A Queer Tug.

A NEW CRAFT WHICH CAN GO ON LAND OR WATER.

From the Boston Transcript.

A new Canadian invention for use in the lumber districts is coming into general use in Northern Ontario. It is called a steam warping tug. It pro-pels itself on land as well as on water, and is used by lumbermen whose operations are carried on among small lakes connected by streams of uncer-tain navigation. Six of these unique crafts have been built by the inventors during the past season. steel shod runners for moving over-

bottom and up the bow is covered with steel boiler plate. An engine of 22 horse-power furnishes steam for ten hours' work, with three quarters of a cord of dry wood.

In the water it moves six miles an hour, forward or backward, as required, propelled by side wheels. On land it is propelled by having a cable drum on which is coiled five eighths of a mile of steel wire cable, which is fastened with pulleys to tree or some object in front, the boat moving as the wire is coiled up. The boiler is hung on an axle in the centre and a screw man to tip it forward or back and keep it level going up or down hill. It will move over an elevation of one foot in three on land and draws about 28 inches in the water.
