A Help to Good Digestion.

In the British Medical Journal, Dr. W. Roberts, of England, discusses the effect of liquors, tea, coffee and cocoa on digestion. All of them retard the chemical processes, but most of them stimulate the glandular activitity and muscular contractions Dis. tilled spirits retard the salivary or peptic digestion but slightly when

sparingly used. Wines were found to be highly injurious to salivary digestion. On peptic digestion all wines exert a retarding influence. They stimulate the glandular and muscular activity of the stomach. Effervescent wines exert the greatest amount of good with the least harm to digestion. When one's digestion is out of order everything goes awry, unless as in the case of T. T. Seals, of Bellaire, Ohio, who had bad dyspepsia for seven years, the digestive apparatus is kept in apple-pic eating order by Warner's Tippecance the best appetite producer and regulator in the world.

Tea, even in minute quantities, completely paralyzes the action of the saliva. The tannin in strong tea is in-jurious. Weak tea should be used. if at all. Strong coffee and cocos are also injurious if used in excess .- The Cosmopolitan.

Manure for Grass-

Farmers do not seem to intend the grass crop to get any good of the man-ure applied, judging from the methods employed by many of them. This may sound like a strong statement, but the manner of applying manure on the majority of farms, will, I think, bear me out in making so strong a statement. In the ordinary system of rotation, when is manure applied ? Nine times out of 10 it is plowed under with the

When no strict system of rotation followed, and I am sorry to say that it is the rule rather than the exception, a field is sown and planted to the usual farm products, until it begins to show signs of weakening. Then the farmer begins to say, "Well, it is about time that field was seeded down." And by the way, he often crops it a year or two after this before seeding. In reality, the field has become impoverished to some extent, and before seeding to grass it should certainly receive a coat of manure But no, it is seeded down to "give it rest." There may be enough of the ingredients needed for grass growth available that have not been drawn by the different demands of the preceding crops in the soil, so that 2 or 3 fair crops of hay may be taken from the field. It is only when this begins to show alarming signs of falling off that the farmer thinks of supplying the real want -manure. He puts on a coat of manure and plows it under with the sod. Again and again in the course of years this process is repeated-always to the disadvantage of the crop as above shown. It is not, I think, because the farmer ranks the grass crop as secondary in importance. No reasonable man can look at the matter in this light; but it is because he has fallen into the way of thinking that grass will do well anyhow. To be sure. grass may do fairly well where some other crops would have had but a sorry existence, but that is no indication that it will not do much better if given

I know of nothing that will respond quicker to manure and good tilth, than the grass crop. A farmer ought not to be satisfied with a single ton of hav to the acre. He can get 2 tons from the acre if he will but give his land the proper treatment. If he will fit his and up for the grass crop, as he does for wheat or corn, he may expect such a return. But if he manures only for the wheat and corn, he need not expect much from the grass crop.

a better chance.

We have gotten into the way of expecting altogether to much from our meadows. We cut one and sometimes 2 crops from them in a single season, and then turn in the stock to pick them down during the Antumn. I wonder if land is really taking a rest under this manner of treatment?- W. D. Boynton, in Western Plowman.

To Administer Medicine to Swine.

Considerable trouble has been experienced in dosing the hog. The American Agriculturist says that if the medicine can not be given in his food, as when he has no appetite, or is in great pain, it must be administered direct. To do this is quite difficult, and most farmers give it up, or adopt the Homeopathic treatment, because it is so much easier. When properly managed, it is not very hard for the pig or the attendant. The pig is caught by a slipnoose in a strong rope, which goes through the mouth, and holds back the tusks. He will pull back with all his might, and the rope must be made fast quite short, to the top of a post or fence then his legs are secured so that he can not spring forward. Now if an old shoe with a hole in the toe is given him to chew upon, he will champ away upon it as angrily as possible, and the medieine can be poured into his mouth through it—a little at the time, or he will choke and strangle and cough. Another way is to hold the pig in the same way, or as for ringing, and to pour the medicine iuto one nostril through an oil can such as is used for oiling machinery. Either of these methods render it possible to give medicine to a pig as effectually as to any animal, and it is not probable that his rage will have any evil effect, as in the case of a struggling child .- Tribune

PAPER READ BY MR. J. R. TOWNSEND A. THE MEETING OF THE STATE

THE MEETING OF THE STATE
BOARD OF AGRICULTURE
AT BLOOMSBURG ON
WENDESDAY DEC.
2, 1885.

