FARMER'S COLUMN.

Putting in Wheat.

The cause of one-half the failures of the wheat crop in various parts of our country, is attributable to the careless I say that such a system of farming gers or taught them good manners. will ruin the best lands on earth, and Now, in the spring-time a great many wheat," and his admirable teachings in gers." this respect should be followed as "higher law" by our farming commun-

duce a third more than wheat after any of the present day will deny. Therebe grown, it should by all means be sown as a preparation of the soil for wheat. Where it cannot be grown, actnal experiments with other crops will point out the unerring road to successful wheat culture, and when it is once ascertained what is best to cultivate as a preparation, in any particular soil or implicitly, and a less complaint will be heard at the harvest time.

In addition to the improper rotation of crops, the manner of putting in wheat has much to do with the success or failure of the crop. Why, I have often seen well to do farmers sowing wheat in standing corn, where the flat then following after with a one horse shovel plow! And this too, in October or November! Again, I have seen some men sow it down on oats or rye, or wheat stubble, and follow with a Carey plow or shovel! Some even sow it reasonably look for a half crop? We will not insult the American farmer by telling him at what time he should sow or the manner of putting it in, to insure that success which he should and would meet with, for we feel sure he knows already, and only hope he will do as well as he knows how to do .- Cor. Country Gentleman.

Oiling Farm Implements.

Every farmer should have a can of linseed oil and a brush on hand, and whenever he buys a new tool, he should soak it well with the oil and dry it by the fire or in the sun, before using. The wood by this treatment is toughened and strengthened, and rendered impervious to water. Wet a new hay-rake and when it dries it will begin to be loose in the joints; but if well oiled, the wet will have but slight effect. Shoyels and forks are preserved from chesking and cracking in the top of the handle by oiling: the wood becomes smooth as glass by use, and is far less liable to and hammer handles often break off part particularly should be toughened with oil, to secure durability. Olling the wood in the eye of the axe will prevent its swelling and shrinking, and sometimes getting toose. The tools on a large farm cost a large sum of money; they should be of the most approved kinds. It is a poor economy at the present extravagant prices of labor, to set men at work with ordinary, old-fashioned implements. Laborers should be required to return their tools to the convenient places provided for them; after using they should be put away clean and bright. The mouldboards of plows are apt to get rusty from one season to another, even if sheltered; they should be brushed over with a few drops of oil when put away and will then remain in good order till wanted .- Farm Journal.

A Discovery About Corn.

In this thinking and observant age, new ideas and discoveries are being constantly made known, many of which it is true, are never afterwards heard of, while others pass into the treasure of established facts, when their merit has been proven. We have just met with the following paragraph in an exchange:

"An intelligent and reliable neighbor of ours who has for many years been making experiments with corn, has discovered an importance and value in replanted corn which is quite novel, and worthy of publication. We have always thought that replanted corn was of very little consequence, but this gentleman says, 'it is of so much consequence that he replants whether it is needed or not -or rather, he plants two or three weeks after the corn is planted, a hill about every fifteenth row each way." He says: 'If the weather becomes dry during the filling time, the silk and tassel both becomes dry and dead. In this condition, if it should become sea sonable, the slik revives and renews its growth, but the tassel does not recover. Then, for want of pollen, the new silk is unable to fill the office for which it was designed. The pollen from the replanted corn is then ready to supply the silk, and the filling is completed.' He says nearly all the abortive ears so common in all corn crops is caused by the want of pollen, and that he has known ears to double their size on second fill-

MAGIC SOAP,-Ten pounds common bar scap, (10 cents per pound); three pounds soda ash or sal soda; one-half pound borax; three ounces liquid amonia; four gallons water; cut up the soap and put it in a boiler with the water. and heat it till dissolved, then put in the soda ash, borax and ammonia, and saw the poor Woman shivering outside, in a few minutes it is ready to turn out he said to her, "Come and warm yourinto jars. It will be almost hard soap when cold, and a piece of it dried will do to use as hard soap. About a pint of fore she was aware of it. The youth it we put into a boiler with four gallons water, and heat nearly to boiling, and wash the clothes in it.

A Missouri newspaper claims that the bogs of that State are so fat that in order to find out where their heads are it is necessary to make them squeal, and then judge by the sound.

THE YOUNG FOLKS.

The Sparrow and his four Children.

