# Farm, Garden & Household.

## SALT AS A FERTILIZER.

Why is it that we farmers differ so materially in their views as to the efficacy and economy of the application of common coarse salt as a manure?

Science and theory have long since clearly demonstrated that it must be beneficial under certain conditions, and in certain situations; practice demonstrates that it has been and is a profitable application under certain conditions and on some soils, when applied at certain intervals and times. Some of our best and most practical farmers have tried salt applied in various quantities, to various crops, with complete success; others, equally practical, have tried it, and after obtaining no benifit from it, condemn it as a humbug.

Fortunate it is for us, who expect to gain knowledge from the experience of others, that science and scientific agriculturists can reconcile these apparently opposite facts. Before proceeding further to the investigation into the cause of these failures, I wish to lay down four aioms, viz.: 1st, That the ashes left after the burning of a plant is composed of the inorganic part or soil-foot of the plant; 2d, That food or inorganic part can only be obtained from the soil, or through it by the application of some manure or fertilizer, 3d, That this inorganic food consists of from ten to twelve inorganic substances; 4th, That each species of plant, in order to secure a full crop, must have its proper amount in each substance, and will, no matter how may

HON. JOHN CESSNA.

(Subject to the decision of the District Conference.)

ADDITIONAL LAW JUDGE—accepting

COL. D. WAGNER, let us investigate

(Subject to the decision of the District Conference.)

the cases which led to these failures, all of which, had we a fair and exact analysis of the soil, could be accounted for.

We know that salt is composed mainly of chlorine and soda, both of which enter into the composition of all our early plants and grains. Now, soils may contain enough of both chloride and soda, in some other form to supply the wants of the plants, as for instance, chloride of lime or sulphate of soda. In this case, according to our fourth axiom, the application of salt would produce little or no sensible effect. If, on the other hand, the soil should contain too small a portion of chloride or soda to supply the wants of the plant, the aplication of salt would produce a good effect.

Some three or four years ago one of my neighbors concluded to try salt as a top-dressing for oats, and applied it broadcast before the drill the rate of two and one-half bushels per acre over nearly all his field, and found that it increased the grain both in yield and weight, and the straw was brighter, making better winter provender This satisfied him that salt was a good application for oats; and in order to see whether it was good for wheat, he gave the field another top-dressing of salt, at the rate of two and one-half busnels per acre. At harvest he could detect no difference between the crop on the portion to which the solt was applied, and that which had no other stimulant than farm-yard manure. He had made a great discovery, viz.: that salt was good for oats, but bad for wheat Such a conclusion is just the reverse of the fact as ascertained by careful experiment, for salt has always been found more beneficial to wheat than to oats. Perhaps your readers will ask, why then was it so in his case? Simply because he fell into the error, too common among those who apply concentrated manures or fertilizers; finding that one application was good, he concluded that another of the same substance would produce a like effect. We must remember that the amount of any one inorgaic substance removed by one single crop is comparatively small, hence one application may supply enough for the wants of several successive crops, and of course the second application would produce no effect untill the first was entirely exhausted. This is not only true with salt, but also of phosphate of lime, guano, &c.; but as these two stimulants contain a greater variety of inorganic matter, they do not so soon cease to show any apparent action of the crops. In many cases one dollar's worth of salt will produce a greater increase in the crop than two or three times this amount expended in some other inorganic manure.

There are other considerations which influence more or less the success or failure of an application common salt. We know that in the salt marshes near the sea-shore only particular cases of vegetation will flourish, showing that some particular products of the soil are more benefited by salt than others, and so it is with our cultivated crops, for although all of them contain a portion of the inorganic substances which compose common salt, yet some contain and require much larger amounts than others, and if the supply is not kept up will sooner exhaust the soil.

If common salt only benefited the crop by the direct inorganic food which it furnished, we could easily ascertain what crops would be most likely to be benefited by it; but the salt acts in other ways. If salt is applied to soil rich in other alkaline substances, it causes a change to take place among them, and thus benefits the crop without actually entering into the circulation of the plant.

In order to show the effect produced by common salt, I will make a few extracts from a list, containing the result of several experiments, which I have before me. When applied at the rate of one hundred and sixty pounds to wheat, it increased the yield of grain four hundred and seventy-two pounds per acre, at a cost of fifteen cents per bushel, and the grain weighed two pounds more per bushel. When applied to barley at the rate of three hundred pounds per acre, it increased the yield six and a half bushels per acre.

But these experiments must not be taken as a certain index of the action of salt upon these crops, for its effect upon different soils is by no means regular, and this effect can only be ascertained by experiment; but there are few soils which are not benefited by it.—*Cor. Germantown Telegraph.*

## ORCHARD AND NURSERY.

Shoots will push on old and young trees just where limbs are not wanted. Remember that the now tender shoot will soon be a hard woody branch. A slight rub will now remove it, but if left a year, the knife must be used. Rub off these shoots when young and save cutting hereafter.

Pruning may be done this month, especially if large limbs are to be removed. Cut the limb close to the one from which it starts and do not leave any stubs. Pare the wounds smooth, and brush them over with melted grafting wax.