I do not propose to give a long, or attempt to give a learned essay on this subject. I do not propose to trace the origin of the grape, as we all know it is one of great antiquity and a fruit that is at present extensively grown throughout the civilized portion of the world, and there is probably no branch of Horticulture at the present time, in the United States which is receiving so much attention as the cultivation of native grap s, while the large increase of acreage in some of our States shows that the cultivation of the grape is fast becoming a source of great weelth, and it is one of the principal features of this essay to draw the attention of my farming friends to the advantage that may be derived from the cultivation of grapes in the farm garden. I simply propose to give the result of several years of exterimenting with different varieties of grapes may be planted that are suited to our states and the cultivation of several years of exterimenting with different varieties of grapes may be planted that are suited to our states of the several years of exterimenting with different varieties of grapes may be planted that are suited to our states of the several years of exterimenting with different varieties of the grape, in order that varieties of grapes may be planted that are suited to our states of the several years of exterimenting with different varieties of the grape, in order that varieties of grapes may be planted that are suited to our states of the principal agree with me in saying that DR KENNENYS and the result of several years of exterimenting with different varieties of the grape, in order that varieties of grapes may be planted that are suited to our states of the grape, in order that varieties of grapes may be planted that are suited to our states of the grape in order that varieties of grapes may be planted that are suited to our states of the grape in order that varieties of grapes may be planted that Millions bear testimony to make careful to the cause of disease, and the native berbs and roots of California, the medicinal properties of which are extracted therefrom without the use of Alcohol.

It removes the cause of disease, and the nation recovers his health.

Divider and Life-sease of acreage in some of our States shows that the cultivation of the grape is fast becoming a source of great wealth, and it is one of the principal wealth. BITTERS In healing the sick of every disease man is sele to.

The Alterative, Aperient, Disphoretic, Carmitative, Nutritions, Laxative, Sedative, Counter-Irritant, Sadorille, Anti-Indians, Solvent, Diarette and Tonic properties of Viviguas Bitters exceed those of any other medicine in the world.

No person can take the Bitters according to directions and remain long much, provided their bones are not destroyed by mineral poleon or other means, and the vital organs wasted beyond the point of repair.

Billons, Remittent, Internitient and Malarial Fevers are prevalent throughout the United States, particularly in the valleys of our great rivers and their vast tributaries during the Summer and Antana, especially during seasons of unusual host and dryness. grape, in order that varieties of grapes may be planted that are suited to our county, and that my friends may plant grape vines that they can rely will produce fruit to perfection. On many occasions while travelling through our Anium, especial and dispuses.

These Fevers are invariably accompanied by extensive decomponents of the stomach, liver and bowels. In their treatment, a purgative, exerting a powerful influence upon these organs, is absolutely county I have frequently observed a very much neglected portion of some

was the farm garden, a part of the farm that is so closed a preceded with the demestic part of the farm that it should by no means be so neglected.

I will not attempt a description of the usual farm garden, but only state that from frequent observation 1 have noticed the entire absence of grape vines, and when by chance they are found in the farm garden they are mostly of an inferior variety or in a very neglected state, producing very little fruit and being in fact of no pro-

lating the secretions of the liver, and generally restoring the health functions of the digestive, organs.

Fortify the body against disease by purifying sill its flaids with Vingaan Buyrens. No epidemic can take hold of a system thus forearmed.

It Invigorates the Stommels and stimulates the torpid Liver and Bowels, cleaning the blood of all impurities, imparing life and vigor to the frame, and carrying off without the aid of Calcimel, or other minerals, all poisonous matter from the system. It is easy of administration, prompt in action, and certain in its results.

By spepsia or indigestion, Hendache, Pain in the Shoulders, Coughs, Tightness of the Chest, Presumonia, Dizziness, End Taste in the Mouth, Rilious Attacks, Falpitation of the Heart, and a hundred other painful symptoms, are at once relieved by Vingaas Bytrams.

For Inflammanory and Chronic Rheumatism, Gout, Neuralga, Diseases of the Blood, Liver, Kidneys and Bladder, the Bitters have no equal. In these, as in all constitutional Diseases, Walkeu's Vingaas Bittrass has shown its great curative powers in the most obstinate and intractable cases.

Hochanical Diseases.—Persons engaged in fit to the farmer.

During a period of several years have devoted my leisure time in cultivating grapes and I have obtained In these, as in all constitutional Diseases, Warsen's Vincoar Riveres has shown its great curative powers in the most obstinate and intractable cases.

Mechanical Diseases.—Persons engaged in Patuts and Mineral, such as Plumbers, Type-setters, Gold-beaters, and Miners, as they advance in life, are subject to Paralysis of the Howels. To guard against this, take occasional doses of Virsona Birrius.

