HOW TO CURE CONSUMPTION.

FARMER'S COLUMN.

THE YOUNG FOLKS.

Imme Around Apple Trees.

We have known some farmers make it a regular practice for a number of year, to throw caustic lime around their apple trees in the spring and summer.

We once noticed that a tree standing in the fundal at once put forth with renewed energy, and we were at a loss for some time to define the case. On examination we found that a quantity of lime, and applied half word would be found that a quantity of lime, and applied half is foot and around their rendered worthless by becoming mixed with the refuse on the stable door, had been thrown at the foot and around their reverse and renewed fractuation in or found that a quantity of light, and perhaps the way led with the refuse on the stable door, had been thrown at the foot and around their reverse and renewed rectaint and not reverse and to this, as the principle of reverse and to this, as the principle of reverse the foot and around the reverse and to this, as the principle of reverse the foot and around the reverse on the stable door, had been thrown at the foot and around the reverse and the reverse and to this, as the principle of reverse and to this, and yet and the present the foot and around the feed of the principle of the post in the stable.

Judge McCandless, of the United States District Court, rendered a decision a few days since declaring that every farmer who sells his own produce in market ought to have a United States license to do so. This subject has here- broken. tofore been agitated but never been enbeen made. We have a letter, however, from our Congressman, Mr. Packer, assuring us that the provision under which Judge McCandless has made the decision has been repealed in the tax bill now before the Senate, and that both houses have agreed to that section; hence the decision amounts to nothing and no tax will be levied on farmers who sell their own produce in market. -Harrisburg Telegraph,

Keeping Eggs. The chief requisite for keeping eggs is to place them on end; the smaller end down is preferred by most house-keepers. In order to effect this purpose imbed them in dry salt, by first making a layer in the bottom of the jar or other vessel, and then sitting the eggs with salt and make another layer, and so on till the jar is filled. When salt is used for this purpose, it is indispensable that it be kept in a dry apartment; for if it once becomes damp by attracting moisture, it will harden into a mass and the eggs cannot be reached without being chopped up by digging into the and the eggs cannot be reached without specified the salt. Outs answers the same purposenot so well as dry salt, but much better than moistened. The more uniform the very lightly." temperature and the cooler, so as not to

WHAT I KNOW ABOUT FARMING—AFTER GREELEY,—Turnips should never be pulled; it injures them. It is better to send a boy up and let him halfe the tree.

shake the tree.

The guano is a fine bird, but great care is necessary in rearing it. It should not be imported earlier than June or later than September. In the winter it should be kept in a warm place, where it can hatch out its young.

It is evident that we are to have a maid, and now swing to and fro. Sit yourself down there and wait until backward season for grain. Therefore it will be well for the farmer to begin set-ting out his cornstalks and planting his buckwheat cakes in July instead of "Oh, if that be all

huckwheat cakes in July instead of August.

The pumpkin is a favorite with the natives of New England, who prefer it to the gooseberry for the making of fruit-cake, and who likewise gave it the preference over the respherry for feeding cows, for being more filling and as fully satisfying. The pumpkin is the most esculent of the orange family that will thrive in the north, except the gourd and one or two varieties of the squash. But the custom of planting it in the front yard with the shrubbery is fast going out of vogue, for it is now generally conceded that the pumpkin, is a shad tree, is a failure.

"Oh, if that be all," answered the boy, "I can very easily do that! But if I learn so speedily what shivering is then you shall have my fifty dollars if you come again in the morning."

Then the boy went to the gallows, sat down and waited for evening, and as he felt cold he made a fire. But about midnight the wind blew so sharp that in spite of the fire, he could not keep himself warm. The wind blew the bodies against one another, so that they swung backwards and forwards, and he fire, how must they freeze above!"

. THE YOUNG FOLKS.

of the tree. Taking the hint from the accident we purchased twelve casks of listeners exclaimed, "Oh, it makes us time, and applied half a bushel to each shiver!" In a corner, meanwhile, sat of the trees in our orchard, and found the younger son, listening, but he could various functions. If they are neglected, Gravel that it produced immediate beneficial not comprehend what was said, and he or Dropsy may ensue. offects. Not the health of the trees onty, but the quality of the fruit was also makes us shiver, it makes us shiver!' greatly improved. This application but perhaps shivering is an art which I however slight may be the attack, it is sure to will be especially beneficial to soils cannot understand." One day, howev- affect the bodily health and mental powers, as where there is a redundancy of vegeta- er, his father said to him, "Do you hear ble matter. We would advise our you there in the corner?