Grafts will need looking to, and if two were inserted where one would be better, remove one of them. If some of the shoots on a graft are getting the advantage of the others pinch them back.

Budded Stocks will often push such vigorous shoots as to need stacking until they become strong.

Cultivation in the orchard has a twofold effect—it destroys the weeds, and leaves the surface in that light mellow condition which enables it to answer the purposes of a mulch. Young orchards, with crops between the rows should be cultivated with as much an eye to the trees as to the crops.

Mulching around newly planted trees should be put on before dry weather comes on. It is especially beneficial to cherries and other stone fruits.

Seed-Beds will need shading, as noted last month. Young evergreens will often rot or "damp off," without any manifest cause. Sprinkling fine sand or dry earth over the bed will often check it.

Nursery Stocks, intended for budding, should be kept in growing condition by good cultivation.

Thin the Fruit.—It is not often that this is done as thoroughly as it should be, and it is seldom that a tree bears a decent crop which would not have been better had half of the young fruit been removed.

Insects will demand attention this month. One great trouble with insects is that they are left too long without molestation, and most people do not notice their ravages until the mischief is done. Whoever loves trees will be frequently among them and observe the condition of each. A colony of caterpillars may often be disposed of in a few minutes which if left for a week, would prove a troublesome enemy.

Robers mostly lay their eggs this month; these are usually deposited on the bark of the tree near the ground, and the young grubs, when hatched, eat their way into the tree. Be sure that there are no grubs already in the tree, and some of the many preventives may be used. One of the most efficient of these is to wrap the trunk at the base with stiff paper, drawing away the earth around the tree and replacing it to cover the lower edge of the paper. We have already given other expedients.

Curculio is only effectually managed by jarring the trees and catching the insects. On large trees a limb may be sawn off, to leave a stub which may be struck with a wooden mallet, but small trees can be easily shaken by a sudden jar with the hand.

Powdered [illegible] on the leaves of this [illegible] pear and cherry trees is killed by dusting with air slacked lime; it is said on good authority that dry dust of any kind will answer the same purpose.

Plant-Lice, often troublesome on trees, are killed by the use of an infusion of tobacco or of quassia.—*American Agriculturist.*

# Humorous.

Why is kissing a girl like eating soup with a fork? Because you can't get enough.

Why is a spider a good correspondent? Because he drops a line by every post.

A boy being asked in Sunday school "What was the chief end of man?" answered "The end with the head on."

An old Indian who had witnessed the sale of whiskey for many years, said a barrel of whisky contained a thousand songs and fifty fights.

A Canadian Dutchman being advised to rub his limbs well with brandy for the rheumatism, said he had heard of the remedy, but added: "I dush better as dat I drinks de brandy, and den I rub my leg mit de bottle.

'Ven do you tink de world will come to an end?' asked a German. 'Oh, probably in about three months,' answered a joker 'Ho, vell; I no cares for dat,' exclaimed Hans, with a smile of satisfaction, 'I be going to Puffalo dis spring.'

A man had a recipe put up by an apothecary, and after he had gone the clerk discovered that he had passed a counterfeit twenty five cent piece and a five cent piece. He informed the boss. 'Never mind,' said the latter, "if the five cent bit be good there is still a profit of three cents.'

"How do they make horseradish?" said our little girl who had prepared that delicacy with sugar for dessert.

"It is a root which they grind up."

"Is?—well!—I always thought they made it out of saw-dust!"

A man who had filed a petition for a divorce was informed by his counsel that his wife had filed a "cross petition," as lawyers call it.

"A cross petition!" exclaimed the husband "that's just like her. She never did a good-natured thing in her life.

"A beautiful lady was kissing and caressing her beautiful lap dog; "ah Maria!" exclaimed her fopish adorer. "why not grant me the favors you are wasting on Fidele?"

"I don't kiss *every* puppy," replied the pouting fair.

Nobody likes to be nobody! but everybody is pleased to think himself somebody. And everybody is somebody, but when anybody thinks himself to be somebody, he generally thinks everybody else to be nobody.

Dandies, to make a greater show,
Wear coats stuck out with pad and pudding
But that you know is *a propos*—
For what's a goose without the stuffing?

Negro Ethics.—Fred. Douglass tells the following:

When he was a slave in Maryland he observed that an old negro, named Sandy, had the appearance of being always well fed, and looked very fat. He asked Sandy if he would explain how it happened so.

"Wal," says Sandy, "I steals it."

Douglass remonstrating on this point, Sandy, replied (pointing to a pig):

"D'ye see dat ere animal dare?"

"Yes."

"Wal, dat dare am massa's property, an' I am massa's property; derefore, put dat dare property into dis property, and it's all right."

Very small for its age.—A friend of ours was asked a few days ago, by a close fisted old customer to partake of some very old whiskey, which he valued very highly. He consented, not reluctantly, when his hospitable entertainer took the bottle and poured out what our friend regarded as a very small dose. The latter taking the glass and holding it above his head remarked rather skeptically—

"You say this is forty years old?"

"Yes," replied the host.

"Well, then," replied our friend, "all I have to say is that it's devilish small for its age."

