ALL IS NOT LOVELY IN TEXAS. One Visitor Finds It a Milkless, Fish-

less, Gameless Region, The idea pravalls among people of the North that a visit to Texas would mean a coathmous feast on pure fresh milk, fresh butter and eggs, with rich cream in abundance for the home grown fruits and berries; that mae choles cut ateak would be no rarityfor who has not heard of Texas beet? -that vegetables would be gathered fresh from the cardens for each meat: that the streeps abound in fine fixnes and that the choicest of wild game

would be served in the restaurants

and homes. How surprised will this person be, declares a writer in What to Eat, when he discovers in many rurat towns that cream for the coffee is looked upon as something of a luxury and that probably a fourth of the population of the small towns and cities use canned milk. Instead of the fresh strawberries he will and that canned berries are served even in the season and that most of the fruits and vegetables served in the restaurants are canned.

In no other State is there such a demand for canned goods as in this State, which many natives are prone to call the garden State of the Union. The extent of their consumption would remind a person of a district of mining camps in the desert instead of & State whose soil is far renowned for

The fish and game laws are as lax as the food and health regulations. One hunting for a good game dinner had better go anywhere else in search for it than to Texas, or if he is hunting for field sports he had better remain in New York State or in Ohio or Illinois for he can thus save the expense of the trip and meet with much better success with rod and gun.

The barrenness of the streams probably has been caused by dynamiting the fish and catching them with nets. The fisherman would row out into the centre of the stream, plant a stick or dynamite, light the fuse and rapidly row back to shore. When he was out of harm's way there was a loud expleaten, the waters would pulsate from the tremendous concussion and the life was crushed out of every living thing from the surface to the bottom of the stream for many yards about.

Before the waters became calmed again fishes large and small would begin to rise and float lifelessly on the surface and soon the stream would become literally covered with dead fishes of every description. Then the fisherman would ride out into the stream and gather up the fishes by the boatload, leaving those too small for use to rot in the stream.

This is the way they used to do it in Texas until the waters became so beer in that now in many streams not even dynamite will bring forth the fishes, for no fishes are there. Stringent laws were enacted against this custom, but they were disregarded in many rural districts

Even yet dynamiting is practised to some extent in the wild easiern part of the State near the Arkaneas Lorder. Sometimes it furnishes a diversion for fishing parties and even women participate in the sport

The former unsportsmanlike method reig ed in India from 1411 of trapping and night hunting has served in a like manner to externan- that Mahmud was one ate most of the game in Texas. Even now game is shot in and out of season without regard for the game laws.

Probably the filthiest stream in the United States exists in Texas. It is in Houston, one of the busiest cities | heads strong, and in the State, and its name is Buff-alo Bayou. This is an inlet from Calveston Bay and the Gulf of Mexico, its principal mission being a drainage channel and a waterway between Galveston and Houston.

This bayou receives all the dramaga of Houston, a city of 54,000 population, and the second largest city in the State. This stream, with its many besutiful magnolia trees and luxuriant foliage, passing as it does through the centre of the city, might be made a thing of beauty by a little work and схренке

instead it is an abhorrent, foul smelling stream, its surface covered with thick green scum and refuse from factories, stores and residence districts. In certain places the stench arising from it is so intolerance as to make it impossible for uninured noses to approach within yards of it. The climate must be healthful, however, for it it were not so the horrible santtary conditions would cause every inhabitant to die of pestilence.

How's This?

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure. F. J. CHENEY & CO., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions, and financially able to carry out any obligations made by his firm.

POISON GIRLS OF INDIA.

Kept by Princes to Dispose of Ene-

mies and Troublesome Relatives, These dangerous creatures, which Nathaniel Hawthorne immortalized in his "Rappacinis' Daughter," are supposed to be able to kill a person by breath or touch, and the Indian Government has no more succeeded in exterminating them then infant marriages and other Indian pecu-

Indian medicine men and private knew long before Professor Korl and other European allenists that the persistent consumption of polaons makes the body immune against poisoning. Accordingly potentates priests and others who had occasio to wish for the death of certain per sons every little while kept on han a number of poison-fed individual to send to the persons that they wished to do away with. Both boys and girls were trained for this murderous office, principally girls.

The Indian princes caused beautiful and healthy female children to be put under the care of physicians and medicine men soon after they were born. The medicine men strewed the floor under the baby's cradle with dried helmet-flower, or menk's hood, that is such from which the deadly poison, aconite, had been partially extracted. After a few months unprepared monk's hood was placed under the eradic and in vases in baby's chamber. Later the fresh flower was installed and baby was allowed to play with it and to suck it.

Still later a mild solution of acon Ite was added to baby's mlik and other food after a graduating scal-As the little hodies became more and more used to the pelson, the doses were increased, and usually when a girl was ten or twelve she could cat aconite in the same quantities as some arsenic eaters devour that pol-

It is a fact, though, that few human natures can stand the aconfte treatment. We are told of an Indian prince who succeeded only in raising one polson girl out of more than a hundred. But this poison girl was so venomous that nobody and nothing could live in the house she inhabited, both human beings and animals dying from breathing the same at:

as she. This particular poison girl whom nature had endowed to capture a man's heart, was used by the Indian prince at various times to murder pretenders by a single kiss, to roll his enemy's army of it's leader, to kill off inconvenient relatives had officials.

