GENTS WANTED FOR THE OFFICIAL HISTORY OF THE WAR,

Its Causes, Character, Conduct and Results.
BY HON. ALEXANDER H. STEPHENS.
A Book for all Sections and all Parties. A Book for all Sections and all Parties.

This great work presents the only complete and impartial analysis of the Causes of the War yet published, and gives those interior lights and shadows of the great conflict only known to those high officers who watched the fisod-tide of revolution from its fountain springs, and which were so accessible to Mr. Stephens from his position as second officer of the Confederacy.

To a public that has been surfeited with Apparently Similar Productions, we promise a change of fare; both agreeable and salutary, and an intellectual treat of the highest order. The Great American War has At Last found a historion worthy of its importance, and at whose hands it will receive that moderate, candid and impartial treatment which truth and justice so urgently demand.

THRASHING MACHINE!

Miscellaneous.

Farmers will please look at the great advantage in Thrashing Grain with GEISERS' PATENT SELF-REGULA-TING GRAIN SEPARATOR ING GRAIN SEPARATOR, CLEANER AND BAGGER. With the latest Improved Tripple-Geared Horse Power, driven either by Gear or Belt.

With the latest Improved Tripple-Geared Horse Power, driven either by Gear or Belt.

No. I is a eight-horse power, with cast iron thresher frame and wrought iron and wood cylinder, sixteen inches in diameter and thirty-three inches long. Trunk has ten inch rake crank and seven rakes is thirty-five inches wide, and delivers the straw on the score and thirty-five inches wide, and delivers the straw on the stope, and deliver it on the stack or, which will deliver about thirty five feet beyond the feeder, on a stack fifteen to eighteen feet high, and can be easily managed to carry the chaff with the straw, or deliver it in a separate place. The trunk and fan sides being closed, to confine the straw and chaff, remedies all difficulties in cleaning grain against windy weather. It bags the grain by reasonable management, sufficiently clean for market, and its capacity, under ordinary circumstances, is from twenty to forty bushels per hour, using eight horses and the same number of hands; but to force the work under favorable circumstance, it will thresh from forty to fifty bushels per hour, and with more case and agreeableness to hands than any other machine now in common use.

The No. 2 is particularly adapted to the farmer's use; in intending to apply to any common lever or railway power; weighs 1,300 pounds; has an iron threshers frame, and cylinder, 124 inches in diameter and 28 inches long; delivers the clean grain in bags, or if desired, in a half bushel. It delivers the straw fifteen feet from the feeder, or if desired, and eliver the straw and half together; will thresh and clean, in good grain, ready for market, from 100 to 175 bushels of wheat, or from 300 to 500 bushels of oats per day, using four or six horses, and the same number of hands; but to force the work, under mot farovable circumstances, good grain, &c., will thresh and clean all kinds of grain generally threshed with the common machine, and requires no more horse power, but in many cases does not run so hard. It will apply very weil to a two-hor

way power.

Now here is what the Farmer and thresherman

Because it is more convenient in the barn without the front carriage. You can turn the machine or run it from place to place more easily. Why has it not got Elevators like some other machines? Because the Elevators carry the fifth back alternately into the cleaner which must eventually go into the good wheat or in the chaff, and all know, that filth should be kept soparate for feed, &c., we might as well keep shoveling the Tailings from under our hand fan into the hopper and expect to get the grain clean. Why is this separator more cleaner and satisfactory to work about than others? Because the Fan and Trank Sides are closed up to prevent the wheat chaff and dust from coming out and scattering over the floor causing waist and giving much trouble with dir and sore eyes, &c. Why do Threshermen ge more work with these separators than they d with others? Because this separator has all the advantages and many more, which makes it separator suitable and a paying one for a farmers and Thrashermen that have grain thrash, whilst in most cases farmers must so themselves to the machine, because the machin will not suit itself to the farmer. In short, this the cheapest, most durable, reliably, simple a most agreeable to work about and the only separator that will clean and bag the grain sufficient clean for market under all circumstances.

Farmers can rest assured that this machine no humbug, and judging from the high recomendation of farmers that are using them, must come to the conclusion that it is the via Machine that farmers want and will have as standing the search as they have an opportunity to appreciate a steep that the search as a teep that we are search as a teep that a search as a teep that and the and as a teep that a search as a teep that and the and as a teep them, must come to the conclusion that it is the via the cheapest, most apportunity to appreciate a search was an entered the and as a teep that a search as BLOUSES,

2215, to \$540.

28 We warrant the machines to be as above epresented; also against any reasonable defects f material workmasship, &c.