A Sparrow had four Young Ones in a swallow's nest, but, just as they were the Interior, and the Exterior. and improper way in which it is put in, fledged, some naughty boys discovered and the improper rotation of crops. A the nest and pushed the birds out : but man who follows oats with wheat, or happily a slight breeze was blowing at any other small grain, or who follows the time, and bore them up. But the wheat with wheat, does not deserve Old Sparrow was sorry because her tor is a conductor also, terminating in a single success, and is sure never to receive it. children were gone out into the world tube, and called the Ureter. The ureters are I know I utter a thrice-told tale, when before she had warned them of its dan-

never do any good; but it is a tale that sparrows chanced to meet together in a cannot be told too often for the good of field of corn, and among them the Old our whole country, and some farmers Sparrow happily met with his Young in particular. I do not here seek to Ones, and took them home with him in point out any new discovery of my great joy. "Ah! my dear children," own, but simply to inculcate lessons he said to them, "what a trouble I have which I have learned in the schools of been in about you all the summer, while observation and experience. We be- you faced the world without my advice, lieve it was that scientific agricultural- now hear my words, and attend to your ist, Voelcker, who wrote the admirable father, and take care of yourselves, for essay on "Clover as a preparation for little birds must needs meet great dan-

Thereupon he asked his eldest Young One where he had been during the sum-That wheat after clover will pro- mer, and how he had kept himself. "I have been in a garden," he replied, other crop, no intelligent agriculturalist "eating caterpillars and worms, till the our flesh and blood are supported from these cherries were ripe." "Ah! my dear fore we argue that whenever clover can son," replied the Old Bird, "bill-grubbing is not so bad, but there is great danger in it; therefore keep a good look-out, especially if people come into the garden carrying long green poles, which are nevertheless hollow and have a small hole at the top!"

"Yes, my dear father," replied the young Sparrow; "but what if a green climate, follow the teachings of nature leaf is stuck with wax over that little pelled from the bladder, but allowed to remain hole ?" "Where have you so seen it ?" it becomes feverish, and sediment forms. It is inquired the father. "In a merchant's from this deposit that the stone is formed, and garden," was the reply. "Oh! my son," gravel ensues, cried the Old Bird, "merchants are crafty people; truly you have been among the world's children, and have seen their cunning ways; take care now that you make a good use of what you tall grass and weeds were thick, and have learnt, and do not be too confiding."

Then he asked the second Young One chest, Hydrothorax, where he had been. "At court," he replied. "Sparrows and those sort of birds do not belong to such places as that," said the father, "at court there on land that has been broken up with is much gold, velvet, silk, armour, an indifferent two horse plow, and harness, and such birds as hawks, falbrush it in with a bush. Can such men cons, and owls. Do you keep to the tism, and gouty affections. Under this head we stables where they store the oats, or have arranged Dysuria, or difficulty and pain in thrash out the corn, and then you can passing water, Scanty Secretion, or small and satisfy your wants with a daily supply frequent discharges of water; Strangury, or of food." "Yes, father," said the son; stopping of water; Hematuria, or bloody urine; but if the boys weave their straw into Gout and Rheumatism of the kidneys, without knots and meshes, many a one may get anged by them." "Where have you seen that?" asked

the Old Bird. "At court, among the stable boys."

"Ah! my son, stable boys are bad boys! If you have been at court with the fine lords, and yet have left behind ositions, and all unnatural enlargements, as you no feathers, you have learnt care- well as pain and inflammation are reduced, and fully, and know how to behave your- it is taken by men, women, and children. Diself in the world: still keep a sharp rections for use and diet accompany, watch, for the wolves often eat the cleverest dogs."

"And where have you sought your living?" asked the Old Bird of his third Young One. "On the highways and byways I have turned over tubs and ropes, and so now and then I have happened upon corn and barley-seed." "That is, indeed, a fine subsistence,"

said the father: "but mind you observe blister the hand when long used. Axe the hedges, and see that no one bends down to pick up a stone ; for if so, it is advertised, I consulted with my family physitime for you to start."

"That is true," said the young Bird "but what if one should carry little pebbles in his bosom or pocket before vertised remedies, and had found them worthstone walls ?"

"Where have you seen that ?" "With the miners, dear father," he replied; "for when they travel about they carry with them secretly stones to throw at people."

"Oh, miners, working people, curious people they! If you have been among them you have seen and experienced a great deal."

At last the father came to the youngest son, and said, "Ah! my dear Cacklenestle, you were always the weakest and most foolish; do you stop with me, the world has so many wicked and rough birds with sharp beaks and long claws, who attack and devour all the little birds: keep you with me, and let the worms and spiders on the trees and ground near us content you."

"Ah! my dear father, he who finds his own living without injury to others, he fares well, and no hawk, owl, eagle, or falcon, shall harm him; for at all times, and every morning and evening he desires of God his daily food,-of God who is both the Creator and Protector of all the forest and village birds, and who also feeds the young ravens, and hears their cries, for without his will no sparrow nor starling falls to the ground."

"Where did you learn all this?" cried the Old Bird, astonished.

"When the breeze took me away, replied the Bird, "I came to a church, where I spent the summer in eating the flies and spiders off the windows, and there I heard the sermon preached, for the Father of all Sparrows nourished me through the summer, and kept me

from all misfortune and fierce birds!" "True, my dear son," said the Old Bird; "fly back to the church and keep the flies and the spiders from the win dows. Also forget not to chirp to God like the ravens, and pray to the Creator daily, and so you will keep well, were the whole world full of wild knavish birds: for he who commends his affairs to God, endures all, prays, and is gentle and kind, keeps his faith strictly, and his conscience clear, him God will ever protect and defend.".

