THE COLD MISELY WITH DEMOCRAT RECOMBRIDE COLDINARY CONTROL

Miscellaneous.

Don't Waste Vital Energy

The most vigorous persons do not have oo much vitality. People generally inherit a lack ; or at least find that much vital energy has been permanently lost in their childhood and youth, through the ignorance or carelessness of their parents. Often it is impaired by wrong indulgence in early man-hood. The endeavor with all persons should be to husband what is left, be it much or little. Therefore :

I. Don't do anything in a burry. Don't work too many hours a day, whether it be farm work, shop work, study 3. Den't abridge sleep. Get the full eight

hours of it, and that too, in a well-ventilated and sun purified room. 4. Don't eat what is judigestible, nor too

much of anything, and let good cheer rule 5. Don't fretat yourself or anybody else

6 Dun't be too much elated with good luck, or disheartened by bad,

Boys and Pistols.

'I never could understand,' the Dencon said, 'why a boy should carry a pistol. A pistol is a very peculiar fire arm : it is made for a very peculiar purpose. It is quite nat ural for some boys to want rifles or shot guns, with which they may kill game; but a ditol is intended to kill human beings, and this is about all it is good for. There are very few boys in this country who could shoot a bird or a rabbit with a pistol, as I any one who should go out hunting with a pistol would be laughed at. This being the case, why should a boy want a pistol? What human beings would be like to kill?

'It is uscless to say that he may need his pistol for purpose of defense. Not one boy in a thousand is 'ever placed in such a posi-tion that he need defend himself with a pistol. But it often has happened that boys would be a manly thing under certain circumstances, to use them, and yet, when the time came and they killed somebody, they only brought down misery on themselves and their families. And this, too, in many a case where, if no one present had had a pistol, the arfair would have passed off harm lessly and been soon forgotten.

But the way in which boys generally take human life with pistols is some accidental way. They do not kill highwaymen and robbers, but they kill their school-mates, or their brothers or their sisters, or, in many cases, themselves. There is no school where boys are taught to properly handle and carlearn these things by long practice. And, while they are learning, it is very likely that some one will be shot. I saw in a news paper, not long ago, accounts of three fatal accidents, all of which happened on the same day, from careless use of fire arms. And one of these dreadful mishaps was oc-casioned by a lad who carried a loaded pistol in his overcoat pocket, and who careless-

'And then, again, a boy ought to be ashamed to carry a pistol, especially a loaded one. The possession of such a thing is a proof that he expects to go among vicious people. If he goes into good society and honest, manly fellows for his companions, he will not need a pistol. A loaded pistol in a boy's pocket is not only useless and dangerous, but also it almost stamps him as a bad boy, or one who wishes to asscoiate with bad boys and victous men .-'Jack in the Pulpit,' St. Nicholas for Febru

Wonderful Feat of Memory

One of the most remarkable feats of mem ory is not recorded in the books, though it came before the public in a singular manner in January, 1847. At Sydney, Austral is, a prisoner set up for [defence on trial as alibi, claiming to have been at the time that the complainant was robbed at home in his own but listening to the recital of Horace Walpole's novel, 'The Old Baron,'which 2 man named Lane had, with other novels, committed to memory, the matter of time being disposed of by the declaration that Lane's recitation took two hours and a half. ally those kept for breeding. Some of them The Attorney General declared that this was incredible, whereupon Lane clearing his throat, began: In the time of King Henry crucl to keep animals tied up or shut up for throat, began : In the time of King Henry when the good Duke Humphrey returned from the Wars in the Holy Land, where he had been sojourning for a number of years there lived'—and had recited several pages when the Attorney General told him to stop-he was quite satisfied. But the counsel for the defence was not, and insisted that as the veracity of his witness had been questioned the witness should be allowed to set himself right, also as to time by reciting the whole novel. 'Do you expect me to take a sloven will fodder on the ground. Good it ail down as evidence?' stammered the racks should be made for the sake of conven Chief Justice, in great dismay, and finally a jence and economy. compromise was arrived at and Lane wave a chapter from the middle of the story and its conclusion. The prisoner was acquitted.

