

Farmer's Department.

Experiments in Growing Oats. AMONG the varieties of White Oats the three best are, the Surprise, Swedish and New Brunswick.

The Surprise is next, and the New Brunswick next. I believe this to be their relative standing, taking them on all kinds of soil.

One grain of Swedish produced 1200 grains; one grain of Surprise produced 1310 grains; one grain of New Brunswick produced 1390 grains.

These different varieties were all weighed and the grains counted, and planted on one kind of soil, and received the same treatment.

As far as the experiment was successful, however, it is plainly seen that the Swedish, Surprise and New Brunswick are the best white varieties.

I have seen it stated that the Norway and Surprise have yielded one hundred and fifty bushels per acre, and the other had farmers' names attached to them.

It is always the cheapest plan, though, to buy the best seed that can be had, even though the price is very high.

EARLY OR LATE PLANTING OF CORN? I believe that by early planting, say from the 4th to the 10th of May, the farmer is more certain of a good yield.

Although it is a general thing early planting is the little or nothing gained by it. It has always been my plan to plant early and drop an extra grain in each hill.

Just before planting time they are sorted over, and those having the smallest cobs in proportion to the length or depth of the grain, are selected for seed.

This may seem to some to be too much trouble, but rest assured that "it will pay" and that well.

I have proved by actual experiment that corn raised from seed taken from the middle of the ear will ripen from 10 to 15 days earlier than that taken from either end.

For The Young Folks.

ONE morning that they brought him his little roll for his breakfast, he had a fancy to go and cut it in the garden of the Palace.

He observed in an immense number of persons of both sexes magnificently dressed; they sang and danced, and fared sumptuously within the building; but all those who came out of it were pale, thin, covered with wounds, and nearly naked.

It was Zelle in the hands of four men, who dragged her towards the mansion, which they forced her to enter.

As far as the experiment was successful, however, it is plainly seen that the Swedish, Surprise and New Brunswick are the best white varieties.
