Nothing Better than Farming.

There are a certain class of farmers who are never satisfied with the results of their labors, and they look upon the mercantile business as something to be got into as soon as they can raise the necessary capital. They seldom consider how the successful merchant has strived to establish himself in the way of making money, and how watchful he has to be to sustain himself; still, there is no reason why the same processes may not lead to as great succes ses on the land as in the store; indeed it is a common experience that it is so. Handreds of men every years make money to their entire satisfaction out of agricultural or horticultural pursuits. They are not so well-known-do not make as much show as the store-keeper-agriculturists are too much scatter ed to make this imposing appearance; but the profits we speak of are there

as surely in the one case as in the These successful businesses are simp ly the result of a series of experiments as to what can best be done. Hardly a business that we know of, that may be pointed out as illustrative of great success in the line marked out for it at some one thing may have suggested the enterprise, but one after another, as some parts would be better understood, the least profitable would be dropped, the least profitable would be dropped. It will make wide hem on sheets, &c., hem an anner of bias woolen goods, as not meritore. It will make wide hem on sheets, &c., hem an enter or goods diment to hem on other menior, and the profitable would be dropped, the least profitable would be dropped, and the profitable would be dropped, the least profitable would be dropped. gan dealing in a dozen articles would end in only a few. We have frequently pointed out the fact, and urged on cultivators that this is the only way to

every farm as to what will grow and thrive remarkably well; and having found this out, what would be the prosspect of a good market for it. It is rare indeed that any one who raises just exactly what his neighbor does, ever makes a great stride in the way of it will make knife platting. wealth. He makes out of wheat, or corn, or pork, a fair average living price, and if he is a little more intelli-gent than some as to the niceties of cultivation he may make more than his neighbors; but the rich farmer is generally he who by careful observation and calculation is able gradually but surely to get out of the beaten track .-Germantonen Telegraph.

Texas Cattle.

Westward from Houston the country becomes drier, though there is still much low prairies. All along the road through this region one sees many cattle, and soon learns the meaning of the accounts, so often repeated, of cattle being able to "live out all winter, without feed or shelter." They do live so; that is, some of them do. Many die from starvation. I saw their bodies everywhere, and many of those still alive were wretchedly emaciated. Hundreds of them were, to use an expressive southwestern phrase, "on the lift;" that is when they laid down they were so weak that they could not get up; but if they were helped to get up they could walk about and feed, until wearing ness or weakness prompted them to lie down again, when the process had to be repeated. I saw great numbers of dead animals in the pools and ditches, where they had come to drink, and being too weak to struggle through the mud they had fallen into the water and been drowned. The owners appeared generally to hold the same cheerful philosophy with a man with whom I talked at Corinth, Miss., who thought he did not lose much when hundreds of his sheep died for want of food and shelter because as he said "we get the wool." So those Texas cattle men seemed satisfied with the hides. "Hundreds and thousands of cattle die when the new grass begins to come:" so I was told everywhere. The explanation is that the cattle, weak from long starvation and ravenous with hunger, eat excessively on the fresh grass. They have no "dry feed" to serve as a corrective, and the surfeit on green food kills them. The whole system and plan of cattle-raising in this state seemed to me to be enormously wasteful yet the industry is a source of wealth. It would, however, be much more pro fitable with better methods; and as population [becomes more dense, and the range for cattle is circumscribed, these will of necessity be adopted. Nearly every pursuit in the South is to a great extent carried on, or rather goes on, with similar wastfulness of method and result. Of course no business thus managed produces so much as it would if prosecuted with even moderate energy, foresight, and prudence. I should not like to express my opinions upon such matters so forcibly as Southern men express their's everywhere .-June Atlantic.

Raising Plants Without Earth

To cultivate plants without earth had long been the dream of chemists : after years of patient study the gardner of Vascœuil has discovered a means of giving continued life and nourishment to plants without their ever being brought in contact with the soil. All he does is to wrap the roots up in some moss to which he has imparted this life-giving power. This "fertilizing moss" is not only capable of affording nourishment to all vegetable life, but will do so indefinitely. will do so indefinitely. Since November, 1880, the date a

which his researches proved successful, he has constantly been testing his process, and has never found the least interruption in the vegetative functions of the plants subjected to its influence; on the contrary, winter and spring plants have blossomed with a vigor he has never seen in his garden. With the shelter of a glass, hellebores taken up at the end of November and the middle of December have remained two and a half to three months in blossom, Other plants, primroses, daisies, violets, auriculas, have not only been in bloom for three months, but have thrown out new buds. At Vascouil we saw plants loaded with blossoms which had been in the fertilizing moss for weeks. The public in Rouen and Paris have during the past year had frequent opportunities of beholding again and again the process in full operation in the exhibi ions of flowers and vegetables which M. Dumesnil has given. The exhibi-tions have been arranged so as to give some idea of the useful and beautiful

results of this new discovery, and also to afford an opportunity of following every stage of the vegetation of plants reared without earth. During the two winters since M.

Dumesnil perfected his discovery, he
has had all kinds of ordinary flowers
blooming in baskets containing the fertilizing moss. On the occasion of any fete, his tables have been covered with a profusion of spring flowers, and he has been able to decorate his rooms with a freedom impossible with plants growing in earth. Thus, while nature outside lay frozen and dead, the inter-ior of his house has been a blooming parterre.—Good Words THE DAVIS.

WHITE SEWING MACHINE CO. The "WHITE" Shuttle Sewing Machine J. BALTEER, General Agent, Moomaburg, Pa.

Der When farmers can buy a true Ammoniated Super-Phosphate, made chiefly from Slaughter House Meat and Bone, for \$25 per ton at the Railroad Depots, in Philadelphia, it is a folly to pay out money for the old fashioned High Cost Fertilizers, which other man-ufacturers persist in holding at prices varying from Thirty to Forty Dollars

The past season, everywhere, has clearly shown, that the low cost Ammoniated Super-Phosphate paid the best on Wheat and Grass. The day for high cost Manures has passed. The ex-perience of good farmers, who look dosely at First Cost and Results, have proved that those costing \$25 PER TON, OR LESS, with a reasonably good Analysis of free Phosphoric Acid AND AMMONIA, have paid them by far the best. There is abundant evi-dence of this and from farmers who don't simply guess at what they are

In the four years of the use of Baugh's \$25 Phosphate, there has not been a single reasonable report of unfavorable action on any crop, and this is a testimony in itself more than volumes of certificates. We do not ask for, or publish certificates; that custom, has ong ago ceased to be of any conse
