Bellefonte, Pa., October 8, 1926.

VIRGINIA BIG FACTOR IN U. S. OYSTER SUPPLY.

At sunrise, September 15, more than 10,000 Virginians went to work on their task of supplying oysters to meet what probably is the keenest demand in American history. Virginia's oyster season opens officially on September 15, there being a law prohibiting the removal of stock from the "rocks" before that time, but this year a number of shuckers who have year a number of shuckers who have their own beds were forced by the de-mand to start shucking and shipping as much as ten days in advance of the official opening of the season. Oystermen in Virginia think that two outstanding factors have contri-

buted to the unusually keen demand for their stock this year. In the first place, they say, the national advertising campaign which was started last year has "pepped up" the Ameri-can appetite for bivalves; and in the second the Federal government's certification of wholesomeness which must be given before oysters from any source may go into interstate commerce has inspired in the people a degree of confidence which they never had for any uncertified food. The public of this day, it is admitted, has come to demand pure food certifica-tion for all its food, even those kinds for which it has the greatest fondness. At any rate whatever the reason, oyster demands for the beginning of

the present season, appear to be greater than ever before, and if cool weather begins early in the fall and continues through the winter the oystermen confidently expect the best year of business they have ever had. Virginia's natural oyster rocks, al-

though much smaller than they used to be, still constitute the most important source of this delicious and wholesome food to be found in America. There are thousands of acres of natural rock in the James, Rappahannock, York and Potomac rivers. Any citizen of Virginia may tong these oysters during the season, and thousands of men make theid living by working on the public rocks, selling the large stock for shucking purposes, and the small stuff for replanting on

private growing-beds.

The State makes a practice of renting ground to individuals for oyster planting purposes, charging only a nominal sum each year as rental. The public rocks, of course are never rented out, but are open to all persons

Shucking houses, purchasing their stock from the private beds, do business by removing the oysters from their shells and shipping them in refrigerated containers to all parts of the country. There are in Virginia more than 300 shucking houses each more than 30 employing from two or three up to a its weight in silver. hundred or more shuckers. State and

into Virginia, including not only the shucked and shell stock sold directly for food, but also the seed stock shipped out of the State for replanting.-Exchange.

Packaged Apples Must Conform to State Law.

In order to protect consumers, as well as producers, shippers and dealers, the State has an apple packing law which applies to all apples packed

in closed packages.

The law provides that the name and address of the packer, the variety of apple, the size of package and the minimum size of fruit must be marked on the outside of the package. It further provides that the apples on the face of the package must be a fair representation of the fruit in the balance of the package. The law is compulsory on all apples packed in closed packages within the State.

The law does not require the compulsory use of the standard apple grades, but all apple packers are encouraged to use these grades as the basis for the grading of their output. These optional grades are the same as the federal grades, which have been adopted as the standard in most of the Eastern States. While the use of these standard grades is entirely vol-untary with the individual, packages of fruit marked with these standard grade terms must comply with the requirements for the particular grade of

fruit marked on the package.

The State Department of Agriculture of Harrisburg will be gald to furnish all interested parties with copies of the law and also the standard apple

Game Seasons.

Harrisburg, Sept. 27.—Prospects are good for a successful hunting season this fall, according to reports received by the State game commission. The present summer has been exceptionally good in providing for food for game and birds.

The entire State has been closed this year for wild turkeys and Hungarian quail.

The season for ruffed grouse will extend from Nov. 1 to 13. Previously this had been a month. The season's bag limit has been reduced from 15 to ten birds. Male ringneck pheasants are in season the same time as grouse. Rabbits and hares also have been

reported plentiful with the season extending only through the month of Deer can be killed from Dec. 1 to

15 and bear Nov. 10 to Dec. 15.

MOST POWERFUL

WORLD PERFUME.

Musk is one product of world com-merce in which China practically enjoys a monopoly—not a large one, to be sure, since the annual output is at best only some \$400,000 gold, but the product itself is worth many times its weight in silver, and for that matter, gold as well, in these days of high exchange, says the Far Eastern Review,

About one-half of the total output stays in China and is used especially by the Cantonese in compounding pills that form the best-known remedy in the Chinese pharmacopaeia for Asia-tic cholera. The Chinese also use musk to keep moths out of furs and clothing, and as a perfume, the odor being quite popular in the better grades of perfumery.

Practically all of China's musk comes from Tibet through the Szech-

wan frontier, the chief markets being Sungpan and Tachienlu the former being by far the more important. Sometimes, when the road from Sungpan to Chengtu is unsafe, owing to brigands, part of the musk will be taken south and marketed in Tengyuch to go to India. This happened to a considerable part of the output in 1915, when 6,890 ounces out of a total of 25,367 were so shipped. The value of the 1915 musk crop was \$266,000 gold. In 1916 some 25,160 ounces, valued at \$407,000 gold, were shipped. Because of its commanding position in the perfume industry France has been the largest purchaser of China's musk, the United States being second; but in 1915 the United States forged ahead and bought more than a quarter

