

Your Health, The First Concern.

"For the most of us, two weeks out of the year's fifty-two are set aside during the summer months for the annual vacation. And for many these two weeks have in the past invariably meant hustle and bustle, late hours, 'going the pace' and a return home,

going the pace and a return home, as one honest soul remarked, 'more dead than alive," said Theodore B. Appel, Secretary of Health, recently. Certainly there is a great deal of excitement in rushing hither, thither and yon, gaily living a new life and generally indulging in a hectic time. For many there is much fun in it But for the soldier mu prior to June 27, 1905. This \$40 rate comme 4, 1928, in the cases of pension roll who had att of 75 years on or prior 1928. When the pension For many there is much fun in it. But there is little health and sense to it. And these factors should be given more consideration than they have received in the past when plans are be-ing made for the annual sojourn.

A vacation in these days of high gear living should mean much more than diversion which burns up energy. Change is not enough. Rest and common-sense recreation is what the average vacationist needs. One does not need to enter a sanatorium to achieve this happy combination eith-er. A few less miles at high speed in your car, a few more hours of restful sleep each night, a few less midnight cabarets and a great deal more thought to the real object of your two weeks' furlough will in most instances achieve the object.

If one were a hermit or a back woodsman there might be some excuse for him to use his two weeks away from home in one wild endeavor to catch up with life. But for the man or woman who has been traveling at top-notch for a year to increase the devitalizing demands upon the body under the spell of the vacation is sheer folly.

The vacation to do you real good should include: · \*\*\*\*

1. Real rest.

- Change of location.
- Good food.

4. Avoiding the use of luxuries a a substitute for a healthy diet.

5. A super-abundance of out-door living and fresh air.

Two weeks of rational vacation living can not make a new man or woman of one but they can lay a firm foundation for a healthier and a happier year. Therefore, why not plan a pilgrimage this season that will in-clude the prime essentials? Discover what a real vacation really is and what it will do for you. Curiosity on this point will pay handsomely.

## **INCREASE OF PENSIONS TO COMMENCE JUNE 4**

Representative Louis T. McFadden has for many Congresses been endeavoring to obtain an increase of pension for all widows of the Civil and Mexican War and the War of 1812 in the sums of \$40 and \$50 per month.

However, the Congress has not However, the Congress has not seen fit to allow \$50 per month pen-sion for these widows, but has finally agreed upon a pension of \$40 per month for widows who have reached the age of 75 years. Although Con-gressman McFadden stood out for the \$50 rate this \$40 rate became law on May 22 1028 May 23, 1928.

The widow or former widow, when 75 years of age, of any person who served in the Army, Navy, or Marine Corps of the United States during the Civil War for 90 days or more, and was honorably discharged from all contracts of service, or regardless of length of service was discharged for disability incurred in service and line of duty, is entitled to \$40 per month under the act of May 23, 1928. Marriage to the soldier must have been

This \$40 rate commences on June 4, 1928, in the cases of those on the pension roll who had attained the age of 75 years on or prior to June 4, 1928. When the pensioner attains the age of 75 years after June 4, 1928, the date of commencement of the \$40 rate will be the date accepted as that on which age of 75 is attained. Per-sons who had not attained the age of 75 years on or prior to June 4, 1923, should, about the time of attaining the age of 75, call up their cases by letter in which the date of birth should be given. This is necessary to enable the Bureau to fix the date of commencement of the \$40 rate or pension.

In cases of widows or remarried widows now on the roll and of at-tained age of 75 years no application of any kind, not even a letter, needs be filed by a pensioner for this in-crease of pension. In fact letters of retard the work of the Pension Bureau, and pensioners and their relatives or friends can materially assist in the expeditious handling of these cases by refraining from correspond-ing regarding them. It is hoped that all now on the pension roll, entitled to this \$40 rate, will have received notice to that effect prior to September 30, 1928. Pensioners not receiving notice by that date should then make inquiry regarding their cases. It is estimated that about 90,000

widows and remarried widows of Civ-War veterans have now attained the age of 75 years and are now en-titled to this \$40 rate. There are ap-proximately 175,000 Civil war widow pensioners on the roll whose cases must be drawn and examined to ascertain those now entitled to the increase of pension. These cases will be drawn in numerical order, handled as expeditiously as possible with the force available, and notices sent to the Disbursing Clerk of the Pension Bureau, authorizing payment at the increased rate. He will send these observe the mature is a spl

## WARNS TOURIST CAMPERS OF LURKING DANGERS.

The mushroom growth of camps and free camp sites has presented a definite sanitary problem to health of-States have efficiently solved it, in-cluding Pennsylvania, says Dr. Theo-dore B. Appel, secretary of health.

