Democratic Matchman. Bellefonte, Pa., May 27, 1932.

Your Health THE FIRST CONCERN.

THE MOSQUITO

The insect family, Culicidae, has been fully considered in Bulletin 21 10:30 A. M. Annual Meeting-Alumni of the State Department of Health, Commonwearth of Pennsylvania, March 1911, but presentation 11:00 A. M.-Alumni Election of Trustof the following metnods to prevent development in the various stages seems advisable in this Bulletin. The campaign against mosquitoes should really be begun in Winter, as at this time the hipernating species are found in houses. 'Thorough screening of the house with netting or wire screens having 18 to 20 meshes to the inch, will keep the mosquitoes from getting indoors. Should mosquitoes get in through the opening of doors and windows, or through imperfect screening or absence of screens, their numbers can be reduced by the use of a paddle made of an oolong sheet of wire gauze, tacked onto a strip of wood of suitable size to serve as a handle. Daily persistence in this practice will destroy them all. In order to destroy them in the house, either in winter or in summer, the mixture of carbolic acid crystals and gum camphor which is described under the subject of the House Fly, will be found effectual.

In large cellars several portions should be prepared at the same time, in order to secure equal distribution of the vapor and equal effect throughout the cellar. The smoke from smoldering pyrenthum paralyz-and Commencement Speaker, es the insect but does not kill and as the stupefied insects are difficult to find, this is but a palliative measure.

The burning of jimson weed (stramonium) and saltpetre is rec-ommended. The space to be rid of mosquitoes must be tightly closed so that no fumes can escape for two hours. Three parts of powdered jimson weed mixed with one part of saltpetre is spread in a layer onehalf inch thick, on a tin sufficiently large to hold all the mixture necessary or several tins may be employed. The powder is then lighted in several places and the fumes will shortly penetrate the 1,000 cubic feet of air space.

The mosquitoes found on the ceilings of bed-rooms in the evening may quickly be killed by means of a shallow tin cup or jelly-glass covernailed to the end of a stick moistened inside with kerosene. This is placed under the mosquito which either falls into or flies against the oil and is killed. Mosquitoes may be repelled by the burning of Chinese punk and by the less desirable application of equal parts of olive oil and oil of citronella to head, face, hands and ankles every half hour or so. Carrying napthaline or tar camphor in the pockets is also of some use in keeping mosquitoes from the person. In case one is bitten by mosquitoes the best antidotal application is a diluted solution of amber water applied to the bite as soon as possible. However, the most satisfactory means of fighting these careless motorists, however, contin-insects are those directed to the de-ued to drive these sections at exstruction of the larvae and abatement of the breeding places. Since the mosquito does not fly more than one-half mile from its breeding-place and apparently only rarely as far as this, it is practically the road. possible for any locality to free itself by bringing about a crusade against the mosquito within its own territory and for one-half mile around the same. The transference of mosquitoes by winds over long distances may occur and can not be prevented. Many and sometimes all of the most extensive mosquito breeding areas in or around cities and towns or in a given locality, are so situated stances. that in the course of local improvement they will be done away with through grading of drainage. In the meantime such places are both nuisances and menaces to health; hence every effort should be made to have areas drained or filled in, as the condition may demand, as soon as possible. Should filling in be necessary, much can be accomplished by securing the cooperation of all parties who have ashes or dirt to dispose of and of diverting this material to the mosquito breeding areas to be filled. When the filling in is started the material should be delivered so that the edge of the pool will be the first portion to disappear under the filler. Further material should be added in such a way that the entire pool will be obliterated in the shortest possible be time, which means that the material is to be spread out to such a depth that there will be no chance for pools to form. Until such prmanent abolition can be secured, kerosene (one ounce to every fifteen square feet of surface) should be applied. In this proportion all larvae and pupae will be effectually destroyed, with the additional advantage of killing the females when they alight to deposit. eggs. Usually, an application should be made once each month, though its more frequent use may be advisable under certain conditions. It is trained voices. more evenly distributed if placed in the water a short distance from the Barrels for rain water, if not er must be engaged and tenants shore line. screened and if provided with outlets must be directed either to remove at the bottom, may also be treated all standing water or to screen it so with kerosene. All standing water completely with cheese cloth or other material that mosquitoes will be ef-In order to more completely do fectively kept from getting at the away with the mosquito breeding standing water.

