**STATE COLLEGE COOKS ELECTRICALLY**  
... here is why!

**There's no waste in electric cooking**

According to actual practical tests, there is about twenty per cent less shrinkage when food is cooked electrically. The reason is simple! The electric oven is so thoroughly sealed that very little evaporation takes place. All the nourishing juices are retained in meats and the valuable mineral contents in vegetables.

Check over the butcher's and grocer's bills and see for yourself how important this saving would be in your budget. In most cases, it means that every member of the family will have an extra dollar to spend every month.

Electric cooking saves your time, too! Home economists figure that the woman who uses an electric range has at least ten hours more of leisure time every month. And ten hours of your time is worth far more than a few dollars in money.

Ask any friend who owns an electric range about how economical of time, effort and money it is. Or let our office tell you how you can cook this most modern way... and save. Cook electrically for economy.
