Once considered chiefly as a pest, the mole is now regarded as an important article of commerce, since the demand for its fur involves a business of more than \$2,000,000 in this country annually, says Popular Mechanics Magazine. The most desirable varieties come from abroad, but more than \$100,000 worth of raw American moleskins have been marketed for fur. While the animal does considerable injury to crops, it is sometimes of benefit in destroying harmful insects.

### Fast Flight Soon.

"Around the world in 20 days" will be practical in a few years, according to calculations of French aeronautic experts based on the numerous flights from Paris to the Far East accomplished in the last two years.

From a detailed examination of the various flights it is apparent that the actual flying time over long distances was only a small part of the time taken, due to delays on the ground. Thus, Pelletier D'Oisy, who flew from Wm. Rockey is making extensive The Americans, Brock and Schlee, mprovements to the interior of his flew from Paris to Rangoon, 6,300 miles, in ten days, having lost one day at Constantinople, owing to pass-

Of course, rone of these men flew at night. It is therefore deduced that, even at present, the Paris-Java flight, of a little more than 8,000 miles, can be made in seven days. As the circumference of the earth is 24,-000 miles, the entire circuit could be made in three weeks. But for this it will be necessary to arrange the various "jumps," each of which would be made by a different machine with a

The airplanes of 1927 are vastly superior to those of three years ago as far as the motors and radius of Mr. and Mrs. E. R. Tussey and action are concerned, but the limit of family moved into the Goheen home human endurance has not varied. This question of a constant effort over ten or more days.

As far as commercial flying has progressed it may be taken that 1,200

miles a day is the average distance possible. When special measures have been taken to make night flights safe the time of the world girdling flight will be appreciably diminished.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.
