JAMES WEIGMAN. Benton, Pa., Aug. 7, 1883. Eating Lemons.

EGGESTION FROM EXCELLENT MEDICAL AD-

A good deal has been said through the papers about the healthfulness of lemons. The latest advice is how to use them so they will do the most good, as follows: Most people know the benefit of lemonade before breakfast, but few know that it is more than doubled by taking another at night also. The way to get the better of the bilious system without blue pills or quinine, is to take the juice of one, two or three lemons, as appetite craves, in as much loo water as makes it pleasant to drink without sugar, before going to bed. In the morning, on rising, at least a half hour before breakfast, take the juice of one lemon in a goblet of water. This will clear the system of a humor and bile with efficawithout any of the weakening effects of calomel or congress water. People should not irritate the stomach by eating lemons clear, the powerful acid of the juice, which is almost corrosive, invariably produces inflammation after a while, but properly diluted so that it does not burn or iraw the throat, it does its medical work without harm, and when the stomach is clear of food, has abundant opportunity to work over the system thoroughly, says a

medical authority. Light Street Locals.

no alteration of the elements has occurred, and which requires nothing more than the This change will take place very quicky, as many milk dairymen find to their surprise and cost when milk is canned ightly before it has been cooled and aired sufficiently. Thirdly, we know that this needed airing simply affects the oxidation of the milk required to destroy the germs present in it, and by the operation of which the change of the milk sugar to milk acid is produced. Fourthly, it is known that exposures to air, and necessarily to oxygen, which is the only active element in the air, develops a high flavor in the cream and in the butter made from it, and that cream so exposed to the air, or, as we term it in common parlance, ripened, churns more easily than any other cream, and produces the very best quality of butter as regards color and flavor. The fact is, the flavor of butter, and of cheese as well, is developed only by a process of oxidation, airing or ripening, for all these terms mean the same thing, and if the dairy or cheese-room is not well ventilated and provided with an abundance of fresh, pure, moving air, good Eyer's. butter or cheese cannot be made.
