

Tomorrow is the date for the continued hearing before referee Lee Francis Lybarger on the question of fees for the attorneys for the State receivers of the Centre County Banking company.

Altoona Booster Merchants Say:
We Invite You to Come to Booster Stores for the Needs Your Home Merchants Cannot Supply.

Attend the Special
Match Race
AT THE
Altoona Speedway
Saturday
October 11

This is a specially arranged match race between Billy Arnold, American Automobile Association Champion and winner of Altoona's Labor Day Classic, and "Deacon" Litz, the DuBois "Speed Star" and "runner up" in the 200 mile Labor Day Classic. This match race has been arranged to settle a discussion that arose after the Labor Day Classic and to determine which man is the better driver. Because of the high standing of both drivers in the realm of automobile racing, this match race will have more thrills than a regular 200 mile classic.

20 Semi-Professional Drivers Will Race

As an additional attraction, races have been arranged between a field of 20 Semi-professional drivers, all of whom will make an effort to hang up a record. The Preliminaries will start at 10 A. M. The Match Race will start at 2 P. M. If you want a real thrill, arrange to come to this Altoona Speedway Race on Saturday.

You Can Always Shop With Satisfaction In Altoona Booster Stores

Of utmost importance is the fact that Booster Stores offer unlimited variety from which to make selections in goods of dependable quality and attractive styles. Next in importance are the very reasonable prices that prevail in Booster Stores, and which appeal to thrifty people. The desire to render courteous service is a strong characteristic of Booster Stores salespeople and is an added reason why you can always shop in Booster Stores with entire satisfaction.

Every Wednesday IS Suburban Day

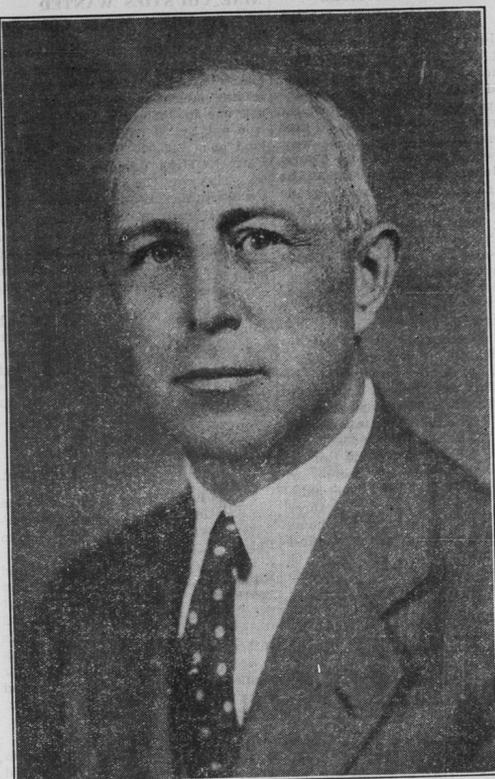

IN
Altoona Booster Stores
Arrange to shop in Booster Stores each Wednesday and share in the Special Attractions that are always a feature of Suburban Day. Stocks of Fall and Winter goods are now complete. A good time to make selections for both personal and home requirements!

for Member of The Assembly

These Men will Vote to Repeal the Obnoxious Tax Law that Scott and Holmes Voted For.

FOR AND ABOUT WOMEN

A man's no bigger than the way he treats his fellowman! This standard has his measure been since time itself began! He's measured by his justice, right, His fairness at his play, His squareness in all dealings made, His honest, upright way, These are his measures, ever near To serve him when they can; For man's no bigger than the way He treats his fellow man!

Paris reports show us these things:

First—that Paris designers, like American designers, insist on individuality. But a wearable individuality, not eccentric individuality. An Empire silhouette, for instance, is no longer just a copy of the old Empire silhouette. Because, though individual, it is hard for many figures to wear.

But the new Empire silhouette has been modified and made wearable for modern figures. As Molyneux and Poiret did it. And as hundreds of American designers are doing it.

Second—Paris reports show that the Parisian silhouette for fall is one of long normal waistline. And that's the favored American silhouette, as you know.