The annual commencement at the Pennsylvania State College will be held June 3rd to 6th, inclusive, and an elaborate program has been arranged, as follows:

FRIDAY, JUNE 3

12:00 Noon .- Trustee Election by Delegates-Luncheon and meeting, Nittany Lion Inn

HOMESPUN : SENSE : ETHICS OF BANKING

By MELVIN A. TRAYLOR President First National Bank, Chicago

We must not take unfair advantage of our competitors. It

tors and that will Melvin A. Traylor in any way aid to

Sentiment in Banking

No sentiment in banking? Will you recall just one day's activity at your desk-what were the problems you considered? Did they apply solely to the cold-blooded conduct of the affairs of your bank, weighing, measuring, analyzing, valuing securities, extending credit, driving the best bargains possible, having in mind only the material return from your day's labor? Certainly such is not the case. I recall many days-happy days, too-in my experience in a very small country bank, in which I am sure not one-tenth of my time was given to the real consideration of the financial returns to my institution.

. . .

Open Markets

I believe in an open market for the actual purchase and sale both of commodities and securities. But so long as the actual rate for credit in this country swings up and down according to the demand for funds for speculative purposes, little influenced by central or other banking policy, then something is wrong somewhere. Moreover, if business is influenced-as is almost universally charged - by the state of public mind; and if the state of public mind is influenced, as in recent years it most certainly has been, to run the scale from extreme optim.sm to extreme pessimism according to the characters on a ticker tape, then something is wrong with the public mind, or the conduct of the forces back of

the tape. Those responsible must pro-

Lejeune Got "Thriller" After War Was Over

When General Lejeune was asked to relate his most thrilling war experience he smiled and said: "It did not come in the war, but

after it, when the troops of occupation were passing through Belgium. We were given a wonderful reception and in one city I was on the platform and had to make a speech. When I had finished our chaplain arose and to my amazement and horror announced that Mile. Clementine, the famous dancer who was traveling with me, would entertain with some

of her inimitable dances. is entirely proper "And how she danced, while I sat for us by legitimate there in horror, knowing that my rep means to obtain all rtation was ruined beyond repair. the business that

"Imagine, then, my relief when, we can, but in doing at the end of the dance, Mile Clemenso we ought to do tine removed a very pretentious wig nothing that will and I recognized the close-cropped injure our competiblack head and smiling countenance of my very masculine soldier-cook and the chaplain explained the joke to the

audience "'Ah,'" I exclaimed jumping to my feet, "'if he only could cook as well as he dances war would almost he a pleasure."

Big Surprise in Store

for That Unknown Girl Cleveland girl on her vacation, and traveling on the railroad for the first time in her life, was startled when the waiter in the dining car remarked:

"You haven't ridden with us lately, nave you?"

She didn't bother to tell him he had the wrong person. He continued: "What has become of that girl that

ased to travel with you?" "Oh," said the imaginative Cleveand girl, "haven't you heard? Why, she went to Europe and married an English nobleman with millions."

"Why." he returned, "I thought she was married already !"

"She was," the girl returned, glibly, "but her husband eloped with a movie actress, so she divorced him." And she calmly ordered dessert, and

save herself up to pleasant reflections as to what would happen when the unknown girl boarded the train one of these days .-- Oleveland Plain Dealer.

Record Group of Statesmen

Elson says: "An abler body of statesmen has not assembled in modern times than that which made our Constitution in 1787, nor has any assembly met with truer motives, or produced a grander result. The whole number of delegates was 55, and there was scarcely a man among them who had not been distinguished in the state or in the field, who had not been a governor, a member of congress, or a commander in the army. A few had served in the Stamp Act congress in 1765, others had set their names to trimming, so that from every standthe immortal Declaration in 1776, and one had framed the plan of union at Albany in 1754. Could these men have looked into the future they would have seen two of their own number become Presidents of the United States, one a Vice President and many others foreign ministers, members of the Supreme court, cabinet officials and United States senators."

FOR AND ABOUT WOMEN

DAILY THOUGHT

They say depression is due to the vanity of the rich, the envy of the poor and Exchange. the greed of the merchants .- Ignace Paderewski, pianist and ex-premier of Poland.

-Good news for warm weather. Smart hair is shorter. Not man-short-as it was when

boyish dresses were the fashion. Just short enough to make neat rolls or flat curls in the back. Neater, simpler confures are the thing. Loose, blowy carls straggling down at the nape of the neck are

out. But just what to do with hair? Well, listen to Theodore, coiffure to many New York fashionables (and Helen Chandler and Claudette Col-

bert when they're in town). "Cut the back to about an inch or at most an inch and a half long," says he. (That's long enough for the new, flat, "sculptured" curls that Paris and Ina Claire are wearing or

ness of thinning-out underneath.)

