

BEDFORD INQUIRER.

Man Killed by a Woman in Defence of Her Husband.

From the Platte (Missouri) Argus of June 10. On Saturday night the City Marshal was aroused from bed to go to a house on the northern extremity of Leavenworth street.

Here was a horrible sight. Sitting up in bed was a man by the name Branham, his face bruised up, his shirt covered with blood, and his wife, a young, good-looking woman, in about twenty feet from the back door, in the garden, lay the dead body of Hugh Wilson, his features scarcely recognizable, his forehead smashed in, and the blood and brains oozing out profusely, a large and bloody club by his side, with which the woman, wife of Branham, said she had done the deed in defence of her husband. The plan story that the two told was that Wilson (intoxicated) had forced the lock of the back door, had jerked Branham out of bed and dragged him out into the garden. The wife flew to her husband's assistance with a club, and, by dint of well directed blows, made of Wilson the most horrible corpse one could well look on.

STATEMENT OF MRS. MARY BRANHAM.

Myself and husband had retired to bed, when some one broke into the house and came to the bed before we could get up. The man seized my husband and dragged him out, striking at and beating him. He called to me for help; said that the man was trying to wring off his neck. I could not get hold of any thing except a piece of board, the same now in court. With this I ran up to my husband, and found him down with a strong man resting on knee on his breast and striking him very severe blows. As I got in striking distance the man was making an attempt to wring off the neck of my husband, who seemed to be almost helpless. I immediately struck him with the stick, and did not cease until his hold upon my husband's head was relaxed. I struck him with nothing but the stick. My husband had been sick in bed for a week previous, and was almost as helpless as a child. I struck to save my husband's life, and believe he would have been killed in a few minutes if I had not struck.

DECISION OF THE JUSTICES.

"We the undersigned Justices, agree unanimously that the homicide committed by Mary Branham on Hugh Wilson was justifiable, and she is discharged from custody."

AN OCEAN TRIP IN A BALLOON.—J. Steiner, of Harrisburg, Pa., proposes to cross the Atlantic in a balloon, one hundred feet in diameter. He says in a letter to the Telegraph.

I am satisfied in my own mind that with such an apparatus I could cross the Atlantic in 75 hours, and the whole cost would not be more than \$20,000. The balloon, net and valves, would weigh about 2,000 pounds, and the boat and rigging 3 tons and a half—this will leave about 8 tons ascending power, for provisions, passengers and ballast. It would require three good ocean navigators, and one astronomer, besides myself. I would suggest N. York as the starting point, and an ocean I would strike within 200 miles of any given distance in Europe. I would suggest May as the time for making the experiment, and would make the attempt in 1859 if I could get the government or others to assist me.

MOUNT VESUVIUS.—The great eruption of Mount Vesuvius, noticed in the Vanderbilt's news, appears to have been foreboding since May last. There has been no flow of lava since 1855, the upper mountain having, been very quiet for some time. The first and most dreadful eruption of Vesuvius was in the year 79, when Pompeii and Herculaneum were buried in the burning lava, and more than a quarter of a million of human beings perished. In 1538 the town of Torre del Greco, then having four thousand inhabitants, was entirely destroyed, together with much of the surrounding country. There were also terrible eruptions in 1769, 1767, and in 1794, making the thirty-fifth since the time Pompeii was buried, and the second time that Torre del Greco was burned. At this time the top of the mountain fell in, leaving the crater nearly two miles in circumference. There have been several eruptions since, but none of the magnitude of the present.

A NICE QUESTION.—Some few weeks ago, the Fulton, Mo., Telegraph, having stated as a piece of news, that the Governor of Missouri, R. M. Stewart, had been flogged in a brawl at Jefferson city, by a man named Vandiver, the St. Louis Republican indignantly denied and denounced it as a scandalous lie. The officious defence of the Governor has proved rather unfortunate for him, as the editor of the Telegraph, feeling his honor at stake, has gone to work and fortified his veracity by proofs showing that the governor had really been flogged. Capt. Vandiver himself says that he "knew the Governor down, and named his licks upon him" (if any body knows what that means) but that, both of them being on a spree at the time, they made it up and parted as friends.—Dignified potentate, that Governor Stewart.

A RIGHTEOUS VERDICT.—At a recent term of the Federal Court of the United States, Pontotoc, Mississippi, the father of Nancy Wilson, of Virginia, a young lady of about sixteen years old, obtained a judgment of \$40,000 damages against Robert Wilson, of Mississippi, who was a married man, for deceiving his daughter away from home. It is said that the defendant has transferred his property, so that nothing can be made out of him, although at the time he committed the deed he was a wealthy man.—Memphis Bulletin.

SEVEN YEAR FLOODS.—The western waters were very high in '36 and '37. Seven years after, in '44, and in seven years again, in '51 and then again in '58 we have a great flood.—The superstitious can now exercise their talents upon the magical number seven. We are told that the Indians of the West held a tradition all of a seven year flood.—Louisville Journal.

Henry Brooks, the last surviving officer of the Kane Arctic Expedition, died at the Navy Yard, New York, on Tuesday, from sunstroke.

A slight shock of an earthquake was experienced by several parts of Connecticut, on Tuesday night a week, being the second in 200 years.

A HERD OF COWS IN THE AIR.—The recent whirlwind at, and in the vicinity of Coleville, Maryland, was the most singular phenomenon, according to accounts, we have ever read. The Rockville Journal says that there issued from a black smoke which darkened the atmosphere. One gentleman saw a herd of cows apparently up in the air, and there is every reason to believe that they were blown a quarter of a mile. It is said that the horizon was filled with fragments of clothes, shingles, linings, etc. It rushed on at this rate till it reached the Patuxent river, and there its course was suddenly arrested.

