AUGUST APPOINTMENT. BEDFORD, "WASHINGTON HOUSE,"

# WEDNESDAY, AUGUST 11TH.

Dr. Hardman treats Consumption, Bronchitis, Asthma, Larryngittis, and all diseases of the throat and lungs, by medical Inhalation, lately used in the Bromton Hospital, London. The great point in the treatment of all human mahadies is to get at the disease in the direct manner. All medicines are estimated by their action are all the disease in the direct manner. All medicines are estimated by their action upon the organ re-quiring relief. This is the important fact upon which Inhalation is based. If the stomach is di-seased we take medicine directly into the stomach. If the lungs are diseased, breathe or inhale medi-cated vapors directly into the lungs. Medicines are the antidotes to disease and should be applied to the very seat of disease. Inhalation is the ap-plication of this principle to the treatment of the lungs, for it gives us direct access to those intri-cate air cells and tubes which lie out of reach of every other means of administering medicines. cate air cells and tubes which lie out of reach of every other means of administering medicines.— The reason that consumption, and other diseases of the lungs, have heretofore resisted all treatment has been because they had never been approached in a direct manner by medicine. They were intend-ed to a:t upon the lungs and yet were applied to the stomach. Their action was intended to be lo-cal, and yet they were so administered that they should act constitutionally, excending immediate and principal action upon the unoffending stemach, whilst the foul alcers within the lungs were unmo-lested. Inhalation brings the medicine in direct contact with the disease, without the disadvantage of any violent action. Its application is so sim-ple that it can be employed by the youngest infant or feeblest invalid. It dees not derange the sto-mach, or interfere in the least degree with the strength, confort, or business of the patient. OTHER DISEASES TREATED.—In relation to the following diseases, either when complicated with the affecting on activity and the interference of the sto-mach.
