PATENTED OCTOBER 2, 1866. This situple, though effective machine is admit-ted by all scientific observers to be the mask direct device for gathering clover seed yet discovered. A more glance all it is sufficient to convince the most obtase united of its practical utility. It strips the clover head from the stalk leaving the straw standing upon the ground. It is easily in strips one horse, and requires but one man or toy to work it. It is compact, simple in structure, and not lis-the to act out of order, and can be clearly got up. The great advantage in this machine is, we have the seed gathered in the chaft, ready for the clover mill of huller, besides saying the great bireshing if from the straw. It will also pay ev-ory farmer to gather his seed which is loss in the old way of gathering. Extraording the state of great to coversate method when of gathering and of great in the old way of gathering. The great is loss in the old way of gathering. Extraording the state of the state of great to gathering the state of great advantage.