"And, of course," he'll tell you, "hair must be arranged particularly well on the left side since most hats tilt to the right."

If you have a piquant Helen Chandler kind of face, perhaps, like her, you'll want your ears to show. According to Theodore, she likes her coiffure changed often but always wants her ears exposed. Claudette Colbert, on the other hand, has the same coiffure week

after week,-two deep dips on the right and one to the left. Simple coiffures are best unless

you have plenty of time (and money) to spend on hair dressing. But for special occasions the sculptured curls plastered close to the head are smart. Or a whole line of soft little curls running straight up the back of the head.

If your features are regular enough and not too round, hair brushed straight and smoothly back with just the ends curled up is new and different. Carole Lombard wears hers that way. A bang is a new-fashioned idea lots of girls are taking to when they have too high foreheads. It's newer than the usual dipped wave.

-There was a prediction last year by one of the best known furriers

in Paris that the animal kingdom was going to be skinned in a big way for the winter of 1932, begin-ning about October. "As a matter of fact." says this authority, "the need for economizing has proved to many women that a fur coat which, if cared for properly, will last sometimes as long as six years is a much wiser investment than the cloth coat fur-trimmed which supplanted the seasons, but fur coat for a few which is seldom good for more than two years at best. Furthermore, when a fur coat is no longer wearable as a long coat, it can be made into a jacket or else can be used as

"Excessive speeding immediately after the application of bituminous materials to our highways has caused considerable loss to the department for years past," S. S. Lewis, secretary of highways, states, "and I will immediately take steps to

overcome this loss." During 1931 a system of warning users of the highways that oil would be applied to certain high-ways within a limited time was inaugurated by Secretary Lewis. The public appreciating this innovation of being warned in advance avoided a great many sections immediately after the oil had been placed. Many cessive speeds with the result that bituminous materials and chips were thrown from the road and many other cars were discolored and dent-

ed by these materials flying from Secretary Lewis stated that he

intends to erect barricades at the beginning of operations and warn motorists that they must slow down while traveling those sections of the road which have been oiled.

If the highway department is un-successful in eliminating this loss and motorists continue to disregard these instructions it may be necessary to block off the road entirely causing lengthy detours in many in-

"I believe that a large percentage of the motorists will be pleased to accede to our requests that they slow down while passing over the sec-tions which have been immediately oiled," Lewis said.

COLLEGE WILL BE HOST TO FARMERS JUNE NINTH

New and interesting developments bearing upon farming and home making, will be displayed to farmers and their families when they meet at the Pennsylvania State College, Thursday, June 9, for the annual Farmer's Field Day.

Conducted tours through the College farms, orchards, gardens, barns, experimental plots and gardens will

e part of the day's program. Staff members in agricultural engineering, agronomy, animal hus-bandry, dairy husbandry, forestry, fruit culture, ornamental gardening and plan breeding, and home economics will present programs. There also will be agricultural economics

and etomology exhibits. An entertainment program of group, quartet and solo numbers, piano-accordion selections, and comedy features will be furnished in the evening by the Pnnsylvania Railroad Altoona works male chorus of 50

the cooperation of every household-

Doors in Ancient Times

Judging by lack of doors in the great temples of Nineveh, Babylon and Ephesus, also the Parthenon, there is an impression that all the buildings of ancient Greece and Rome were doorless. In Pompeli and the Lateran basilica, as well as several of the temples, is proof, however, that single doors, double doors, and even sliding doors were used in these early times. But it is true that skins, linen veils, tapestries, and silk curtains protected the doorways of many dwelings then as they still do in some parts of the East to insure privacy for the inhabitants.

Burying Ground for Pets

A beautiful plot of ground near Murphy, N. C., is dotted with comparatively expensive marble and granite tombstones to mark the final resting place of animal and bird pets of residents in this vicinity during the last forty years. Among the inmates are owls, cats, monkeys, dogs, squirrels, parrots, bantams and a peacock. Many of the graves are dotted with two mounds, telling the story of the inability of one mate to live long without the other.

Star Nearest the Earth

The nearest fixed star is Alpha Cen tauri, whose estimated distance is 25,-000,000,000,000 miles. At the rate of 186,400 miles a second its light requires four years and 128 days to reach the earth, while sound would take more than 3,000,000 years. It is said that an express train starting from the star and moving uninterruptedly at a uniform velocity of 37 miles an hour, would not reach the earth in less than 75,000,000 years.