Third—that a Paris costume must have interesting details. And that, too, is an outstanding mark of new fall modes in America.

What are some of these details? Are they the same on both sides of the ocean? Let's see.

If you've been looking at fall coats you've noticed that most of them feature a silhouette with a wide wrap-over. And very often these widely wrapped coats are belted, aren't they?

That wrapped, belted coat was a favorite model in the recent showings of Vionnet (who originally designed it), Lelong, Lanvin, Paquin and Regny.

What's one of the most in fashion new fall dresses in America? Yes—the tunic dress. With either long or short tunic.

Tunics and peplums (and the peplum, you know, is really a short tunic).

"What's in Fashion?" has already told you that Persian lamb would be one of the most-in-fashion furs on coats this winter. And if you've been looking at coats, you know this is so.

They're still using lingerie collars and cuffs in Paris as well as America. They're a becoming fashion and designers are taking full advantage of that fact.

Flounces and tiers are still a favorite evening fashion in Paris. Button trimmings on coats and dresses are popular. Draped collars—those flattering soft effects about the neckline—were featured everywhere.

There's a new fashion in this country—one you'll see more of as the weather gets colder—that's an important fashion in Paris. That's the hip-length fur jacket.

eries, they hang even with the bottom of the skirt. And the smartest 1930 hemlines are much better to look at. Their trimming details are most interesting. Not fussy, though. But more feminine. More individual.

Instead of a plain, straight sleeve, an interesting cuff is put on. Or bows or incrustations may be used. Instead of the plain neckline—a becoming bit of lingerie trimming, a touch of contrasting color, or an interestingly draped color.

Pleats, seaming, tucking and draping are used on skirts, bodices and sleeves. And they take away that bare, hard look dresses had for so long.

We said that skirts are longer this fall than last. How long? Well, fashionable women settled that question this past spring and summer. And they're not making much change.

For general daytime wear, skirts reach to middle calf—the roundest part of the leg.

For informal daytime wear (and this includes some of the more tailored as well as spectators sports costumes) the upper calf length is best liked.

For active sports wear the fashionable length is about two inches below the knees. And for formal evening wear, ankle length—a graceful length that shows the toe of the shoe in front and the heel in back.

If you have any old heirloom bracelets dig them out. Wear them on your left arm, just above the elbow, with puff sleeves or no sleeves at all above them.

Recipe for pickled onions: 4 quarts small white onions; 1 cup salt; 2 quarts vinegar; 2 cups sugar; 1/4 cup mixed pickle slices.

Peel onions under water, add salt and let stand over night. Place in colander, pour plenty cold water over to rinse and let drain. Tie spices in thin bag. Boil with sugar and vinegar, throw in onions, let boil up and pour at once to over-flowing, into air tight bottles or jars.

A dozen jars of this Combination Fruit Conserve would add infinitely to the beauty of your pantry shelves: 2 pounds peaches, 1 pound quinces, 1 pound pears, a cup nut meats, 1 pound apples, 2 lemons, sugar.

PENN STATE STARTS ON SEVENTY-FIFTH YEAR

Seventy-fifth anniversary year opened Wednesday at the Pennsylvania State College with a capacity enrollment of over 4200 students welcomed at convocation by president Ralph D. Hetzel.

Three new academic buildings, a new power plant and many improvements in landscaping of the campus combined with the record enrollment to make the record the most important in the history of the college since the first class started in 1859, four years after the institutional charter was granted in 1855. In less than three years twelve new buildings have been added to the college plant from funds provided by the State, alumni and friends, each a replacement of worn out or overcrowded structures.

In opening exercises in recreation hall president Hetzel described the worth of the new facilities and called upon students to live up to the increased educational service value they represent to the State of Pennsylvania and the nation. He declared the new freshman class the best prepared ever to enter Penn State. It was learned that almost 2500 Pennsylvania boys and girls sought admission to Penn State this year, but only 1225 four-year course students could be admitted, including 50 who started the forestry

FARM NOTES.

Every day except Saturdays and Sundays weather reports and timely news items are broadcast from W P S C at the Pennsylvania State College, promptly at 12 o'clock noon. The station operates on 1230 kilocycles and 500 watts.

