Agricultural Topics

From a pretty long experience in planting fruit trees we have come to the conculusion—and this is not the first time we have printed it in these columns—that two year old fruit trees are more certain to great the second trees are so the control of the life of a farmer is, therefore, to get this notion out of his head. The reason why life is so lonely in the country is that his mental resources are so try is that his mental resources are so the life of the life of the life of a farmer is, therefore, able one. A Southeastern Virginia correspondent save: "That man, remarked General Roberts, pointing out a man in the crowd, "sold \$80.000 worth

hand, and it not only saved them, but they are at this time in perfect health, growing finally. All fruit-trees, to af-ford the best satisfaction, should be of the age here indicated, and if properly planted and cared for, will be more hardy, vigorous and longe, lived than trees of older stock. The desire some people have of getting fruit as quickly as possible is not always realized by planting older trees; and from the very fact that they may bear earlier, will be at the expense of the health and growth

WHEAT GROWING. The success in growing wheat in Pennsylvania the last few years should stimulate us to raise a greater average per acre than has been the case in many portions of the state. We notice that as much as the average of thirty bush-els has been obtained this year in some els has been obtained this year in some of the western states; and we are well aware that the yield has been increased this year in Pennsylvania—in some special instances over forty bushels per acre have been obtained. Of course there are various causes influencing success. That which might be an aid at one point might be an injury at another. But there are one or two matters that wheat growers are apt to forget. The wheat growers are apt to forget. The work early n the spring. The lawn first is, that as a general thing it is well mowings and clover heads can be sing. understood that manure must be liberally applied to induce a good crop; but many persons plow it under, hence, it is not until the plant has set its roots deep down into the soil that it derives much benefit from manure. But if the manure is so placed that the young rootlets could push at once into it on germinating, it would get an early start on its vital course, which would establish it firmly against any future drawbacks.

In the se and place few persons have any idea of how manure operates in making roots. If we bury a shovelfull of manure some distance from a thrifty tree in early spring, and examine it again the ensuing fall, we find the lump of dung a complete mass of roots, while the earth in other parts contiguous has but a few struggling ones. Some people think that the roots are attracted to the spot by the manure; Some people think that the roots are attracted to the spot by the manure: but it is not so. They are actually created by the manure. A leading root sucks into the rich mass, and finding plenty to eat, at once sets to work to increase and multiply. Contact with the manure, therefore makes roots; and the principle in successful wheat culture should place the grain and the food as close together as possible, if we would encourage it to start. We all know very well how this is done with corn. Manuring in the hill is quite a universal practice; but where it is not, universal practice : but where it is not, ports, it is estimated cannot be less than the result is well known. We repeat, in previous years. Roumania and therefore, give the crops an early start. Servia have both average crops, the It has a wonderful influence in its efforts in after life to come out well.

Servian yield being of finer quality than the Roumanian corn. Both countries

As the time is near at hand when the work of picking and putting up the apple crop for the winter and spring will have to be attended to, it is well that the methods preserving this valuable fruit should be considered. We have hitherto on frequent occasions discussed them, and pointed out what we conceived to be the best method to pursue. In brief, we would, therefore, repeat in substance, as follows: 1st, the substance, as follows: 1st, the substance, as follows: 1st, the substance is the Roumanian corn. Both countries produce more than they require for home consumption. Both will have a fair surplus for export. Reliable details af Russia's crops are wanting, but it appears certain that, with the exception of the province of Cherson, the average will about be reached, and already the exports of wheat and rye from the ports of the North, the Baltic, and the Mediterranean seas are proceeding in full swing. Hungary has a full average crop, Austria a week average and the quality available for exrepeat in substance, as follows: 1st, the apples must be good keepers, free from bruises or blemish. 2d, they must be spread out on shelves or packed in barrels, and kept in an atmosphere of from forty to fifty degrees, better from forty to fifty-five, and at a temporature as equable, as possible. Some perature as equable as possible. Some cellers are just the thing and preserve them beautifully. Others are too moist. Where this is the case a few bushels of stone lime should be used. Sliding of Parker's Hair Balsam. shelves, six inches apart, latticed bottom with a single layer of fruit, are exconstant examination without disturbing the fruit. A friend informed us some years ago that with a large stand of these shelves in his cellar, with a few inches of lime on the bottom of the cellar, he kept his apples into May in perfect condition and good flavor.

A vault in the cellar, kept closeed, but with some ventilation, frequently answers admirably, as we know from tremely convenient, as they allow of

but with some ventilation, frequently answers admirably, as we know from personal experience. If carefully packed in clean, naked barrels, the head forced down in order that the frait may be quite solid, and the barrels placed under an open shed until late in Novem ber, but before hard freezing comes on, and then be removed to a dry cellar, where the tempature will range about what is stated above, there will be little danger of the fruit not keeping through the winter and late into the spring. Indeed, we have known it to spring. Indeed, we have known it to grass be allowed to lie and rot on the keep until June.—Germantown Teleground A great many persons seem to think that grass exerts some sort of a poisonous effect upon orehard trees,

How to make Farmers' Boys Contented.