The editor of the Religious Telescope objects to singing, by the choirs of churches, while talking up a collection in the church. He says: "We have sometimes seen brothers so absorbed in the singing during the collection, that, with their closed eyes, they could not see the basket as it was passed."

# Miscellaneous.

BRITISH PERIODICALS.

LONDON QUARTERLY REVIEW [Conser.]
EDINBURGH REVIEW [Whig.]
WESTMINISTER REVIEW [Radical.]
NORTH BRITISH REVIEW [Free-Church.]

AND

BLACKWOOD'S EDINBURGH MAGAZINE [Tory.]

These periodicals are ably sustained by the contributions of the best writers on Science, Religion and General Literature, and stand unrivalled in the world of letters. They are indispensable to the scholar and the professional man, and to every reading man, as they furnish a better record of the current literature of the day than can be obtained from any other source.

TERMS FOR 1867.

| | per annum |
|---|---|
| For any one of the Reviews | $4.00 |
| For any two of the Reviews | 7.00 " |
| For any three of the Reviews | 10.00 " |
| For all four of the Reviews | 12.00 " |
| For Blackwood's Magazine | 4.00 " |
| For Blackwood and any one Review | 7.00 " |
| For Blackwood and two of the Reviews | 10.00 " |
| For Blackwood and three of the Reviews | 13.00 " |
| For Blackwood and the four Reviews | 15.00 " |

CLUBS.

A discount of *twenty per cent.* will be allowed to clubs of four or more persons. Thus, four copies of Blackwood, or of one Review, will be sent to one address for $12.80. Four copies of the four. Reviews and Blackwood, for $48,00, and so on.

POSTAGE.

Subscribers should prepay by the quarter, at the office of delivery. The Postage to any part of the United States is *Two Cents* a number. This rate only applies to current subscriptions. For back numbers the the postage is double.

PREMIUMS TO NEW SUBSCRIBERS!

New subscribers to any two of the above periodicals for 1868 will be entitled to receive, gratis, any *one* of the "*Four Reviews*" for 1867. New subscribers to all five of the Periodicals for 1868, will receive, gratis, Blackwood, any *two* of the "*Four Reviews*" for 1867.

Subscribers may also obtain back numbers at the following reduced rates, viz:

The *North British* from January, 1863, to December, 1867 inclusive; the *Edinburg* and the *Westminster* from April, 1864, to December, 1867, inclusive, and the *London Quarterly* for the years 1855 and 1856, at the rate of $1.50 a year for each or any Review; also *Blackwood* for 1866, for $2.50.

☞ Neither premiums to Subscribers, nor discount to Clubs, nor reduced prices for back numbers, can be allowed, unless the money is remitted direct to the Publishers.

No premiums can be given to Clubs.

Price $7 for the two volumes—by Mail, post paid, $8. dec.21:

AGENTS WANTED FOR THE

OFFICIAL HISTORY OF THE WAR,

*Its Causes, Character, Conduct and Results.*

BY HON. ALEXANDER H. STEPHENS.

*A Book for all Sections and all Parties.*

This great work presents the only complete and impartial analysis of the Causes of the War yet published, and gives those interior lights and shadows of the great conflict only known to those high officers who watched the flood-tide of revolution from its fountain springs, and which were so accessible to Mr. Stephens from his position as second officer of the Confederacy.

To a public that has been surfeited with Apparently Similar Productions, we promise a change of fare; both agreeable and salutary, and an intellectual treat of the highest order. The Great American War has At Last found a historion worthy of its importance, and at whose hands it will receive that moderate, candid and impartial treatment which truth and justice so urgently demand.

The intense desire every where manifested to obtain this work, its Official character and ready sale, combined with an increased commission, make it the best subscription books ever published.

One Agent in Easton, Pa. reports 71 subscribers in three days.

One in Boston, Mass, 103 subscribers in four days.

One in Memphis, Tenn. 105 subscribers in five days.

Send for Circulars and see our terms and a full description of the work, with Press notices of advance sheets, &c.

GERMANTOWN TELEGRAPH.

A Family and an Agricultural Journal, devoted to choice Literature, including Poetry, Novelettes, Tales, and Moral and Entertaining Reading, generally. The Novelettes, Tales, Poetry, etc., shall be supplied from the best and highest sources, and be equal to anything to be found in any journal or magazine.

Agriculture and Horticulture, embracing Farming, Gardening, Fruit-Raising, etc. Our labors in this department for over thirty years, have met the cordial approbation of the public. Our purpose has been to furnish useful and reliable information upon these very important branches of industry. This portion of the *Germantown Telegraph* is alone worth the price of subscription.

News Department.—The same industry, care, and discrimination in gathering and preparing the stirring events of the day, expressly for this paper, which hitherto has been one of its marked features and given such universal satisfaction, will be continued with redoubled efforts to meet the increasing demands of the public.

Terms.—Two dollars and fifty cents per annum. No orders received without the cash, and all subscriptions stopped at the end of the time paid for. Specimen numbers sent. Address

PHILIP R. FREAS, Editor and Proprietor,