The Old Beggar-Woman.

Once upon a time there was an old Woman, who begged as you may have seen other old women do; and when anybody gave her anything she would say, "God bless you!" Now this old Beggar-Woman went to a door, and before the fire stood a good-natured lad warming himself; and, as soon as he self." She went in; but going too near the fire, her old rags began to burn bestood and looked at her; but should he not have extinguished the fire? Certainly; and if he had no water at hand, he should have caused water to flow out of his eyes; and so two charming little streams would have been given!

WHY is a chairmaker like a schoolmaster? Because he canes bottoms.

HOW TO CURE CONSUMPTION.

THE PHILOSOPHY OF DR. SCHENCE'S GREAT MEDICINES.—Will people never learn to know that a diseased fiver and stomach necessarily disease the entire system? The pinines Principles of common sense teach this, and yet there are hundreds who ridicule the idea, and continue in the course which aimost incylably brings them prematurely to the grave. Living as the majorily of people do, at complete variance, with the laws of miture, it must be apparent to all that, sooner or later, nature will revenge herself. Hence we find that persons who indulge to excess in the use of very rich or lindgestible food or intoxicating drinks, invariably pay a leavy penalty in the coul. The stomach becomes disordered and refuses to act; the live fails to perform its functions, dayspepsia and its attendant evila follow, and still the suffering individuals persist in clinging to the thoroignity exploided itiess of the past. Dr. SCHENCE'S mail-times are recommended to all such. They being sure and certain relief wherever they are used as directed, and all that is necessary to establish their reputation with every siling man or woman in the land is a hair and imparisel trial trial characteristics and large and the production of the continued on this point and who have permitted interested persons to produce them, against these now celebrated features for Consumption, diseard their prejudices them against these now celebrated features and common sense. If the system is disordered depend upon it, in nine cases out of tothe send and inversor to cleanse and invigorable action, use

SCHENCE'S MANDRAKE PHLIS.—The daily self-on use

SCHENCK'S MANDRAKE PILLS.—The daily personsing demand for these pills is the best evi-SCHENCR'S MANDRAKE PILLS.—The daily increasing demand for these pills is the best evidence of their value. Thomsands upon thousands of boxes are sold daily. Why? Simply because they act promptly and efficiently. Invalids who may not find it convenient to call on Boctor SCHENCK in person are informed that foll and complete directions for use accompany each package of the MANDRAKE PILLS. PULMONIC SYRUP AND SEAWEED TONIC.—These medicines will care consumption unless the imags are so far gone that the patient is entirely beyond the reach of medical relief.

It may be asked by those who are not familiar with the virtues of these great remedies, "How sto Dr. SCHENCR'S medicines effect their wonderful cures of consumption?"

The answer is a simple one. They begin their work of restoration by bringing the stomech liver and bowels into an active healthy condition. It is food that cures this formidable disease. SCHENCR'S MANDRAKE PILLS act on the liver and stomach, promoting secretion, and removing the bile and slime which have result-

work of restoration by bringing the stometh liver and bawels into an active heatily condition. It is food that curse this formidable discusse. NIFENCK'S MANDRAKE PILLS act on the liver and stomach, promoting secretion, and removing the bile and slines which have resulted from the inactive or torpid condition of these organs, and or the system generally. This singgish state of the body, and the consequent accumulation of the unheatity substances named prevoid the proper digestion of food, and, as a natural consequence, creates disease, which results in prostration and finally in death.

SCHENCK'S PULIMONIC SYBLP and SEA-WEED TONIC, when taken regularly, mingle with the food, aid the digestive organs, make nood rich nicosi, and as a natural comequence, give fresh and strength to the patient. Let the faculty say what it may this is the only frue curs for consumption. Experience has proved it beyond the shadow of a doubt, and thousands are to-day alive and well who a few years since were regarded as hopeless cases, but who were induced to try by. SCHENCK'S remedies, and were restored to permanent health by their use. One of the first steps the physician should take with a consumptive patient is to invigorate the system. Now how is this tobe done? Certainly not by giving melleines that exhaust and conveyance medicines that impair instead of improve the first chairs of the digestive organs. Boofor SCHENCK'S medicines eleanesc the stomach and bowels of all ambstances which are calculated to irritate or weaken them. They create an appetite—promote healthful digestion—make good blood, and, as a consequence, they their ordering and the stomach held in the sease must be regarded as hopeless one.

If they by a stream which are diseased. If this cannot be done, then the case must be regarded as a hopeless one.

If they prove the make of good nourishing tood and comparty digest it, it is impossible to make a properly digest or make a properly digest or an appetite. A promote the stomach helden with undeathy stime.

Aimost th