TELEGRAPHIC UNION OF FOUR CONTINENTS.—Should the Atlantic Telegraph be completed, Europe, Asia, Africa, and America will be brought into electric communication with each other, and a remarkable progress will have been made towards the civilized unity of the human race. From Newfoundland there is telegraphic communication with New Orleans, distant 3,710 miles, following the course of the wire, and when the Atlantic cable is laid, direct communication can be obtained with Constantinople thus uniting the four continents.

COMPLIMENTARY, BUT NOT PROFITABLE.—A Southern Methodist minister, detailing his experience on a certain circuit, counted twenty-six children that were saved after him, and added that during the year he received as compensation for his labors \$13.

'ANGELS' ON THE WING.—In the last thirty days no less than nineteen wives, flying from their husbands, have passed over the Buffalo and State Line railroad. So says a Buffalo paper.

See advertisement of Dr. Sanford's Liver Invigorator in another column.

THE MARKETS.

BALTIMORE, July 6. FLOUR.—The sales include 900 bbls. Ohio and 600 bbls. Howard Street Super at \$4.37; 100 bbls. Ohio Extra at \$4.62; 100 bbls. do. at \$4.75, and 100 bbls. very choice Howard Street do. at \$5.25 per bbl. Howard Street and Ohio Super closed steady at \$4.37, and we quote City Mills do. as before, at \$4.25 per bbl. There was, however, nothing done in the latter description. We quote Extra Flour today at \$4.62; \$4.75 for Ohio, \$4.75-\$5.25 for Howard Street, and \$5-\$5.25 per bbl. for City Mills.—Rye Flour may be quoted at \$3.37; \$3.50, and Corn Meal at \$3.25 for County \$3.50-\$3.75 per bbl. for City, and \$3.80 per bbl. for Brandywine.

GRAIN.—Grain continues inactive but for all descriptions prices are pretty well sustained. The receipts this morning included 5,000 bushels Wheat, 15,000 bushels Corn and about 10,000 bushels Oats. A part of the Wheat offered was of the new crop, and sales of some 700 bushels new white were reported at 126 1/2 cts. The parcels sold were of good quality and in fine order. We quote old Wheat as before at 100 1/2 cts. for red, and 112 1/2 cts. for white, the outside quotations being for prime lots. White Corn was rather dull this morning but yellow do. was in good demand and sold at 68-69 cts. for inferior, 73 cts. for good, and yellow at 76-77 cts. for good to prime.—There was no Rye at Market. We quote it nominal at 65-68 cts. for Maryland, and 73-74 cts. for Pennsylvania. Oats were very dull today and only a few of the lots offered were sold. We quote them at 27-33 cts. for common to good Virginia, 33-35 cts. for Maryland and 36-38 cts. for Penna.

DIED.

On the 21 inst., in the upper end of Friends Core, Mr. GEORGE MOCK, aged 68 years and 7 months.

On the 19th of May last, at the residence of her grandfather, R. Kurtz, in Bedford Tp., of scarlet rash, SARAH M. HULL, aged 11 years, 6 months and 19 days.

STOP AND LOOK

OSTER, MANSEPEAKER & CARN respectfully present their sincere thanks to their numerous friends and patrons, for their very kind and liberal patronage, since opening the

NEW STORE,

and respectfully beg leave to announce, that they are now receiving and opening the second supply of new

SUMMER GOODS,

embracing a large and attractive assortment of Staple and Fancy

DRY GOODS,

adapted to the present and approaching season, together with a general assortment of Groceries, Queensware, Cutlery, Hats, Caps and Bonnets,

BOOTS AND SHOES.

A large and varied assortment of D. Rodney King & Co.'s Philadelphia made, Ladies', Misses' and Children's fine Boots, Shoes, Gaiters, Slippers, &c.

Having purchased our goods at the very lowest possible cash prices, we are prepared to offer greater inducements than ever. Come in and see, and we will take great pleasure in showing our goods, whether you wish to buy or not. Bedford, July 9, 1858.—2m.

Bedford Springs.

THIS well-known and delightful summer Resort is now opened for the reception of visitors, and will be kept open until the 1st of October. The new and spacious Buildings erected last year are now fully completed, and the whole establishment has been furnished in superior style, and the accommodations will be of a character not excelled in any part of the United States.

TO INVALIDS.

Dr. Hardman, Analytical Physician. PHYSICIAN for diseases of the Lungs, Throat and Bronchitis, and all diseases of the Chest, and the CINCINNATI MARINE HOSPITAL, also to INVALIDS RETIRED.

Author of "Letters to Invalids," Editor of the "Medical Stethoscope," &c. AUGUST APPOINTMENT.

REDFORD, "WASHINGTON HOUSE," WEDNESDAY, AUGUST 11TH.

Dr. Hardman treats Consumption, Bronchitis, Asthma, Laryngitis, and all diseases of the throat and lungs, by medical Inhalation, lately used in the Brompton Hospital, London. The great point in the treatment of all human maladies is to get at the disease in the direct manner. All medicines are estimated by their action upon the organs requiring relief. This is the important fact upon which Inhalation is based. If the stomach is diseased we take medicine directly into the stomach. If the lungs are diseased, breathe or inhale medicated vapors directly into the lungs. Medicines are the antidotes to disease and should be applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate air cells and tubes which lie out of reach of every other medicinal agent. Medicines are applied to the very seat of disease. Inhalation is the application of this principle to the treatment of the lungs, for it gives us direct access to those intricate
