Forester Finds Some Large Trees.

Harrisburg.—An oak measuring 21 feet in circumference at one foot above the ground and standing 80 feet high has been entered in the lists of the State's large trees. District forester Beach, of Mount Union, who reported the find to the State Forestry Department says he believes it to be the largest in Pennsylvania if not in the United States. Four feet from the ground the tree measures thirteen and one-half feet in circumference while nine feet higher it is a foot and a half larger. This is accounted for by the fact that the tree was struck by lightning and its growth made irregular. The giant oak stands along a township road between McConnellstown and Markelsburg.