As a result of the dry weather and its effect on the corn crop, seed corn will be a highly valuable product next spring. Good care of old corn and all new corn that can be used for seed will be a profitable procedure for any farmer.

The general business depression has extended to the market for logs and lumber. Prices are low and there is little movement in this line. The best practice now includes letting valuable trees stand or cutting only after sale has been contracted.

Cows need vacations the same as human beings. A rest period of 6 to 8 weeks before freshening, with plenty of good feed, will put the dairy cow in form for her winter's work.

Use of lights has postponed and often entirely eliminated the fall moult in pullet flocks.

It is especially important that late planted wheat be treated with copper carbonate dust to protect it from the ravages of stinking smut.

In considering emergency hay crops for next year it is well to remember that oats, wheat, soybeans, and other crops can be used. Using this year's meadows for hay again next year is another possibility, even if it does upset the rotation. In most cases a heavy yield can be expected if the field is fertilized early in the spring.

Spray celery every 10 to 14 days with 4-4-50 bordeaux mixture to control late blight, as the cool fall weather promotes the development of this disease.

A warm poultryhouse that will help to keep egg production high during the winter months must be well ventilated, says Prof. E. R. Gross, agricultural engineer at the New Jersey experiment station, New Brunswick.

To maintain a warm, well-ventilated henhouse three things are needed, advises Professor Gross: Tight walls, doors, and windows; ventilating flues, which may be constructed of wood at a low cost, and limited overhead space. To make the building tight, close all the cracks, cover the outside walls with roll roofing, or cell the inside walls. Reduce the air space by ceiling overhead or by constructing a straw loft.

Ventilation and warmth go together. If the house is tightly built and has all doors and windows closed, the birds will give off heat enough to raise the inside temperature considerably above that on the outside. But when the house is tightly closed, moisture will begin to accumulate and the air become stale. Ventilation is needed, therefore, to carry away the moisture and to bring in fresh air.

Compounding the ration of the laying hen, particular attention should be paid to the inclusion of the necessary vitamins. Yellow corn and green feeds, alfalfa meal,

alfalfa leaf flour and others. Vitamin D, or its equivalent, is supplied by making use of direct sunshine or by resorting to cod liver oil, the latter being an outstanding source of this most essential substance.

Clean and fresh ground may be made available by moving the house or houses to new ground each year, or by having a regular rotation of sown crops.

Sanitary ground is particularly necessary in the handling of all chicks and growing stock. All poultry runs should be disced and planted with oats, rye, wheat or similar crops. Discing or plowing once a year is not sufficient for best results.

Poor pruning of grapes is only one of the factors that affect ripening, but it is a very important one. The leaving of too little fruiting wood will, on the other hand, induce a rank growth of foliage accompanied by a light crop of fruit. In such cases the crop may be further reduced by the resultant shade which furnishes a greater opportunity for the germination of black rot spores, which is one of the most destructive diseases of grapes.

Grinding of any feed does not increase the food value of that feed. A bulky roughage ground to a fine pulp does not make a concentrate out of it. Successful dairymen thoroughly understand this fact in feeding their dairy cattle. Neither the cow nor the grinder is a thing of magic capable of using a roughage as a concentrate or making a concentrate of a roughage.

In grinding feed for the dairy cows recommended steps to follow are:

To let the cost of grinding govern the amount of roughage grinding done;

To not feed ground roughage as a concentrate;

To grind small grain for dairy cows but not to a meal; and

To not grind small grain for baby calves.

Cattle cannot use vitamin D in cod liver oil as demonstrated at the University of Wisconsin. Cows dropped in milk and fat production when the oil was added to the ration and increased production when it was removed.

Alfalfa hay exposed three hours to bright sunlight at Madison, Wisconsin, was not sufficiently supplied with vitamin D to enable cows, giving 40 to 50 pounds milk daily, to keep up the lime content of their systems. An exposure of three days of bright sunlight at Madison gave good results in maintaining body lime as cows lost about a third of the amount they were losing previously. The cows were on a ration of hay, silage and grain mixture.