of the entire output. Good musk is bought for 10 times its weight in silver at Sungpan, and at Chungking for 18 to 25 times, so there is a heavy profit somewhere. Small supplies are brought out to various points along the Lungan road, where every coolie seems to have some about him, and the inns reek with the sick-ly smell. The musk is brought down in its pod, and the best kind is recog-nized by a nice brown color, and in its pure state by its overpowering stench; pods with grayish or dull-colored musk are rejected. It is retailed by one one-hundredth of an ounce, but it is adulterated more than any other

article in the Chinese market. By far the largest herds of musk deer are to be found on the southern shores of the Koko-Nor, and the supply of musk there (at T'aochou) is larger than the quantity that comes through Sungpan. In fact, great quantities of musk do not come to Sungpan at all, but are sent east to Yuchow, in Homan, where a fair is held in the ninth and tenth moons, many of the Sungpan traders visiting this place. At Tachienlu musk is the most valuable export, practically

Musk is a secretion of the male musk Federal bacteriologists, chemists and deer. Three kinds of musk are dis- in the Cincinnati Enquirer. sanitary inspectors wend their way tinguished in commerce, the most imfrom one to another of these houses, portant and valuable being the Chin- Brazil and South Africa. Although making sure that the regulations are abided by. In this connection, it is ese or Tongkin musk imported printhe diamond is nearly always water-clear in color, there are blue, green interesting to note that sanitary requirements for oysters are much more rigorous than those for milk, fresh vegetables or any other food that is given public health certification.

At a rough estimate oysters bring from \$10,000,000 to \$15,000,000 a year into Viverinia including not only the pod remains. The Chinese pods vary greatly in value according to quality and genuineness. Some musk collected from the Western Himalaya is exported from India. It is much less prized than genuine Tongkin musk. The third variety, known as Kabarine or Siberian musk, is exported from Central Asia by way of Russia. It is in large pods, said to be yielded by a distinct species of deer, and is very inferior in point of odor.

The musk deer has a wide distribution over the highlands of Central and Eastern Asia, including the greater part of Southern Siberia, and ex- blood, which come from Burma. The and Cochin China on the southeast, those from other places. Weight for always, however, at great elevations weight the perfect ruby is of much -being rarely found in summer below 800 feet above the sea level, and ranging as high as the limits of the thickets of birch, rhododendron, and juniper, among which it conceals It-self in the daytime. It is a hardy, solitary, and retiring animal, chiefly nocturnal in its habits, and almost always found alone, rarely in pairs, and never in herds. It is exceedingly active and sure-footed, having, perhaps, no equal in traversing rocks and pre-cipitous ground; and it feeds on moss, grass, and leaves of the plants which grow on the mountains among which

it makes its home. Most of the animals of the group to which the musk deer belongs have some portion of the cutaneous surface peculiarly modified and provided with glands secreting some odorous and oleaginous substance specially characteristic of the species. The situation of the specially modified por-tion of skin is extremely various, sometimes between the toes, as in sheep, sometimes on the face.

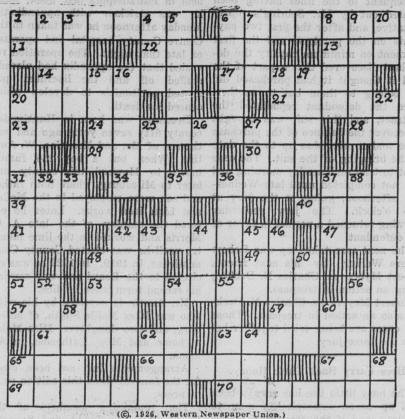

Owing to the great value of musk to the perfumer, the chemist early tried to solve the problem of making it artificially, and finally one Baur accidentally succeeded in imitating the odor in a compound made by linking Madagascar; at its finest it is of a the radicle of benzene and that of tertiary butyl alcohol. It is not a true musk, as the natural product belongs to quite a different class of chemical compounds. However, "Muc Baur," as it was called in the trade, enjoyed great popularity and sold for \$20 gold a pound as far back as 1900, the product so sold being adulterated with 19 times its weight of acetanalid.

There are other artificial musks in the market now and the adulteration with inert chemicals has ceased. None of these, however, has the power that makes the product of Tibet so valuable, that of fixing the more fugitive floral odor and giving the resulting perfume lasting qualities that are —If you want quality job work it can be had at this office.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this pussle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the pussle. Thus No. 1 under the column headed "horizontal" defines a word which will Thus No. I under the column headed "normoutal" dennes a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are diog tionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

CROSS-WORD PUZZLE No. 9.

Horizontal.

