

Miscellaneous.

Epitaph on a Watchmaker. Here lies, in a horizontal position, the outside case of George Rungleigh, watchmaker, whose abilities in that line were an honor to his profession.

To his profession. Integrity and conscientiousness and produce the regulator. Of all the actions of his life, Humane, generous and liberal His hand never stopped.

Why are E and A like good people? Because they meet in heaven. Babies are described as coupons attached to the bonds of matrimony.

Why is the sun like a good loaf? Because it's light when it rises. CHICKENY—Palming off an old hen as a young chicken.

Why is a whisper like treason? Because it is not loud. The difference between a tale-bearer and sealing-wax is, that sealing-wax burns to keep a secret, and the tale-bearer burns to tell one.

An Iowa woman gave her husband morphine to cure him of chewing tobacco. It cured him, but she is doing her own spring cleaning.

"The proper study of mankind is man," says Pope; but the popular study is now to make money out of him.

"I say Pat what are you about, sweeping out the room?" "No," answered Pat, "I am sweeping out the dirt and leaving the room."

A Louisville man complained of marble table cloths at one of the restaurants. He said he didn't like to wipe his mouth with a tablecloth in the absence of a napkin.

Artificial Ice. Speaking of the ice works of the manufacturing company at Montgomery, Alabama, a correspondent of the Advertiser gives the following interesting account of the manner in which the ice is made.

The distilled water is put in tin cans thirty inches long, nine and a half inches wide and two and three-fourths inches thick, which leaves the ice in convenient shape for handling.

These cans are then placed in rows in tanks filled with salt water through of course the salt water does not come quite to the top of the cans so as to mix the distilled water which they contain, through iron pipes conduct the ether.

The ether extracts the caloric from the water which surrounds the tanks, thus equalizing the temperature, and bringing the whole below the freezing point, the distilled water freezing very readily, and the salt water being brought down several degrees colder than ice, yet without freezing.

The cans are taken out one at a time and dipped into a vat of hot water, which loosens the cake of ice, which then slips out, and the can is again filled and set in its place.

It is said to be much better than mercury; as the latter eats out copper pipes in a short time, and iron pipes in two years, while the latter does not effect the metals.

The cans are taken out one at a time and dipped into a vat of hot water, which loosens the cake of ice, which then slips out, and the can is again filled and set in its place.

PUBLIC REPORT OF A POLICEMAN.

I have not enjoyed good health for several years in which I have allowed it to interfere with my labor. Every one belonging to the laboring class knows the miserable condition of being almost alone with the body, from dizziness, almost reduced to perfect inability to do any work.

Especially among the aged class of people, it is a terrible affliction, and one which is often fatal. I was afflicted with it for several years, and was almost reduced to perfect inability to do any work.

I had heard of a medicine called "Violette," and I bought a bottle of it. I used it according to the directions, and in a few days I felt a great deal better.
