

THE WRIGHT BROS. AIRSHIP

Orville Wright Gives Details of the Machine's Construction.

PERFECT FAITH IN IT

Claims That the Aeroplane Differs From Other Flyers—More Complete Than any of Them—Confident That, Barring Accidents, It Will Satisfy the Government.

Dayton, Ohio, June 4.—Orville E. Wright of Wright Brothers, speaking of the Wright aeroplane said that he and his brother had solved the aerial navigation question to the extent that, barring accident, they were sure to fulfill their contract with the Government for a flying machine that will stay in the air one hour and travel a distance of five miles and return at the rate of forty miles an hour. Mr. Wright stated that he was confident the Wright aeroplane would make a successful flight at Fort Myers, notwithstanding condition of test ground which could hardly be more unfavorable.

"I believe that our machine is the nearest approach to the practical flyer in existence," said Mr. Wright. "The French who claim to be the greatest investigators of aerial navigation, are modeling all of their machines after the Wright type, as nearly as they can without infringing on our patents. With the exception of a few details of construction that necessarily have to be kept secret in order to protect the commercial value of our invention, practically every part of our machine has been patented in every country in Europe and America."

Mr. Wright says the Wright Aeroplane differs from other fliers in that it is much more complete than any of them.

"The Machine weighs about 800 pounds, and in addition to its own weight, including a four-cylinder motor of between 25 and 30 horse power, devised and made by the Wright Brothers themselves, can carry two men and fuel enough to drive the machine 30 miles. It can carry enough fuel with one man aboard to travel 500 miles."

In the tests at Kitty Hawk, the machine made a five-mile flight, traveling as high as sixty miles an hour. The Government's test is away below the machine's limit, according to Orville Wright. He says that the same model used in the Kitty Hawk tests will be used in the Government tests. The tests will have to be successfully made before Aug. 28.

Shoe Factories Resuming.

Marlboro, Mass., June 4.—The employees of the Diamond M. factory of the S. H. Howe Shoe Company were notified that the factory will go on a ten-hour-a-day basis at once. The Diamond M. factory of the same company which has been operating eight hours daily, will go on a nine hour schedule. About 1,200 hands are affected in the two factories. The L. B. Hall Shoe Company has resumed operations after a shut down of several weeks. The Rice & Hutchins Shoe Factory which has been running irregularly, has gone on a ten-hour schedule. It employs 800 hands. Business at other plants also is improving.

Water An Intoxicant Too.

Chicago, June 3.—Water intoxication induced by too copious use of water externally or internally, was pointed out by Dr. Lewis D. Mason of Brooklyn, N. Y., vice president of the American Society for the Study of Inebriety, Alcohol and Drug Neurosis, as being as dangerous as overindulgence in alcohol. "I have a friend who is a victim of aquamaia," he said. "He spends hours in a bathtub and drinks so much water that he has reduced the solids of his body and worked serious injury to himself. Many men and women drink too much water and are the victims of that form of intoxication."

\$11,000 For Retiring Mayor.

St. Paul, June 4.—A few minutes after Robert A. Smith had retired from the office of the Mayor of St. Paul he was handed an envelope containing a draft for \$11,000. This amount had been contributed by eighty-one business men of St. Paul as an appreciation of the venerable Mayor's services to the city. Mr. Smith is 81 and has had an office-holding record of fifty years in this county, fifteen years of which with the exception of one term, was spent in the Mayor's office. He would have left the Mayor's office penniless had it not been for the contribution.

Two Women for Delegates.

Colorado Springs, Col., June 2.—Colorado may emphasize the franchise for women in the State by sending two women delegates to the Democratic National Convention to be held in Denver in July. Following the movement on foot in Denver to seat Mrs. Ruth Bryan Leavitt, there is a strong undercurrent among the Democrats of El Paso County to tender the honor of delegate to the convention to Mrs. Margaret Howell Jefferson Davis Hayes of this city, the only living daughter of Jefferson Davis.

