EXPERIMENT IN REARING RING-NECK PHEASANTS.

The board of game commissioners taking an important step toward perfecting Pennsylvania's system of game management in deciding to experiment with the rearing of ring-necked pheasants and wild turkeys...

Ring-neck pheasants have become very popular as game birds in Pennsylvania. They are not only handsome as trophies, but their flesh is delicate in flavor, and as they learn the meaning of rings and guns they come very clever in evading the hunter.

The game commission plans to distribute eggs among the various refuges where there is open ground sufficiently extensive for establishing propagating plants, and where the refuge keepers can handle this work with other activities.

The New York State conservation commission is so much interested in the success of this undertaking that it has offered to donate 5,000 pheasant eggs for Pennsylvania's use.

While it is possible to obtain gains with hogs on good forage alone, the best returns, according to Mr. Wuichet, follow addition of grain to the forage, feeding two to four pounds of grain a day for each 100 pounds of live weight.

It is advisable for the prospective orchardist to order his trees six months or more in advance of planting. By placing his order early, he has better assurance of getting the quality and kind of trees desired and of having the trees arrive at the proper time for planting.

Proper housing of poultry is of vital importance in the success of poultry keeping. A house should be so designed that it can be economically constructed. It should provide for perfect protection from storms, afford sufficient sunshine during winter months, give plenty of ventilation without drafts, and possess uniformity of temperature.

Legs Are Sign of Brains Physiologist Says.

Bow legs are a sign of both brains and health, Dr. Joseph Interland said in a speech before the semi-annual sum of the Research Association of New York. Basing his talk on research of the Pediatricists' association, he said that many famous men of history were unable to knock their knees together or stop a pig in an alley.

FARM NOTES.

Plant more carrots, beets and swiss chard for greens. Save the pea vines this year to turn under as fertilizer this fall.

Try a new sweet corn this year. There is a long list from which to choose.

Radishes and lettuce may be planted the first warm days of spring; peas and onions may do better to better to wait until the weather is more settled.

Don't plant all your carrots or beets at one time, but make several sowings of each, a couple weeks apart. They're so much nicer when young and tender.

Soy beans are now grown in a wide variety and a seed house of recognized standing should be consulted as to the adaptability of any variety for the section where it is desired to grow this legume.

That long-standing belief that a hog is naturally a dirty creature who revels and thrives in a mud wallow has been completely wrecked by 500 Iowa farmers.

The fact is that the hog is as clean as any other farm animal, but until recently has never had a chance to prove it. Given clean pasture lands on which to feed, instead of the old-fashioned hog-pen, regular baths and clean bedding, the hog will produce bigger and better pigs, and more of them.

These are the facts brought out by E. L. Quafe, farm expert, reporting in The Farm Journal the results obtained by the 500 Iowa farmers who have given their porkers a chance to lead hygienic lives.

Farmers who raise their hogs year after year on the same ground and in the same unclean quarters are exposing them to periodical ravages of parasites which kill off many and stunt the growth of many more, the best cases, directed by Iowa farm bureau experts show.

In one case an owner put 18 sows on clean alfalfa pasture land, washed them carefully before they gave birth to their litters and housed the pigs in clean quarters where parasites had no chance to develop.

Eight other sows were kept in an old-fashioned pigery under the old conditions. These gave birth to 48 pigs, of which only 16 were alive at the end of four months and all of the 16 were stunted and unthrifty.

Hogs will live on pasture or on grain alone in the summer, but they'll live far better and produce more economical pork if the pasture and grain are combined.

A saving of from 15 to 25 per cent. of the total amount of grain and supplements may be expected through the use of forage as a supplement," says J. W. Wuichet, live stock extension specialist at the Ohio State university.

How much difference in time that may be was demonstrated in a recent experiment. It was found, Mr. Wuichet reports, that spring pigs on pasture, fed limited grain, took 47 more days to reach market weight than did spring pigs on pasture and full grain feed.

For hog pasture alfalfa leads the list, followed closely by red and alsike clover, rape or rape and oats mixtures. First-year sweet clover also makes good pasture. Blue grass is the best permanent pasture for most sections, but permanency is its chief virtue.

It is advisable for the prospective orchardist to order his trees six months or more in advance of planting. By placing his order early, he has better assurance of getting the quality and kind of trees desired and of having the trees arrive at the proper time for planting.

The Anti-Alcoholic League reported 778,028 known stills in the year 1917. The number has increased with alarming steadiness, until today the same organization now reports three millions.

There is one wine-shop for every eighty inhabitants in France, a larger percentage than any other European country. Germany counts one for every 246 persons; England one for every 430 and Sweden only one for every three thousand.

The machine is an application for laboratory use, of the same air-cleaning principles as are used in the threshing grain aspirator. Both of these devices are protected for public use under the same public patent.

Quality of eggs produced on the farms can be improved by marketing them at least twice a week in hot weather. The eggs should be kept in a dry, cool, well-ventilated place.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle.

Colleges Seek Changes for Radio Broadcasting.

The problem of providing satisfactory wave lengths and power for college radio stations is being worked out by the federal radio committee with the co-operation of a committee representing the Association of Land Grant Colleges.

Twenty Land Grant colleges which are supported by federal and State aid, regularly send out radio educational programs, some of them giving extension courses.

While most of the college stations report satisfactory broadcasting conditions, some desire increased power change in wave lengths and elimination of interference. Members of the college radio committee declare seven to nine in the evening is the best time for educational programs.

College radio men have found day time satisfactory for broadcasting such types of education as home economics.

France Consumed More Alcohol in 1927 Than Any Other Country.

France in 1927, as in all previous years, consumed more pure alcohol than any other country in the world.

Official figures published in "L'etole Bleue" shows that the average Frenchman makes away with fifteen quarts of pure alcohol yearly—that is, before the law. But this means only one-half the story. For besides this acknowledged taxed consumption, there is an enormous quantity of the liquid made in private stills throughout the country.

The Anti-Alcoholic League reported 778,028 known stills in the year 1917. The number has increased with alarming steadiness, until today the same organization now reports three millions.
