ee. And now he will do well to make up ish mind to one thing, and that is, never to cut off a limb without having first settled in his mind what he cuts it off for. If he thinks of cutting off a branch, first let him answer satisfactorily to himself, what do I propose to accomplish by removing this part of the tree? mes when he thinks that the removal of a branch will improve the general shape of the tree, let him bend the branch a little out of its natural place, so asto show how the tree would look if this limb were cut off, and if the esult is not satisfactory, don't cut it. There is a tendency with amateurs to trim too much Beware of this overdoing the matter. There was a time when excessive pruning was very fashionable, even among professional orchan dists, but they have learned better. The current of opinion is setting so strongly the other way now, that some are advocating no pruning at all. Probably this will be found as much the other extreme, and in due time we may expect the true mode to be settled upon. Peach trees have probably suffered nore than apple trees from over trimming. The best way for the beginner to exercise

his skill and taste is to confine himself almost entirely to reducing the general outline of his tree to the proper shape. Before beginning, he will do well to take a view of his tree, and decide how far it must be cut back to ensure a good, round top, and preserve the proper balance. Beginning at the most convenient point, and going round it with an eye to proportion and uniformity, he will come back to the place of beginning, at have the satis-'Oh, but Janet; do you not know that all
