Heart disease and Bright's disease have increased alarmingly in this country in the last twenty-five years, the percentage of deaths having more than doubled. The much discussed "simple life" might be worth considering, as the cause of this increase is attributed by physicians to Americans living at the "pace that kills." Over striving for wealth or position, the desperate struggle to keep up in the race of life and, above all, high living, entail penalties which cannot be escaped save by a return to the simpler and less exhausting modes of existence of our forefathers.
