farm, Garden & Household. MORE CATTLE WANTED.

With the price of beef at 18 cents by the carcass, and Porter house steak at 85 cents, it is quite evident that meat eaters in our cities want more cattle, and we think the farmers, both East and West, North and South, want them quite as much. Pork is the only cheap meat in the market, and that is rather owing to a short crop of corn and potatoes than to any surplus stock of swine in the than to any surplus stock of switch in the country. The great corn growing States of the West have been visited by a prolonged drought, diminishing that crop from twenty to forty per cent. Farmers having large stocks of hogs are not able to winter them, and are pressing them upon the market in a half fatted condition. This temporarily de presses the price of pork, but nothing occurs to make cheap beef steaks. The war has closed, and many things have fallen to quite reasonable prices. Cotton and wool are de-pressed, and clothing of these materials is receding toward ante-war prices. The mer-chant with a large stock of these goods on hand trembles in his shoes with anxiety to be rid of them. He is exceedingly accommodating both as to price and credit. But the butcher wears his white apron as stiffly as ever, and treats one as coolly as the season There is only so much stock in the marke and nobody can undersell him. The cattle trade is no doubt, very well regulated, and we hear of combination and speculation to regulate prices. This trade is so vast in bull and draws its supplies from so wide a territory, that it is hardly in the power of any man or any combination to keep up prices unusually for years as they have been since the war. The men who own cheap lands raise the cat the and sell to the men who graze and fatten them on better lands. These graziers, coming from all parts of the West, sell to the dro vers and forwarding merchants in the large Western cities. More of this business is done at the Chicago stock yards than at any other one point. Thousands of cattle and millions of money change hands in a day. It is an open market business, and the price is regula ha ted by demand and supply as in most other kinds of business. The shortest and best way to reduce the price of beef is to raise let more cattle, and this, we believe, will be quite as profitable for the producer as for the con

A mixed husbandry is, unquestionably, the best for the land and its owner in the long m run. The raising of cottor and tobacco it the South leaves old fields and deserted man-sions everywhere. The soil is recuperated only by expensive manuring or by a long rest in forest. Continual cropping, without retur-ning any thing to the soil, will make any reth gion desolate. The constant wheat and corn growing upon the new lands of the West is C steadily reducing their fertility, except on the river bottoms, where the annual overflow re-stores what is taken away. In many of these States the average yield of wheat is already reduced one half, and will sink still lower without a change of policy. We want to self from all our farms, East and West, more ani-mal products and less vegetable. At the present prices, and with good facilities, it will pay much better to sell beef, mutton, butter, and cheese, rather than bay and grain. As a rule we want to consume the great bulk of the vegetable crops upon the farm for the sake of improving the soil. If there is a good system of saving manures, the farmer can keep his hay and grain at home. He can raise fine stock to sell, horses, working cattle, sheep, beeves, butter, and cheese, fo these and other animal products imply an in crease in the stock of fertilizers and better field crops in the future. Some regions favorably situated for liming the laud and getting cheap manures, can afford to sell wheat, but these are exceptional cases. Selling grain, as a rule, is only selling one's farm by installments. The land is all the while growing poorer, and unless there are adventitious circumstances to give it value, its man ket price is diminishing. Land that will pro-duce thirty-five bushels of wheat to the acre is worth probably a bundred dollars an acre or more. Land that yields but ten would be dear at a quarter the price. Many a grain
