Mrs. Bruce Meyer, of Spring Mills, was admitted to the hospital on Wednesday of last week as a surgical patient, and died the following day. Randolph Stine, of Patton township, was discharged on last Thursday, after undergoing surgical treat-

ment. Mrs. William Osman and infant son, of Bellefonte, were discharged

on Thursday. Fred Coslo, seven-year-old son of Mrs. Anna Coslo, of Spring township, was discharged last Thursday.

George Soltis, two months-old son of Mrs. Nellie Soltis, of Clarence, died in the hospital last Thursday, and Steve, twin brother, died on Sunday.

Mrs. Guy Corman, of State College, was admitted on Friday as a medical patient.

Mr. and Mrs. Earl Musser, of Bellefonte, are the happy parents of an infant daughter, born in the

Odd Prescription That "Cured" African Native

Some Varieties of Insects Can Walk on Water

Certain insects known as water skaters, skippers or striders move about on water as freely as other insects move on hard surfaces. Some spiders are able to do the same thing. It is the so-called "surface film" that provides the resisting surface necessary to support the weight of the insects. The surface of a liquid acts very much as if it were covered with an elastic film like a thin rubber membrane. An ordinary sewing needle, if thoroughly dry, will float when laid carefully on the surface of water in a basin, notwithstanding the density of steel is about eight times greater than that of water. A thin aluminum disk will act in a similar manner. The needle bears down the surface of the water, yet does not break through it, because the weight of the needle is not as great as the force exerted upon it by the tendency of the depressed liquid surface to straighten out. If the needle is wet it will sink because the water will rise around it instead of being depressed by it. On the other hand, if the needle is first dipped in oil it will float more readily. The grease prevents the water from wetting the needle much as oil prevents the feathers of a duck from getting wet. The feet and legs of insects that travel on the surface of water are covered thickly with minute Westminster abbey, according to

hairs which retain a filling of air. This air depresses the surface film and acts like a coating of oil over which the water does not flow because it does not break the film. An insect with smooth legs and feet would puncture the film and be helpless on the surface of water. Only small creatures whose weight alone is not sufficient to rupture the surface film can be supported by this neans .- Pathfinder Magazine.

Why Bureau Road Chief

Urges Tree Planting

Planting of suitable trees and shrubbery along all highways of the federal-aid system, where such growth can be maintained, should be regarded as a necessary step in the improvement of the system, says Thomas H. MacDonald, chief of the bureau of public roads of the United States De partment of Agriculture.

"Too little attention has been given to the appearance of our highways, and in this respect our roads are inferior to those of Europe," MacDonald said. "People seeking pleasure and recreation by travel are the greatest users of the highways, and to them a pleasing roadside means as much as a smooth surface and easy grades."

has an area of about 3,000 square However, he says, the Department miles and a population of 1,500,000. of Agriculture does not encourage the making of expenditures for the plantproximity to the "Itaku-Ehima," or ing of trees and shrubbery when to do so would mean the deferment of more necessary improvement, nor does it urge the employment of federal-aid funds if the states prefer to depend on their own revenues.

historic, is commemorated today by

There are modernists even anyong the witch-doctors of Africa, to judge by the story told by a missionary on furlough about the native who was upon the Salt lake valley. "This is the place; drive on," said Brigham treated with powdered gramophone record mixed with water from a locomotive-the engine water to make him move and the record dust to make him talk. In its own way the treatment is not illogical-and it embodies an obvious compliment to the white

man's capacity for "big ju-ju." It is water that makes the engine move and the record which makes the gramophone talk-the only flaw in the argument is that the patient was neither a phonograph nor a locomotive. However, he recovered the use of his limbs and tongue-so simple faith must have once more proved its superiority to that nasty, know-all spirit, by failing to perceive the fallacy on which the treatment was based.

One would like to know that witchdoctor's recipe for deafness. Probably he gives his patients a strong infusion of the telephone directory .--Manchester (Eng.) Guardian.

hospital last Friday.

Mrs. Peter Mangino, of Bellefonte, was admitted on Friday for surgical treatment.

George L. Seibert, of Yeagertown, was admitted on Saturday for surgical treatment and discharged the following day.

Mrs. Harvey Finkle and infant daughter, of Spring Mills, were discharged on Sunday.

Mildred G. Billett, six-months-old daughter of Mr. and Mrs. Chester Billett, of Coleville, was discharged on Sunday after undergoing medical treatment.

Mrs. Cecil Gross, of Howard, was discharged on Sunday after undergoing medical treatment.

Miss Laura Beckwith, of Tyrone, a student nurse at the hospital, who had been undergoing medical treatment, returned to duty on Sunday. Mrs. O. G. Morgan, of Bellefonte. was admitted on Sunday as a surgical patient.

There were 46 patients in the hospital at the beginning of this week.

"STRICTLY DISHONORABLE" IN PITTSBURGH NEXT WEEK.