The amount of cider made this season in New England is uprecedented, the yield in western Massachusetts being calculated by the Springfield Republican at 150,000 barrels The apple crop was exceedingly abundant, and some of the cider mills are still running. What to do with the liquid is a puzzler to the farmers. Every cellar being stocked with plenty for use as a beverage, a great quantity will be turned into vinegar, and it, is even hinted that a considerable amount will become applejack of the New Jersey sort, while some will be disguised as champagne. The use of what are called "grater" mills, which cut the apples instead of crushing them, increases the yield of cider, but is said to lower the quality. The average quality of apples necessary to make a barrel of eider is ten bushels, and the mill charge is thirty cents a barrel. The present price of good cider is \$2.50 at the mills. A manufacturer in South Deerfield has a full tank holding 250 barrels, and some farmers have used their cisterns for storage.

Cept Adams of the ship Ralston, who re Cept Adams of the ship Ralston, who re-cently arrived at Queedstown, writes Lloyds that at 3 o'clock on the morning of the 16th inst., when he was about fifty miles west of Fastoct, he saw a vessel of fire 2 or more miles distant. He ran down to assist her, and saw a steamship not more than 50 yards to the windward of the burning wreck. He could discover no one on the wreck and when he halled and asked if he could be of any service, the reply coming from the steam-ship was: "Keep your course, or you will burn too."

Four or five hours afterward Capt. Adams as the steamship astern. He was asked where he wa, bound, and answering Cork, was told that if he made any report of what he had seen, he had better look out for himself on his next voyage out. Capt. Adams describes the steamship as being built of iron and painted black. She sat low in the water, had black pole masts, and had black funnels between fore and mainmasts. She showed no name. He saw a number of men on her decks, between one hundred and fifty and two hundred on her upper decks. They were a sort of a blue uniform, and seemed to be English. our or five hours afterward Capt, Adams

Agricultural.

A Taluable Acre

clipped from his local paper, and asks 'who can beat fit?' Mr. Mathias Wellendorf, of St. Mary's Elk co., Pa., has an acre of ground which this year produced one hundred and fifty bushels of turnips, one hundred and ten bushels of potatoes, sixty bushels of corn, one and a half bushels of beans, and two oads of pumpkins. The turnips at forty cents a bushel, are worth sixty dollars; the potatoes, at eighty cents, eighty-eight dolfive dollars; the beans at two dollars, three dollars; and the pumpkins at two dollars a load four dollars which makes a grand total of two bundred dollars as the proceeds of ne acre, - Practical Farmer.

Buckwheat is one of the most staple articles of poultry food. It is very fattening, an excellent egg producer, and very much rel-tate will mak without delay. ished (by poultry. It is not, perhaps, used so extensively here as in Europe. In England, France, and especially in Germany, it forms not only a important part of poultry Positively -be self controlled, calm and food, but is much used for culinary purposes. Let your brain have all the rest it The great advantage, it has over other cer cals is that it thrives luxuriantly even on the poorest land. Those who have not tested its value as a poultry food, we advise to give it a trial.—Poultry Yard.

The Rural New Yorker says: 'Au intendng purchaser should have the horse brought out before him, and watch the animal as he stands at rest. If the own r is continually starting the horse into motion and urging him to 'show off' something may be suspect ed, because it is when the horse is at perfect rest that his weak points are divulged. If the horse be sound he will stand square on his limbs, without moving any of them, the feet being placed flat upon the ground, and all his limbs plumb and naturally posed-If one foot be thrown forward, with the toe pointing toward the ground, and the heel raised, or if the foot be lifted from the ground. and the weight taken from it, disease or tenderness may be expected

Eggs as an Article of Diet.

There is no article of food more whole ome and nutritious than that supplied by eggs. There is a difference in their flavor and quality, owing to the difference in the diet of the birds; yet there are eggs of winged creatures which are unfit for nourishing the human body, Their chemical composition s nearly the same, for the white and yolk are almost invariably present; and these con-sist, in the first case, of albumen and water. Eggs require for digestion about as much time as mutton—that is from three to four hours. They are most readily digested when boiled until the white becomes partly consolidated. An ordinary hen's egg weighs ry foaded pistols, so they usually have to from one and a half to two ounces; a duck's egg from two to three ounces; the egg of a sea gull and the turkey from three to four unces, and the egg of the goose from four to six ounces. The solid matter and the oil in the duck's egg exceed those in the hen's egg by about one-fourth. According to Dr. Edward Smith in his treatise on "Foods' an egg weighing an ounce and three-quarters consiits of 120 grains of carbon and 184 grains of nitrogen, or 15.25 perceutum of carbon; and two per centum of nitrogen. A recent writer estimates that the value of one pound of eggs as food for sustaining the active forces of the body is to the value of one pound of lean beef as 1.581 to 990. As a flesh producer one pound of eggs is about equal to one pound of beef. A hen may be calculated to consume one bushel of