A Lazy Liver

May be only a tired liver, or a starved liver. It would be a stupid as well as a savage thing to beat a weary or starved man because he lagged in his work. So in treating the lagging, torpid liver it is a great mistake to lash it with strong drastic drugs. A torpid liver is but an indication of an ill-nourished, enfeebled body whose organs are weary with overwork. Start with the stomach and allied organs of digestion and nutrition. Put them in working order and see how quickly your liver will become active. Dr. Pierce's Golden Medical Discovery has made many marvelous cures of "liver trouble" by its wonderful control of the organs of digestion and nutrition. It restores the normal activity of the stomach, increases the secretions of the blood-making glands, cleanses the system from poisonous accumulations, and so relieves the liver of the burdens imposed upon it by the defection of other organs.

If you have bitter or bad taste in the morning, poor or variable appetite, coated tongue, foul breath, constipated or irregular bowels, feel weak, easily tired, despondent, frequent headaches, pain or distress in "small of back," snoring or distressed feeling in stomach, perhaps nausea, or "risings" in throat after eating, and kindred symptoms of weak stomach and torpid liver, no medicine will relieve you more promptly or cure you more permanently than Dr. Pierce's Golden Medical Discovery. Perhaps only a part of the above symptoms will be present at one time and yet point to torpid liver or biliousness and weak stomach. Avoid all hot bread and biscuits, griddle cakes and other indigestible food and take the "Golden Medical Discovery" regularly and stick to it until you are vigorous and strong. The "Discovery" is non-secret, non-alcoholic, is a glyceric extract of native medicinal roots with a full list of its ingredients printed on each bottle wrapper and attested under oath. Its ingredients are endorsed and extolled by the most eminent medical writers of the age and are recommended to cure the diseases for which it is advised. Don't accept a substitute of unknown composition for this non-secret MEDICINE OF KNOWN COMPOSITION.

Cheap Grain For Poultry.

It is said that the best way to dispose of damaged grain is to mix a little sound grain with it and sell it as "mixed poultry grain," and few poultry keepers are likely to contradict the statement. Just occasionally mixed grain may be worth buying, but as a rule it should be carefully avoided.

The poultry keeper should remember that it is not the bulk of grain that goes down the hen's throat that counts, but the feeding value of it. There is no feeding value to speak of in musty grain, and it is useless to expect hens to lay on it; and yet a large quantity of worthless grain is swallowed by fowls every year, and their owners think they are giving cheap food.

Wheat is an admirable poultry grain as long as it is sweet and sound, for there is next to no waste in it. Oats, on the contrary, carry a good deal of husk; nevertheless oats and wheat are the two best poultry grains, and the two all poultry keepers should chiefly rely on.

Grading the Honey.

When the first super is two-thirds or more filled, if the colony has not swarmed and the honey or nectar flow gives promise of continuing raise the super up and place one of empty sections under it, that is, place the super with the empty sections next the brood chamber. Put the first super with the partially filled sections on top. By the time the first or top super is finished the lower or second super, if the flow of nectar has continued, will be nearly finished. This in turn can be raised up and the operation repeated with the third super if the flow of honey will permit it, although this is seldom done in Colorado. If a fancy grade of white honey is desired the super should be removed from the hive as soon as the honey is fully capped or sealed.

Important Question.

How would you like to be your own horse?

Would you let the head of a rivet stand twisted in the harness till it tore the skin off?

Would you put a bridle on yourself that had a bladder that flapped you in the eye every time you made a step?

Now, would you?—Detroit News.

Good Rule in Irrigating.

As a rule new irrigators try to use furrows which are too long which results in too much water in the upper end of the field and too little at the lower end. The best plan is to have short furrows, gather up the waste water at their ends by waste ditches and redistribute it or carry it over some other field where it may run over a new set of furrows.

Animal Odors in Milk.

The old idea of animal odor in the milk has about been dissipated and it is concluded by some of the deepest thinkers and experimenters that the so-called animal odors are impurities arising from outside sources. When the milk is properly protected from all impurities, there is no danger of taint in the milk.

In Stacking Hay.

A serious and expensive mistake often is made in stacking hay by building several small stacks instead of one large rick. If forty tons of hay are to be stacked it is better to put it into two stacks of twenty tons each than to build eight small stacks of five tons each.