Nevertheless, a warning must be given to the thousands who, in re-sponse to the "call of the wild" and the "back to nature" urge, will soon take to the road, gypsy fashion.

take to the road, gypsy fashion. It is not enough to arrive some-where at the end of the day, erect tents for the night's stay, and assume that the health department has fully protected you. On the main highways, and even on the more traveled side roads, such is likely to be the case. In camps of this character, the water supply will carry the familiar yellow sign—Safe Drinking Water, the sani-tary facilities will be adequate and the cleanliness of the surroundings evident. evident.

However, there is a surprising number of camp sites that are to be found in more remote sections, many

of which, even if the road has been covered by the sanitary engineer, have come into existence after the survey has been made and conse-quently has been missed. It is a spot ike these that care and circumspection must be exercised.

The lure of such a camp is strong. The seclusion of a wooded tract "far from the maddening crowd" some-times overcomes all consideration of personal health. The motorist is so or avoid them. taken with the scenery and aloofness that he fails to give any thought to the water supply—the source of much of that disease which, by reason of its seasonal incidence, is known as sulting deaths. vacation typhoid.

Deep in the mountains, spring wat er is likely to be entirely safe, but when using such a source, investigate the immediate neighborhood for possibilities of infection. It may knock crease of pension. In fact letters of a bit of romance and poetry out of inquiry about particular cases will the situation but what is the lack of a little of that compared with the typhoid bacillus which may be awaiting a chance to infect you?

The following rules are the guidance of those more adventurous spir-its who spurn established camps or the approved camp site:

your water supply. If a spring, see to it that contaminating factors are absent; if a stream, then invariably boil the drinking water. A drop of tincture of iodine may be added to every pint of water in lieu of boiling. Others may have polluted it, and contrary to a popular notion, water does not purify itself in every eight miles. 2. Do not throw any garbage or refuse into a stream, open well or spring-bury or burn it.

 Bury body eliminations.
 Avoid mosquito infested areas.
 Leave the camp site in a neat and sanitary condition. There are others who will likely follow you. Make Back to nature is a splendid idea. France, Germany, Holland, Belgium

and Sweden, Sir George said.

New Reports Show Auto Death Toll. Much of this trouble, he says, is due to the use of improper type plug or spark plug points being set too far apart, or because the plugs are

Forty-five million tooth brushes are annually used in the United States. This is a large number of brushes in-deed, but it is scarcely enough to This is a large number of brushes in-deed, but it is scarcely enough to care for the teeth of one hundred and ten million people, said Dr. Theodore B. Appel, Secretary of Health, recently. With the plans now being complet-ed for Dental Health week, the cel-ebration of which will be coincident with the Child Health celebration the first week in May, this subject is par-

first week in May, this subject is par-

ticularly timely. Fortunately the State-wide inter-est in child welfare will direct the attention of parents to the necessity of proper oral hygiene for the young people. This important prophylactic and preventive measure cannot be over-emphasized. The first and second sets of teeth need regular supervi-sion and daily attention. It is much easier for a dentist to fill little holes than big ones, it doesn't take as long, it doesn't cost as much and it doesn't hurt as badly. Moreover, to march the children to the dentist's twice a the children to the dentist's twice a year is to practice real economy, as it insures the efficient functioning of teeth that otherwise would likely fall down on their job. This is eloquently proved by the fact that seventy per cent of all school children have tooth defects which are usually due to poor dist on account of home bygione or diet, on account of home hygiene or the direct neglect of the teeth.

So much for the children. Now, how about you? Are you, the par-ent, brushing your teeth three times daily? Are you religiously visiting your dentist twice every year? If, through the disregard of these things, the worst that could happen to you would be false teeth, it would be bad enough. Just ask some person who owns a set if you do not believe this! But there is a more possible calamity attributable to neglect than that. Here are some of the diseases which may be caused by hed tacth, metric

may be caused by bad teeth: gastric ulcers, kidney infections, rheumatism, neuritis and heart disease-a rather high penalty to pay for your criminal indifference to dental attention. Therefore, be over-solicitous con-

cerning your children's teeth, but in the process don't forget your own. Make Dental Health week a family celebration for health and life's sake!

Tuberculosis is both preventable and curable. We can guard ourselves from tuberculosis by maintaining good health, which increases our natural immunity. We can guard against in-fection by avoiding contact with per-sons having the disease and who are careless in exposing others. There is no specific for tuberculosis.

There is no drug which alone will affect its course, nor has a serum or vaccine been produced which will con-trol it. The cure of the disease resolves itself into the upbuilding of the individual and improving his general health, so that the natural immunity