Queen "Pretty Thing" Found Dr. Selim Hassan found in the new ly discovered fourth pyramid at Gizeh, Egypt, the funeral chamber of "Pretty Thing." She is believed to have been the wife of the Pharaoh Khafra, the fourth king of the fourth dynasty, who ruled from 2867 to 2811 B. C. Investigations revealed an opening to the tomb large enough to enable a man to enter, and that robbers had removed all of the queen's mummy except the head.

Land-Locked Nations

There are 15 nations which have no seacoast. They are landlocked people. They become wholly insular in their thinking and living. They have not before them that boundless, living, restless, ever-changing immensity, symbolized by the sea, to touch their souls with the lust of adventure, the lure ways empty. His cup of sorrow is of the unknown, the magic of allen shores.

Nearest Planet

The relative sizes and distances of the planets have been explained by Sir Norman Lockyer by analogy. In accordance with this, the Sun is a globe 2 feet in diameter; Mercury, a grain of mustard seed, 164 feet away; Venus, a pea in an orbit of 284 feet; the Earth, a pea, 430 feet distant; Mars, a pin-head, 654 feet away; Jupiter, an orange, at a distance of half a mile; Saturn, a smaller orange, four-fifths of a mile away; Uranus, a small plum, one and a half miles away, and Neptune, a larger plum at a distance of two and a half miles .--Literary Digest.

Bugle Old Instrument

The origin of the bugle, in common with that of the hunting horn, is of the remotest antiquity, writes William C. White, United States army band leader, Sixteenth infantry, in the United States Recruiting News. Tubas, horns, cornets and bugles have as common archetype the horn of the ram, bull or other animal, whose form was copied and modified in bronze, wood, brass and silver. Of all these instruments, the bugle has in the highest degree retained the acoustic properties and the characteristic scale of the prototype, and is still put to the original use for giving military signals.

Soldiers Refused Votes

Many of the soldiers of the Revolutionary army never cast a ballot in the Republic they had helped establish, because of property qualifications required for voting. New York's constitution permitted no man to vote for governor who did not own land worth \$500 free of debt. In 1800 Tammany hall bought land for members to enable them to qualify for voting. The organization obtained a majority in the common council in this manner.

Regret

The man of regrets is almost invariably a fellow of flimsy texture. Continually bemoaning the fact that he has done the wrong thing, he shuffles through life a sad and pathetic performer. His hopes are alever full. Its ingredients are spilt milk and tears .- Kansas City Times.

noint it is both practical nomical.

-While the printed chiffon frock for afternoon and evening during the warm months has always been a classic, the ubiquituous cotton has invaded this field and we frequently see in the smart shops the lightweight printed cottons used in place of chiffon.

-One of the accessory points stressed in the mid-season collection in Paris was the tie-up between the hat band and belt on summer sport dresses. While the idea is not new, the material employed is. A number the important houses showed of velvet belts and hat bands with linen or pique dresses, and this is days, a new novel fashion touch. Black time. velvet on white dresses and hats appeared to be the most popular, and we can look for this new combination of both color and material for sport in our own summer fashions.

-The knitted wool jumper, the one that's just about ideal for golf when worn with a flannel skirt-can be had in solid colors or many col- 75-1-1yr.

ors Plaid or striped wools of light, loose weaves, featuring the bright Algerian shades of red, blue, green and yellow, make any costume as gay as you like it.

-While most jumpers either don't fasten at all or fasten straight in the front, some of them close way over at the left side. others are made like a man's waistcoat, in double-breasted effect, end-

ing in points below the waist. Some have round neck or square instead of the usual V-shape. And some are quite detailed, like the jumper originated by Goupy, Paris couturier.

This is an especially good type of jumper to choose if you're planning any kind of boat trip. It's a little warmer and more protective than the others. It's of flannel with con-

trasting belt. You'll find these jumpers useful, too, if you go in for riding or for camping or any sport where you wear trousers or breeches. They look fine, pulled over the tailored shirt and snugly belted.

-I wish that I had had this recipe when somebody asked me for ways of using stale cake some weeks ago:

To 1 cup fine stale cake crumbs add 1 cup choice raisins, 2 well-beaten eggs, a few grains of salt, 1-4 cup sugar, grated rind of 1 orange, and 2 cups milk. Mix well, and pour into a baking pan. Bake in a slow oven until firm in center, stirring a few times to prevent setting of raisins. Serve hot or cold with cream or any preferred sauce.

-Tie a little bow of bright-colorer ribbon on the handles of the scissors and they can be quickly found in the sewing basket.