> pound of eggs. A pound of perk on the contrary, requires about five and one-third pounds of corn for its production. When eggs are twenty-four cents a dozen and pork ten cents a pound, we have a bushel of corn producing \$2.88 worth of eggs and \$.05 of pork .- Toronto Glabe. Cows.
>
> Treat them generously and kindly, but do not keep them fat, unless they are to be turned off for beef. A cow is a machine, a laboratory for converting raw materials into milk If little be given, little will be receive ed. All animals should have exercise, especiare naturally lazy, but they will be the betdays at a time. They need light too. Direct sunshine exerts a powerful influence for good on animals, as well as on plants. Do not over look a good supply of pure water two or three times a day; or good ventilation and proper clearing of stables. When the ground is frozen and covered with snow, it may be well enough on pleasant days to scatter the fod-der, and allow the stock plenty of room to pick it up, but when it is muddy, no one bu

orn yearly, and to lay twelve dozen or

eighteen pounds of eggs. This is equivalent

to saying that three and one-tenth pounds

of corn will produce, when fed to a hen one

The Adulteration of Feed.

Mr. George T. Angell read a paper before
the American Social Science Association in Boston recently on 'Public Health Associa tions,' in which he said:

Cayenne peper is adulterated with red lead mustard; with chromate lead, curry powder with red lead, vinegar with sulphuric scid, arsenic and corrosive sublimate. It is said that probably half the vinegar now sold in our cities is rank poison. One of our Bostor chemists analyzed twelve packages of pick les, put up by twelve different wholesale dealers, and found copper in ten of them. Many of our flavored oils, syrups, jellies and preserved fruits contains poisons. The adulterations of tes are too numerous to men tion. Coffee is not only adulterated, but a patent has been taken out for moulding chiccory into the form of coffee berries, and I an told that clay is now moulded, and perhaps flavored with an essence to represent coffee Cocos and chocolate are adulterated with various mineral substances. Several mills in New England, and probably many elsewhere, are now engaged in grinding white stone into fine powder for purposes of adulteration. Flour has been adulterated in England, and probably here, with plaster Paris, bone dust, sand, clay, chalk, and other articles. A New York house sells three grades of cream of tarter. A Boston chemist recently analyzed a sample of the bes grade, and found fifty per centum of terra al-

ba in that. Much of our confectionery contains thirty-three per centum or more of ter-ra alba. The coloring matter of confection ery ferquently contains 'end mercury, arsen-ic and copper. Baking powlers are widely sold which contain a large percentage of ter-

PATURN NOTICE.

The act of April 21, 1856 requires Assessors Supervisors and Collectors of Road, Foor and school taxes to make returns to the county Commissioners "for the collection of all taxes on seated and unseated lands," As all returns must be made on or before the first day of February next and as collectors often fall to make return in the proper time and afterwards claim exonerations for what they have neglected to return, whereby the County or township loses the tax so exonerated that should have been returned for collection. We have fixed upon the following days to receive the returns above named, and at the same time collectors of county taxes shaleone in and make final exonerations on their duplicates. For all tistricts south of the river on Tuesday, January 28, 1873; those cast of Hig Fishingi creek on Wednesday January 29; and hose west of Hig Fishingereck on Thursday, January 30.

We want all collectors to comply with this notice, it may be claimed to be soon to make the exonerations, but by allowing collectors one, two or three years before making oxonerations much tax is lost by the carelessness or easiless of the collector, and then finally a large amount of exonerations is claimed on Road Retate which collectors should have returned or collected.

The sooner shouldestes are settled the better for both taxpayer and collectors; otherwise collectors become careless and often collect money and appli-it to other purposes, and then finally when the mon-by is to be paid it is not forthouning, and thereby those who pay willingly pay always and many new-er and then the willing oams must make up for the neglect of the collectors.