Let us suppose that a boy is to be a handsomer crops of apples than grew in orchards that were never ploughed farmer. It is notorious that boys in these days do not take kindly to the farmer's life. What is the reason? Is it that the farmer's grains are slow, or that his labor is severe? These reasons partly explain the facts, but neither of them is the strongest reason. The lone-liness of the farmer's life is a weightier cause so much harm to the crop. consideration. The girls and boys now Tribune & Farmer. growing up, whether in the towns or growing up, whether in the towns or in the country, do not like the isolation and solitude of the farm. They would rather live in less comfort, and work vegetable combination has been introharder for less net wages, at more disagreeable labor in the factory villages the liver and the kidneys, and at the and in the cities, because they like to same time imparts strength and vital be in a crowd. They depend on outside excitements. "There is nothing going on in the country." That is the discovery. Price \$1.00.

uniform reason given for preferring life

time we have printed it in these columns—that two year old fruit trees are more certain to grow, to assume a good form, to become vigorous and longlived than trees twice as old. Indeed, we have seldom succeeded well with trees more than two years old.

Some years ago, we went to a nursery for some two dozen of pear and cherry trees, and in the hurry of writing the order, not being able to go a ter the trees personally, nothing was said about the age of them. We only said, "Send good trees, well-branched." We never saw a more perfect lot of trees, but they were at least four years old and some of them nine feet high. They were planted carefully and cut back severely, but only moderately at first, to save them. The spring could have not been more favorable for transplanting, and when the dry whether set in they were frequently watered, which doubtless saved the majority. Five of the old died. We do not remember losing a small tree. We repeat our conviction, therefore, that one and two year old trees are better in the end than those older; and though we may have to wait sometimes (not always) longer to get fruit, the trees are far healthier and more productive and give more satisfaction.

longer to get fruit, the trees are far healthier and more productive and give more satisfaction.

We may add that several of these pear trees were pruned within from six to ten inches of the main stock, resembling when done a half-closed upturned hand, and it not only saved them, but

Who are to spend their lives on other industrial persuits, enlarging their horizon, multiplying their resources; and showing them how to extract from the world about them a higher enjoyment than is to be found in the diversions and dissipations on which the multiplying their resources; and showing them how to extract from the world about them a higher enjoyment than is to be found in the diversions and dissipations on which the multiplying their resources; and showing them how to extract from the world about them a higher enjoyment. -June Century.

The Poultry Yard. require a certain amount of coarse and refuse matter to keep them free from constipation, indigestion and other kindred complaints. The prudent and careful poulterer will take "time by the foreleak" and holose in the coarse and as much superior to the usual soggy mass as a fine mealy potato is superior to the water soaked article. forelock," and before wintersets in will store away cabbage, turnips, rowen, onions and potatoes for his fowls. Cabbage is undoubtedly the very best and cheapest green food that can be had. It is not necessary nor economical to purchase prime heads for their use, as the soft heads which are not marketable are just as good, and they cost one half

The Bad and Worthless Are never imitated or counterfall. This is especially true of a family medicine, and it is posi-

tive proof that the remedy imitated is of the highest value.

As soon as it had been tested and proved by the whole world that Hop Bitters was the purest, best and most valuable family medicine on earth, many imitations sprung up and began to steal the notices in which the press and people of the country had express-ed the merits of H. B., and in every way trying to induce suffer-ing invalids to use their stuff instead, expecting to make money on the credit and good name of

Many others started nostrums put up in similar style to H. B., with variously cunningly devised names in which the word "Hop" or "Hops" were used in a way to induce people to believe they were the same as Hop Bitters. All such pretended remedies or cures, no matter what their style or name is, and especially those with the word "Hop" or "Hops" in their name or in any way connected with them or their name, are imi-

counterfeits.

A NOTED BUT UNTITLED WOMAN.

The shows is a good likeness of Mrs. Lydis Z. Fink-ham, of Lynn, Mass., who shows all other human beings may be tentifully called the "Dear Friend of Woman," as some of her correspondents leve to call her. She is exactably develod to her work, which is the outcome of a life-study, and is obliged to keep six lady assistants, to help her answerthe large correspondence which daily pours in upon her, each bearing its special burden of suffering, or Joy at release from it. Her Vogstable Compound he a medicine for good and not self purposes. I have personally investigated it and an activate of the truth of this.

On account of its proven merits, it is recommended and prescribed by the best physicians in the country. One says: "It works like a charm and saves much pain. Is will cure entirely the worst form of falling of the uterus, Issuerrhone, trougular and painful Meintruntion. Sil Ovarian Troubles, Inflammation and Ulceration, Floodings, all Displacements and the consequent splinal weakness, and is especially adapted to the Change of Life."

It permeates every portion of the system, and gives new life and vigor. It reacoves faintness, flattlinny, destroys all craving for stimulants, and relieves weakness of the stomach. It cures Bloating, Readaches, Nervous Frontention, General Debility, Resplacements, Dopression and Indigestion. That feeling of bearing down, cauding pain, weight and backsohe, is always permanently cured by its uss. It will at all times, and under all circumstances, act in harmony with the law that governs the female system.

It cours only \$1, per bottle or six for \$3, and is sold by druggists. Any advice required as to special cases, and the names of many who have been restored to perfect health by the use of the Vogetable Compound, can be obtained by addressing Mrs. P., with stamp for reply, at her home in Lynn, Mass.

For Kidney Complaint of either sex this compound is unsurpassed as shundant testimonials show.