Brock Pemberton's widely-discussed comedy, "Strictly Dishonorable," longest run play of Broadway's hit of the 1929-30 season, will be given at the Nixon Theatre, Pittsburgh, the week beginning Monday evening, November 10.

The cast selected and directed in New York by Antoinette Parry and Mr. Pemberton, includes many notables of the stage and screen: Flo-belle Fairbanks, Lino Manzoni, Lee Baker, Ralph Locke, George Meeker, Jerome Daley, Guido Alexander and John Robb.

An adroitly written comedy, with shrewd character drawings and the atmospheric touches of a Gotham speakeasy in the "wet 40's," the play is now in its second year in New York, and, because of its deft handling in writing and direction, its wealth of alert and intelligent humor, intriguing romance and sprightly buoyancy, the comedy was last season unanimously selected by Gotham critics as "one of the year's ten best plays,' was awarded the coveted Roi Cooper McGrue prize and has taken its place as a worthy and lasting contribution to the theatre.

A romantic tenor of the operatic stage, an innocent but naively adventurous girl from Mississippi, an over-bearing and dictatorial lover from a small town, a judge who is given to friendly imbibing during ex-officio moments and a wisecracking policeman give mainspring to the play's action.

The company to be seen here is enroute to an engagement in London. "Strictly Dishonorable" is the most

cospicuous success in the long list of hits produced by Mr. Pemberton, a native of Kansas and graduate of the University of Kansas.

Why Paint Is Important

Although the location and style of architecture are, naturally, the first things planned by the prospective home builder, one of the most important factors in home construction is paint, and painting work.

Not only does paint give the finishing touch of beauty, but its preserve 'ive quality is of vital significance. Most painting difficulties are found to be caused by moisture, not necessarily on the surface, but within the wood itself. Consequently the structure must be permitted to thoroughly dry before the priming coat is applied. If this coat is thin enough it will give permanent protection to the wood and, at the same time, allow the sun to draw the moisture to the su'

face. The best procedure is to apply a priming coat as soon as weather conditions are favorable. Delay and exposure will cause weathering if the surfaces are long neglected.

Why Fish Bite

American Forests and Forest Life says that contentiousness, water temperature, the angler's skill, tempting bait and sheer perversity as well as appetite cause fish to decide whether to bite or not to bite. The pugnacity of some species cause them to strike at objects that get in their way. Feeding is governed to a great extent by temperature changes, and it is well known that fish are more or less inactive when the water temperature is low, requiring little food at such times. During the winter months they take practically no food.

Why Uncle Sam Studies Iron Industries, universities and technical schools, bureaus of the United States government, scientific organizations and foreign agencies are aiding in the research in alloys of iron to keep America abreast of world progress and industry.

Why Rubber Hose Is Used

Rubber hose connections are used in the automobile cooling system because vibration and motion would cause leaks if metal unions were employed. Flexibility is necessary.

Why "Artesian" Wells

Artesian wells are so named from the province of Artois, in France. where one of the first flowing wells in that country was discovered.

Parrish, The chief temple dates from the year 587 and the island, which is largely inhabited by priests and their attendants, is visited annually by thousands of pilgrims. The soil is never tilled, so that all provisions have to be brought from surrounding districts.

Inca Civilization

There are few more colorful stories in history than that of the Inca civilization, with all of its strengths and shortcomings, which was wiped out by the Spanish conquerors. Writers have placed upon it a glamor which it did not deserve and on the other hand have failed to recognize the truly substantial contributions made by these peaceful, intelligent mountain Indians to human progress. In some respects they were far behind the white men ruthlessly murdered them. In who some respects they were far ahead. Unfortunately they left no written records. Everything to be learned about them must be learned with ax, spade and pick.

Macedonian Industries

The United States chief import from Greece is, strange to say, Turkish tobacco. Small-leaf tobacco of the Near East was raised in Macedonia when that region was still Turkish, but the production has been greatly increased with the coming of Armenian refugees. These newcomers, many of whom were settled in Macedonia, knew all about raising tobacco, so their efforts have made Kavala a famous tobacco port. Refugees have also introduced the silk-raising industry, as well as rug weaving and cigarette making.

No Alpenstock for Her

Mrs. Newrich was describing her travels to an envious audience. "And have you been in South Amer-

ica?" somebody inquired. "Many times," said Mrs. Newrich, rather bored. "In fact, I know it from

end to end." "Then, of course, you went up the Amazon?"

"No! As a matter of fact, I didn't," said Mrs. Newrich, "but my husband went to the top. You know I never did care for climbing."-Cincinnati Christian Advocate.

Keep It Numb

One evening at the dinner table Jerry's father was discussing business matters with Jerry's mother. Suddenly he turned to Jerry. "What we've just been talking about is a secret," he said. "Can you keep a secret, Jerry?" "Sure," answered Jerry. "I never told mother about you breaking her vase last week. did 1?"