In this connection the story Sultan Mahmud Bigatt is recalled. All the chrondangerous poison lived. He could kill ply breathing upon hi daily indulged in : diet. His harem w: the year one of his . . dead by his side. It ve touch his linen, and out . tion for his servants be own clothes daily. My eaten poison from his earlier according to the chroniciers.

Highly Prized Trophy. .

The Roosevelt Cup was won after an interesting contest by the American vacht Vim, which defeated not only the other American competi-

tors in the race, but also the German yachts which had been sent the most coveted international trophies ever offered. It is not a challenge trophy, but remains the property of that winner. Its value is

Rubbing the Eyes.

Children in Italy are not allowed to rub their eyes. When an infant bursts into tears no effort is made to repress the emotion, but the youngster it allowed to have its cry out. It is aserted that this beautifies the eyes and makes them clear while rubbing the eyes injures them in many ways.

To Remove Warts.

Cover the wart first with vinegar, then with as much carbonate of soda as the vinegar will absorb. Keep it on 10 minutes and repeat the application twice daily. In a few days the wart generally drops off leaving only a tiny white mark.

Responsibility often finds people too slippery to perch upon.

EF BOOK MAILED PREE.

E. PEROR'S WONDERFUL CLOCK

Gibbs Represents Hemispheres and

Equator-Divided Into 44 Hours. A globe clock, described in the United a Ultrimeher Zeltung, is very Interesting from the point of view of its mechanism, and is at the same time an historic souvenir, since it bears on its base the inscription: 'Gift of His Majesty Emperor William lat to his Adjutant General N.

The clock complete on its base measures 18 cm. (about 7 inches) in height, and its sphere has a diameter of about 12 cm. (4% Inches). This sphere is made of copper, and the oceans and continents are laid on the surface of that metal in enamel. The globe is made in two parts, the northern hemisphere and the southern hemisphere, united by a large circular band, which is the equator, and is divided in a way to represent the twenty-four hours.

The globe is in equilibrimum in a Cardanic suspension. The foot carries a semi-circle, between the ex-

tremittes of which a full circle pivots horizonally. This latter receives perpendicularly to its axis of rotation the axis N. S. of the globe, which axis passes through the poles of the This manner of suspension allows the earth to take any angle of inclination, and to turn freely in no matter what position. In order to give the globe a position corresponding to earth, a weight has been attached on the inside, and its movement up and down permits an exact adjustment of this inclination. When this adjustment is once accomplished the globe turns, preserving its proper inclination, and resuming it if thrown out of it.

The movement of the clock has a cylinder escapement and runs eight days. The winding is managed at the lower part-that is, at the south pole. In two holes made in that part the two times of a special key are inserted and the globe is then turned like the knob of a stem winder. The William H. Hauck vs. Cabin Run | barrel is in the center of the globe, and it turns once every twenty-four hours. It drives a pipe whose extremity projects through the north pole of the sphere and carries a hand ornamented with a sun. It is at the lower end of this tube that the weight of which we have spoken is attached which gives the desired inclination to the globa.

This weight is designed to keep the hand constantly in the same place, and to compel the sphere, which is free, to turn in its stead, in the opposite direction. The tube to which the hand and the weight are fastened is provided with an oiled bearing so the clock easily gives the correct time. The circle marked with the hours is turned in such a way that the figure 12-that is noon -is always on the meridian of the place where the clock is; in this way, the hand remaining fixed, the time is indicated by the figures which slowly revolve one after the other.

Beside this, the rotation of the sphere brings the different meridians successively under the hand-that is, under the sun. The clock, therefore, not only gives the time of day where it actually is, but also shows whereabouts on the globe it is noon at the same moment.

Laughter an Aid to Digestion. Nothing else will take the place of

good cheer and laughter at meals or any other time in the home. There is a vital connection between amability and digestion-between good cheer and assimilation. Laughter is the best friend the liver has, and depression or melancholia, its worst enemy.

Numerous experiments have shown that mirth and cheerfulness stimulate the secretion of the gastric juices, and are powerful aids to digestion. Yet, knowing this, many of us sit as gloomy and absorbed at the table as at a funeral. In many homes, scarcely a word is spoken at meals outside of requests for an article of food.

The meal hour ought to mean something besides supplying a mere animal function. The bell which calls the family to the table ought to be the signal for a good time generally, when all cares should be thrown off and everybody appear at his best. It ought to signalize the time for mirth and laughter. It ought to be looked forward to by the members of the family as the recess or nooning is look forward to by pupils in school, as a lat-up from the strenuous life. -Success.

How Fish Sleep,

Fishes have no eyelids and necesearly sleep with their eyes open; they swallow their food whole, having no dental machinery. Frogs, toads and serpents never take food except that which they are certain is alive. Serpents are so tenacious of life that they will live for six months or longer without food.