Still Diseases, Scrofula, Salt Rheum, Ulcers, Swellings, Pimples, Fustules, Boils, Carbuncles, Ring-worms, Scald-head, Sove Eyes, Erystpelias, Rich, Scurfs, Discolorations, Humors and diseases of the Stin, of whatever name or nature, are literally dug up and carried out of the system in a short time by the use of the Blitters.

Pin, Tape and other Worms, lurking in the system from worms like Virgona Birrius.

Measless, Scarlet Fever, Mumps, Whooping Cough, and all children's diseases may be made less severe by keeping the bowels open with mild dones of the Hitters. This wonderful remedy is especially adapted to the systems of children, for purifying herbs alone give it its remarkable curativa powers. It contains no alcohol, opium or other poison.

For Fernale Complaints, in young or old, married or single, at the dawn of womanhood, or the turn of life, this Ritters has ne coul.

Cleanse the Vitlated Blood when its impurities burst through the skin in Fruptions or Sores; cleanse it when obstructed and sluggish in the veins; cleanse it when obstructed and sluggish in the veins; cleanse it when obstructed and sluggish in the veins; cleanse it when the Bitters a trial. R considerable practical information from repeated experiments with different varieties of grapes, until I think 1 am in a position to tell my friends what varieties of the grape are most profitable and suitable to our county. At our County Fair I had on exhibition 9 varieties of grapes, each one or all of which I can confidently recommend as being profitable to raise, and for the benefit of my friends I will give the names of the different varieties. For early graps I find The Early Brighton and "Moore's Early" are unsurpassed, both of them being thrifty growers and prolific bearers of I have also grown and tested several of "Roger's Hybrids; they are strong growers and not subject to mildew like the slow growing varieties. I find the "Agwam" or No. 15 - xcellent and for beauty of cinster and flavor of berries can hardly be excelled; while the Salem, a hybrid between the native and Black Hamburgh, is pronounced by the best of judges who have tried it, to have no equal among the numer-ous varieties now before the public.

> ers' Hybrids, all of a different flavor and each possessing merits the cothers The "Hartford Prolific" I find very good vines are vigorous and exceedingly productive. The "Martha", a pale yellow berry a seedling of the Concord, but ripening earlier, and better in flavor, I have grown with great success, and last but not least the "Concord". Of all grapes I do not know of any that can equal the "Concord." It is a sure and safe bearer easy of growth, hardy, vigorous and productive and less disposed to mildew than any other grape I have grown. Suitable for the table, or as a wine grape, it may lack in flavor, but as a prolific bearer, I have never grown a grape to equal it. When some other of my varieties may fail I can always rely on the Concord for grapes. As wine grapes I find the "Bacchus" and the "Clinton" are among the best, being extremely prolific and making an ex-

There are many other varieties of Rog-

While the grapes mentioned by me are varieties that are noted for their ex-cellent qualities, I do not wish to detract from the merits of many of our new varieties that are constantly being introduced by our grape growers, such as the Jefferson, Lady Washington,

Niagara and many others.

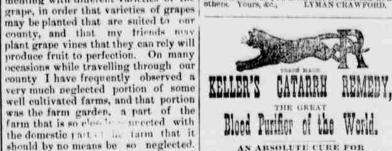

My farming friends may tell me they have no time to spare on grape vines: let me tell them there is very little time required to grow grapes; almost any soil is suitable if not too wet, and there are few fruits that require so little care, and that give such wide spread enjoyment as does the grape. Vines can be grown within half a foot of a fence or building and many a corner and unsightly spot can be made to produce grapes, and the little attention that is necessary is at a season of the year when the farmer can do very little farm work, while the summer care of grape vines is one of the most pleasant occupations for ladies er other persons who cannot perform the

Hygienists agree in pronouncing rapes as among the best of fruits. The grape possesses several rare qualities ; it is one of the most nutritious of fruits for those in health, while physicians frequently prescribe it to the invalid. Let me assure my farming friends that grapes should be on the table as often as they can be procured through the season, and not merely on special occasions but as an article of ood that is wholesome and nourishing. in the farm garden, but time will

heavier duties of the farm.

