THE FARMER'S COLUMN. PIGS IN SUMMER. Summer is the time to make pork; making it in win eter is much like running a boat against wind and tide, it requires too much food to keep up the animal heat. If hogs have plenty of grass in summer, and about half the corn they will cat they will fatten rapidly; and my belief is that three pounds of pork can be made from less grain in this way than one pound can be in cold weather with a hog in a close pen. The grass is cooling and loosening, and counteracts the feverish properties of the corn. Hogs will never melt in summer however for if they can have access to water and mud to lie in. Mud is very bad for hogs in cool or cold weather. It absorbs too much animal heat. Milk is a very cooling drink and almost indispensable to raising young pigs. But very little corn and no corn meal should be fed to young pigs before they are four months The effects of corn and raw corn meal on young pigs are these: The pigs at first will be costive, then they will scour. They will begin to rub against everything they can rub against that will rub their hair off. Their skin will have a red and dry appearance. A dry, black scurf will begin to form on them; and the more of the corn and meal they cat, the poorer they will get. The best thing that can be done for : pig in this condition, is to give him a thorough washing in warm rain water or sour milk; sour milk is best. Coarse flour or middling from tye or wheat when made into a thin drinkable sion with milk, is the best feed for young pigs, except bread and milk. Bread is good for very young pigs, because it is leavened. Food has to ferment before it will digest, and if fed to a young pig before fermenting, it will overtask his stomach and spoil him. Lettuce is good for young pigs. It will stop the scours in them. The middlings should be put with the milk at night, after the feeding has been done, and allowed to be in the milk through the night, never allowing the swill tub to get quite empty, always leaving a little in the bottom for yeast. The swill should never be allowed to get stale. Slop feed should be fed often, and never more fed at a time than will be eaten up at once. Slop feed will make larger hogs than dry feed. After the pigs get to be three or four months old, their food can be made stronger, but a pig will not bear much strong food until he begins to change from a pig into a hog, which will be known by his voice. In the West, where hogs are raised on a large scale, but one litter should be raised from a sow in a year and the sow should have them in the month of May or June. The sows should run to grass, and may be fed on corn. The pigs should suck them as long as they will. In this way the pigs require but little care, and they get age so that they will winter well on corn. None but breeders should try to get more than one litter from a sow in a year. The fall litter will require too much care for the farmer. One litter can be got in April and another in September or October following, from one sow, but the spring pigs will have to be weaned from four to six weeks old, and fed on clear sour milk for two or three weeks after weaning, and fed of-ten. New milk once a day will kep them from scouring. Sour milk is better than new milk. New milk will first make the pig costive, then scour him. It will curdle in his stomach, but sour milk will not. The late fall pigs should dren to play with.

SOAP SUDS .- A cistern or tank, of the espacity of from two to four hogs- cd. They were fastened to a few new heads, should be constructed in the vicinity of the sink or laundry of every farm house, and a system of conductors so arranged as to lead the suds and slops into it as they are made. This liquid matter is a most powerfui

should be fed on warm slop feed, and

often. The slop can be warmed by

pouring hot water into the swill tub

A breeding sow should never befest much dry corn. She will get foundered on it

and spoiled .- American Stock Journal.

fertilizer, containing the food of plants sent to him after that should be fasten in a state of solution, and consequently in a condition to be readily taken up and absorbed by vegetables as soon as applied. Irrigating gardens with soap suds

after the liquid has become stale, is a whole pear tree was used for little woodpowerful means of promoting vegetable growth, especially in dry weather. Some have considered the value of such to be equal to that of the same weight of manure; this, however, is probably an exaggerated estimate; yet we want no additional corroboration to satisfy us of its intrinsic worth as a vegetable stimulant.

Great care should be observed that the decaying matter and suds do not taint the air about the dwelling, as in the process of fermentation and decomposition, sulphurated hydrogen gas is thrown off. This is an active poison. When inhaled it acts directly on the blood, thickening it and turning it black. A single gallon of it, mixed with 1,200 feet of air, will render it poisonous to birds, and one gallon in 100 will kill a dwellings,-New England Farmer.

Is WHITE CLOVER PASTURE GOOD FOR SHEEP.—Having kept sheep for six years, principally spon white clover, I can recommend it as being durable and affording about one-third more food than other grasses, and it will stand closer feeding, and sheep will do well on it. I have about ten acres that have, been seeded eighteen or twenty years It was sown with prairie grass, which is long since extinct, and the clover seed still flourishes, the ground has never been broken, and it has often been remarked that my pasture will sustain more stock than any pasture in the neighborhood. It also makes good hay for sheep. I mix white clover seed and sow for meadow; it sods over better and yields all of one third more per acre, and makes much better hay for sheep. I wintered sixty sheep on hay thus mixed without feeding any grain, and tost none after winter set in, and none are poor and weak. My lambs have needed but little care, their dams all being in good condition.

FOR COLIC IN HORSES,-Take a pint of whisky, half a gill of spirits of turpentine and half a gill of spirits of camphor. Dilute these ingredients in water sufficient to fill a quart bottle. Use it as a drench, and it will afford relief in the minutes.

