardener works in co-operation with Mother Nature.

SWISS CHARD

A few hills of swiss chard started in a window seed box will give early greens.

To Check a Cold.

Sometimes a chill or chilly feeling indicates a beginning cold. At the time the sensation is first felt one should go home and get into a hot bath and then from this (after drying the body by vigorous rubbing) go immediately to bed in order to get into a perspiration. Chilling drives the blood from the surface of the body into the lungs, bronchial tubes or elsewhere. An inflammation begins then, unless one hastens to open the pores by a hot bath and free perspiration.

A hot drink—hot lemonade or hot tea—after the bath aids greatly in exciting perspiration. As soon as there is a feeling of warmth and considerable perspiration the subject invariably falls into a sound sleep. He should remain in bed until the next morning.

If there is any headache or digestive disturbance it is always advisable to take citrate of magnesia or castor oil at bedtime.

Puzzling.

Judge—You say that you are innocent. How do you explain the fact that you were found near the scene of the robbery with the stolen property in your hand?
 Prisoner—That's what's puzzling me, too, yer honor.—Boston Transcript.

MEDICAL.

All Out of Sorts?

So Was This Bellefonte Woman Who Tells Her Experience.

All too often women accept their pains and aches as natural to their sex. They fail to realize that weak kidneys are often to blame for that backache, those headaches, dizzy spells and that tired, depressed feeling. Thousands have found new health and strength by helping the weakened kidneys with Doan's Pills—a stimulant diuretic. This Bellefonte case is one of many:

Mrs. Susan Lyons, R. F. D. No. 1, Box 49, says: "I suffered with disordered kidneys and my back gave out and ached as if it would break. I was hardly ever free from nervous, dizzy headaches. I used Doan's Pills bought at Zeller & Son's drug store and was relieved."

Price 60c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Pills—the same that Mrs. Lyons had. Foster-Milburn Co., Mfrs., Buffalo, N. Y. 69-14

Care of the Feet

Foot Trouble is Unnecessary, unless caused by some Physical Ailment.

The trouble with the average person is that they do not give foot trouble the proper attention. Ill-fitting shoes usually cause foot trouble—and fitting feet is a profession. Thirty-seven years at the game of fitting feet eliminates all guess work as to our proficiency in that respect. Mr. Wilbur Baney, our clerk, has had twenty-five years experience. We do not guess. We know how to give you the proper size, and the kind of shoes that your feet need.

The Next Time you are in Need of Shoes, and your Feet are in Trouble—try Yeagers

Yeager's Shoe Store
