Rules for Butter Making.

An experienced dairyman of Central New York has issued a pamphlet describing his methods of making butter. concern. What a man is paid for a A few brief rules from this pamphlet picture or a book, a sketch or a poem

carried to a factory, the temperature \$5,000 apiece for his stories. Mr. should be reduced as low as 60 de. Stoddard has to do an enormous

jure its keeping quality, and it also ex finding material for his stories and enpands the water, rendering its relative- joying life after the fashion of the ly greater density less instead of increasing it. To go 5 degrees below 40 degrees would have practically the side his literary profession. Colonel

grees.
Churn at such a temperature between

Draw off the buttermilk and wash in clean water before gathering the butter, until the water runs clear. If one washing is in brine, it is all the better, as brine coagulates the cheesy matter, which disolves and then is

Salt to suit customers, using none but refined salt made for dairy purpos cs. The best American salt is as good

Put up in such packages as are demanded by our market. If for long the hotel where eleveland was stopkeeping, pack in firkins, set in a cool, sweet place, and keep the butter covered with brine.

Air and cool your milk as fast as possible, down to at least 70 degrees if you carry it any distance to a factory or creamery. Do the same if you make it into cheese at home, though you drag it into the boat. After they had done so it again escaped them and got

Apples for Milch Cows.

Diverse opinions prevail among far-mers as to the value of apples for milch tion for its release. There was much Diverse opinions prevail among farcows. Some hold that apples decrease ties is beneficial in every way. So This was done, and the speeches were good an authority as the Massachus-made. But the Judge found the fawn

The fact is, there is a right and a wrong way, as well as a right and a wrong time to feed apples to milch cows; and there is another important fact, which is, there is a great difference in orchards; one orchard may broduce only Roxbury russet apples, while another may produce early sweet boughs, early Williams, Porters, gravenstein and other summer and fall apples. While it might not injure a cow to give her two pecks of ripe early sweet boughs the first time feeding apples, it would not do to give her two peles, it would not do to give her two peles, it would not do to give her two peles, it was finally decided to let the Governor Gedeal to the Governor Gedeal twas family decided to let the Governor Gedeal transported to be produced to three inches square, according to the streence of the spool to be produced. They family fami pecks of green russet apples when first commencing feeding. When cows are first fed on apples only small quanti-ties should be fed, gradually increasing until they are from a peck to two pecks per day, according to size and condi-

tion of the cow. In feeding apples it should ever be kept in mind that the nutriment in a green apple is very small indeed, when compared with that of ripe apples, she may be greatly injured by eating a quantity that, when she becomes accustomed to eating them, would be a great benefit. Sour apples that are so green that they will rot before they will mellow, are, as a rule, not fit to feed out to milch cows; but apples that are sweet, or sour apples that are ripe enough to mellow, are very beneficial to not only milch cows, but to

pigs and even horses. Most of apples that ripen in the autumn may be fed out and made to pay as much per bushel as small potatoes, when fed uncooked, but the winter apples are not fit to feed out until cold weather, when they begin to ripen; then they are valuable, and should not be permitted to be lost. The first of the winter fruit that drops is not worth saving, but when the apples are nearly grown, if gathered up and stored in a cool place, they will ripen so as to make both a healthy and nutritious food for

If the recent estimate of the wheat crop of this country for 1884, placing it at 530,000,000 bushels, is to be depend ed on, the record will have been beaten, to employ a sporting phrase, by about 25,000 bushels. An abundance of wheat cannot in the nature of things be a calamity; and yet it operates at first in a very disastrous manner. It causes a depression in the price, and the crop is held back by the farmers in the hope that the market will advance, For the time being, therefore, the far-mers have plenty of wheat but no money ; the railroads complain of diminished traffic, reduce their freight charges in order to encourage shipments, and show a falling off in earnings in consequence; and as the farmers will not trade extensively while holding their crops, business in general languishes in the midst of that plenty which we all regard as a just cause of thanksgiving. If only the farmers of American could have, coincidently with this bountiful harvest, the same eager demand abroad for their surplus which they had the pleasure of meeting a few years since, there would indeed be occasion of congratulation in the figures which we

in patching the uppers of fine shoes is generally made by dissolving the gutta percha in chloroform until the mixture is about as thick as syrup. Scrape and pare clean around the hole to be covered, and thin carefully with long cham-fer the edges of the bit of leather to be applied. Only a little of the cement i needed, but the surfaces must be pressed close together. The parts will ad-here firmly in a few minutes.

sidering the abandonment of water as a campaign beverage. Investigation proves it to be drunk more than half the time.—[Cleveland Herald.]