1--A large bird 6-Used for smoking 1-Not many 2-Lubricated 3-Used in boating

4-Winner

17—Part of the area of a circle 10—Used to measure gas 11—Circles 13—One of the articles

84-Dejected 88-An exclamation \$9-A wriggly inhabitant of the sea 81-Recent 86.—Instrument used by doctors 87—Fear

89—A titled personage 40—Part of a ship 41-Attempt 51-Thus 49-Existed -A tree

59—A visitor 63—Smell 61—A foreign ruler 63—Sm 65—A small, sharp bit of metal 66—A popular modern invention 67—The sewed edge of clothing 69-One who examines ore 70-Put together

9—The load of a ship 10—Otherwise 15—T 16—Large woody plants 18—Island near Greece 19—Movement of the ocean 20—Power of attraction 22—Keenest 25—Work 26—Man's name 27—32—Organ of the body 33—Distorted 27-Bend down 35—Regret 36—Used in fishing 37—Part of a circle 38—To court

1-A preposition

9-The load of a ship

animal

37—Part of a circle 38—To court
42—A traveling star
43—To knock 44—A playing card
45—To be in debt
46—A line of mountains
48—Mouth of a bird 50—To stupefy
52—Found in a desert
54—Pertaining to the moon 55—Harmony 56—Refuse from a fire 58—Simple jokes 60—Reverberation 62—Exist 64—Also

2—A numeral 3—To tes 4—To make a noise like a dove

8-Common name of a fur-bearing

15-To grant

68-Myself

62—Exist 65-A parent Selvision will appear in next issue

Nature Decreed No Monopoly in Gems. | Solution to Cross-word puzzle No. 8.

Precious stones come from most out-of-the-way places, says a jeweler "The diamond comes from India,

on account of its hardness they gave it the name of Adams.

"The ruby, which is next in hardness and was used so lavishly in the crown jewels and regalia of the king of Burmah, now in the Indian section of the Victoria and Albert museum, South Kensington, comes from Burma, Ceylon, Mandalay, Afghanistan and Siam. There are also ruby mines in Australia.

"The spinel, whch is distinct from the ruby proper, is a clear, bright red with a bluish tone. The choicest rubies are those the color of pigeon's tends to Kashmir on the southwest Indian ruby is lighter in color than higher value than the diamond, but the stone is so full of flaws that it as the diamond.

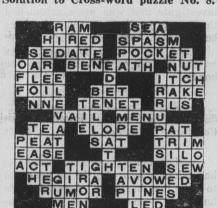

"The sapphire, which is of such a beautiful blue, comes from Burma, Ceylon, Borneo and Australia. It is also found in Europe in the Rhine val-Brazil, as does also the white sap-

"The emerald is the most valuable of the 'beryl' group, and comes from Colombia, in South America, India, White pine New South Wales, Serbia and parts of Egypt. The earliest emeralds we Almost 6 million little white pine Egypt. The earliest emeralds we know of were those that came from Celopatra's mines in Egypt. The finest are those from Colombia where the wonderful emeralds which so dazzled the Spaniards on their conquest of Mexico were afterward found to have come; they have more flash and are of a richer and deeper color than those from other countries.

"The aquamarine comes from the Ural mountains in Russia and also from Brazil; in color it ranges from a pale sea green to a bluey tinge. The morganite is more commonly known pinky mauve orchid tint. It was given the name of 'morganite' on the occasion of the late J. P. Morgan giving to England the largest known specimen of it, which is now in the mineral gallery of the Natural History museum, South Kensington.

Power From the Sea.

The world's industrial power of the future may be drawn from the heat of warm sea water. Already some scientists think they have found a way of utilizing this latent energy. The warm sea water will, they assert, evaporate carbon dioxide or ammonia. And the pressure thus obtained can be used in steam turbines to produce tremendous electric power.

20,000,000 Trees Will be Available for Distribution.

An inventory of the forest tree nurseries operated by the State De-partment of Forests and Waters shows that more than 20,000,000 trees will be available for distribution this fall and next spring. This is more than twice the number that have ever been available at any time for reforestation work. The Clearfield nursery leads with more than 9½ million trees. This is the largest number of trees that have ever been available for the stone is so full of flaws that it shipment in any nursery operated by cannot be cut to the same advantage the Department. The Mont Alto nursery in Franklin county comes second, with almost 4 million trees, and the Rockview Nursery at the western penitentiary in Centre county is third with more than 2½ million trees. The ley. The star sapphire, which is Greenwood nursery at Greenwood rather lighter in color, comes from Furnace, Huntingdon county, will have more than 2 million trees and the forest tree nursery at the Hunting-don Reformatory will have almost 2

White pine leads among the trees trees will be ready for shipment this fall and next spring. Scotch pine comes second with more than 4 million trees; red pine is third with almost 4 million; and Norway spruce is fourth with more than 2½ millions. More than one million each of pitch pine and European larch are ready for shipment. Among the other trees that will be shipped are red oak, black locust, yellow poplar, white ash, and American elm.

Forestry officials predict that 1927 will be the big year for forest tree planting in Pennsylvania. The planting of the 20 million trees during this fall and next spring will mean the reforestation of more than 20,000 acres of forest land. If given adequate protection and good care these planted trees when mature will produce about 700,000,000 board feet of lumber which is urgently needed by the industries and people of the State.

Lumbermen to Meet at State College.

The Pennsylvania Forest Products Manufacturers' Association will meet at the Pennsylvania State College Thursday, October 28th. Most of the forenoon will be devoted to business matters. During the remainder of the day there will be a speaking program featuring a talk on "Standardization of Fomest Products."

ell established corporations are not seriously affected by death, and are the proper avenues through which estates should be settled.