I have now told you what to plant permit me on this occasion to enter into any details as to proning and training the vine, or as to the merits of the different systems adopted by grape growers. In conclusion let grape growers. orge my hearers to plant out a couple of dozen grape vines in the coming spring, and I think you will find that with care this delicious and healthful fruit will amply repay for the outlay in the farm garden

adelphia and Buffalo who makes an exclusive specialty of treating chronic, long standing and lingering diseases to which man and womankind are subject, such as Consumption, Bronchial affections, Scrofula, Salt-Rheum, Loss of Manhood, Skin diseases, Rheumatism, Ulcers, Old Sores, Epilepsy, Syphilis, Deafuess, Loss of Voice, Chronic Diarrhoea, Chills and Feyer, Worms, Liver complaint, Cancers, Tumors, Paralysis, Tape worm, Heart disease, &c., &c. Frank Siddalls, the greatest Philadelphia advertiser, is reported to have lately remarked, as a fact worthy of comment, that he had never had a personal application for patronage from the ployed in vain, you should apply to Dr. McTagoarr at once, when he will tell di-rectly without holding out false hopes Newspaper Advertising Bureau of Geo. P. Rowell & Co. of New York. The reason for this may be found, not in the fact that Messrs. Rowell & Co. do not want business or are unwilling to drum for it, but that they find a cheaper and more efficacious way of securing pat-ronage is to keep their names before the public by using the advertising columns of the newspaper. Doing this they attract those advertisers who wish their services, and avoid annoying a frepublican. The is too useful a man to lose,"—Lackawanna or wasting the time of those who have not yet arrived at that conclusion Corner Lackawanna and Washington Avenues. The newspaper is the most persistent and at the same time the best mannered of all advertising canvassers.

CATARRH.

A Retrospect.

The incorporation of a company to build

a railroad from the town of Milton, through

the upper end of this county to terminate at some point in Columbia county, sug-

gests some reflections on the march of improvement that has taken place in this vicinity within the last four decades of years, Previous to that time Danville had no outlet for travelers except by stage coach route or by packet-boat on the canal. A railroad had not yet reached the place. True, one had been projected, a company chartered, the route surveyed, and the road bed partially built between Tamaqua and Catawissa, which was intended to reach Danville. This was about the year 1834, out financial disaster came, the company failed and the road was abandoned. But the projectors of the improvement are deserving of mention as far seeing men, particularly Col. Joseph Paxton, who was a man of great energy of character and full of public spirit. At the time the Catawis sa railroad was chartered it was looked upon as a c'dmerical undertaking to build a railroad over a succession of mountains and valleys, and it was predicted that even if it could be built, the income would not pay the expense of building and running the road. Hence it was a sort of Godseno to the croakers when the company collapsed as it was surmised that this failure would end all attempts to build a railroad over the mountains between the Schuylkill and the Susquelianna vallages. Yet not over twenty years afterward a new company was organized, which utilized the defunct Catawissa company's road bed, built a railroad and brought it to Danville, and henceforth our town was connected with Philadelphia by rail, and the tedious ride over the mountain by stage coach was a reminiscense of the past. The canal packet-boat up and down the river remained, but the opening of the L. & B. rallroad forced this style of locomotion off the track. Then followed the building of the D. S. & W., and shortly after the North & W. B. R. R., and now, instead of the citizens of Danville baving but one railroad route to the East and West, they have choice of half a dozen. Instead of the Catawissa railroad being the solitary track across the mountains between the Schuylkill and Susquehanna rivers, railroads thread them in every direction, and a dozen times more travelers

stage coach in former days. And now it is proposed to open up the upper end townships of the county to rail-road facilities; to make the Washington Hills echo and re-echo the snort of the iron horse and the shrick of the locomotive steam whistle. But the croakers are on hand as were their prototypes at the projection of the Catawissa railroad, pro phesying that it will not pay if it is built But the Catawissa has paid despite all the predictions of failure, and most likely the road contemplated will also pay when brought into operation .- Danville Intelligen-

Percy Smith, writing on the liability of trees to be struck by lightning, says: "The suggestion that oak trees are struck because they contain iron is both erroneous and absurd. If oak did contain iron it would in all probability increase its conducting power and act as a preventative. If oak contained an estimable quantity of that metal the wood would turn black on exposure to the air on account of the tannin which is present. The blackening may be seen surrounding the nails in any oak fence. The contour of the ground, nature of the soil, and the presence or absence of water, have more influence in deciding the locality of an electric discharge than the height of a tree, Add to this the WANTED-LADIES to work for us at woods, and we have at once an explanation of the apparent peculiarity of tall trees escaping unharmed while shorter trees are destroyed."

CASTORIA

for Infants and Children.

"Castoria is so well adapted to children that I recommend it as superior to any prescription known to me." H. A. Aschea, M. D.,
111 So. Oxford St., Brooklyn, N. Y.
