hand, but give it in a limp, flabby mannaw. These people seem to think they have discharged the whole duty of hand-shaking when they have put their neighbors in possession of their hands. Were it the custom to make our adjeu to a dear departed by shaking hands with his corpse, the sensation would no doubt be very like what we experience when we salute these flabby shakers who, as they use their hands much in the same way as the Meck Turtle uses his flaps, may be called Happers. These negative modes of shaking hands are disagreenble enough. But the positive seem to give so much offens? as that of the tippers and fingerers. More physically painful, though otherally less in-jurious, is the mode of those who squeeze. This mode is chiefly practiced by Methodists, by fervid preachers of evangelical persuasions, and by other persons of power and piety. Tor ments are sometimes suffered by smallbonded or rheumatic men, and by fragile women, who have fallen into the hands of one of these fervid giants, and who happen to have rings on their fingers when the cruel clutch is effected. But worse even than this class of squeeters is that of the clingers; the people who, having once got hold of your hand, refuse to let it go, but used it as they would a button hole, or as the An-clent Mariner used his glittering eye, to compel you to hear all they have to say; giving it at intervals little pressures, motions, or vibrations as a running accompaniment to their twaddle. Of all the kinds of shakers above described these clingers are most undoubtedly the most pestilential; and when, as is occasionally the case, they combine squeezing with clinging, they are simply unendurable, and ought to be treatsl as creatures that outrage society. There are very few people who do not him consider carefully, in one of his moments of deepest consciousness, his