Have some system about your advertisement, and let that be your shower it, then dig away at the people—KEEP AT IT and you will assurely get through the dull times and bring more custom than you can attend to, as that hoy went through the drift with his small shovel. of whisky, balf a gill of spirits of tur-

FOR THE YOUNG FOLKS.

Luck may Lie in a Pin. A Story Weitten for my Young American

Friends. BY HANS CHRISTIAN ANDERSEY. Now I am going to tell a story about

All of us are acquainted with luck there are those who see her all the time some only at certain times of the year others only one single day-yes, there are even people that only see luck once n their lifetime, but all of us do not see

I suppose I need not tell you that when our Lord sends a little child here, he lays in a mother's lap. This may happen in a rich man's eastle, or in a working-man's nicely ordered room. But then it may happen, instead, in an open market place, where the cold wind

But what not every one of you does know, and yet is really true, is that our Lord when he places a child here, also sends along with it its good luck, which, lowever, is never placed near by, but is hidden in some spot in our globe, where we look for it least; yet it is always found at last, and that is a com-

Luck was once placed in an apple; hat was for a man whose name was Newton. The apple feil, and thus he found his luck. If you do not know that story, ask some one to tell it to you. We have another story to tell-a story about a pear.

There once lived a poor man, who was born poor, and had grown up poor, and was poor when he married. He was a turner by trade and used to turn umbrella handles and umbrella rings. but he only carned enough money by this to live from hand to mouth.

"I shall never find my luck," said he. Now this is a true story which really appened. I could tell the name of the country and the place where the man ived, but that is of no consequence The red and sour mountain ash berries blossomed and ripened around his house and in his garden, as if they were the choicest fruit, and in the garden stood also the pear tree, but it nove had borne a pear, and yet their luck was placed in an invisible pear.

One night the wind blew terribly In Avize, men said the great Dillig boulder was lifted up from the side of the road, and thrown down like a lump of clay, and so it was not at all wonder ful that a big branch should have been broken from the pear tree. The branch was taken into the workshop, and the man turned out of it, just for fun, a big pear, and then several very small pears. "The tree shall bear pears once at east," he said, and gave them to his

children to play with. There are some things that are neces sities in life, and among these, most certainly in wet countries, are umbrellas, Now the whole family had only one for the general use. When the wind blew very hard, the unbrella would turn over: but the man quickly mended it again-that was in his trade. With the batton and string that kept the umbrella together, it went worse, it would always break too soon, just as one was

folding the umbrella up. One day when the button had broker again, and the man hunted in vain for it on the floor, he happened to get hold of one of the smallest pears which he had turned, and had given to the chilt find the button," said the

man,"but this little thing will answer." He pulled a small cord through it, and the little pear filled the place of the bro ken button beautifully; it was exactly right, and formed the best of fasteners. The next time that he had to send umbrella handles and rings to the capital, he added to the number a few of the small wooden pears which he had turnumbrellas which were sent with a thous and others to America. They have a quick understanding there of what is of use. The little pear was soon found to hold best, and the umbrella merchant gave orders that all the umbrellas to be ed with the little pear. Large orders were to be supplied, thousands of pears to be made; wooden pears on all umbrellas, and our man was kept busy at

en pears, which brought shillings that grew into dollars. "In that pear tree my luck was placed' said the man; and soon after he had a great workshop and plenty of men and boys to help him. Now he was all the time in good humor, and often used to

work. He turned and turned; the

say, "luck may lie in a pin." So also says he who tells the story; and you should know that it is true, and is a proverb in Denmark, that if you put a white pin in your mouth, you will be invisible, but it must be the right sort of a pin-one given by our Lord. I have had one of them; and whenever I come to America, the land of the New World, which is so far far off, yet so near me, I shall always carry that pin with me. I can send my greeting over in a few minutes; the ocean dog. Many of our good people are not sufficiently careful about allowing such blows; any day I can be there when "sinks of iniquity" to exist near their my stories are read, and perhaps see the glittering gold receive the ringing gold-the gold-the gold that is the best of all, which shines in eyes of children, and comes ringing from the lips of their parents. I am in the very room with my friends-and yet I am invisible.

have the white pin in my mouth. Yes, fuck may lie in a pin. After a great snow-storm, a little fellow began to shovel a path through a large snow-bank before his grandmother's door. He had nothing but a small shovel to work with.

"How do you expect to get through hat drift?" asked a man passing along. "By keeping AT FF," said the boy heerfully; "that's how!"

That is the secret of mastering almost every difficulty under the sun. If a hard task is before you, stick to it. Do not keep thinking how large or hard it is; but go at it, and little by little it will grow smaller and smaller, until it is done.

If you desire to impress the public that you have the best wares and the best prices, and are worthily entitled to their patronage, ADVERTISE YOURSELF. Do not expect to accomplish everything with one trial, nor two, nor three, but KEEP AT IT, and you will surely win.