Notwithstanding the cholera scare that he guarantees Acker's Dyspepsia Tablets to be the best remedy for indigestion ever made, they always relieve headache.

Pay of American Authors.

The pay of authors is apparently an ; affair of private business and public Feed liberally: have pure water always accessible, and keep a mixture of equal parts of salt, ashes and sulphur within reach of the cows.

Be sure your stables are thoroughly ventilated, remove all droopings impossible, and freely within reach of the cows.

Be sure your stables are thoroughly ventilated, remove all droopings immediately, and freely use absorbents and deodorizers—such as sawdust, dry earth, or cut straw, never omitting a should not pay for his house rent. Mrs. Burnett gets \$5,000 for a novel published serially and as much again when put in book form. Mr. Howell gets about \$5,000 for a serial and a percentilation.

tage on the book publication. When milk is kept over night to be Marion Crawford has averaged about If milk is set at home for cream, the sooner it can be set after milking and if he had not a regular salary as literary critic of the Mail and Exthe higher the temperature the better, as cream rises best and almost wholly white the temperature is falling.

Never reduce the temperature below

No conververy creditable article of self-maunfac-

ture he is .- Boston Traveler.

Cleveland last summer at a mountain resort in the Adirondacks. There were ping, and the gentlemen were very fond of sporting, and also very fond of yourg venison. One day when they were out on the lake in a boat a little boils. fawn ran down into the water, and they were able by getting the boat in its rear to finally eatch it alive and drag it into the boat. After they had ort ir to the water. But they recaught it and brought it dripping and fright-ened to the hotel. Here they announc-ed their intenton of killing it for the table. The ladies, however, who were the flow of milk, while others maintain that it should be tried for its life before discussion, and it was finally decided that their use in moderate quanti- one of the party who should be judge. etts Ploughman says in reference to guilty of death, and the sentence was there is a right and a passed. The ladies still pleaded, and

The Proportion of the Sexes. One who has been examining the figures says that the United States census brings out the fact that the males outnumber the females in an increasing ratio. In 1870 native born females were in excess of the males by 17,598. In 1880 the males of American birth were 300,668 more than the females. The excess of foreign males over females was 581,189 as against drums. Some of the spools are dyed yellow, red or black; others are ready for use when they leave the drums. The number of yards of cotton on a spool is determined by the size of the spool is guaged to contain 100, 200 or 250 yards, as the case may be. Silk and linen firms always send to their spoolmakers patterns giving the over females was 581,189 as against over females was 581,189 as against size and shape of the barrel and of the 446,657 in 1870. This disproportion head and bevel, which determine the among the foreigners is intelligible enough, as there are always more male spool will hold.—Pittsburg Dispatch.

than female emigrants.

As regards the native population, the solution of the problem is probably that for some time after the war there was an artificial preponderance of fe-males owing to the diminution of the male population by about half a mil-lion of soldiers, who perished in the struggle, and that with the growth of a new generation the ordinary propor-tion between the sexes has been re-es-

The general rule in other countries s that there are more males born than females, and any local superfluity of females is either to be accounted for by the emigration of males, or the larger proportion of the sterner sex who die prematurely from war, or the accidents attendant upon masculine em ployment.

Spools are made in immense num

throws out the knotty or defective pie ces. The spools polish themselves by their motion and contact in revolving drams. Some of the spools are dyed amount of the silk or thread that the

A Shepherd Dog's Long Journey.

A good story is told of a dog's ability to find its way from a strange place to its former home comes from Flat Rock, Ohio. A young farmer named McCauley emigrated from that place to Kansas. He put his goods on the cars at Bellevne, and with them put a shepherd dog. On his arrival at his destination he drove from the railroad station to his brother's house, the dog following. The team was cared for, and the young man went into the house, leaving the dog outside. The next morning the animal could not be found. He wrote back to Ohio to his friends, and mentioned the disappearance of the dog. Three weeks afterward he received a letter announcing the arrival of the dog at its old home. The animal refused, however, to make up with any one, and in a short time died.
