All the very surgeons my breast was burned with caustic three time a day, and for sur it was dury syringing with a weak solution of utine a '1, and the eavity or inter uter was so large that it held ober an onne of the plution. The doctor probed the utary and examped the bone, and said the disease was advancing rapidly to the bring, and of it did not graspedly relief by medicine or, by an operadou, the result would be fatal. I was advised to have the breast landopel, and the bones examined I utilized indigno relief from what had be emplone, and decling I was tapidly getting worse. I almost despated of recovery, and considered my case nearly horeless.

Seeing various testimonials and certificates of cure by the use of Sand. It is now over eleven months since the cure was completed; there is shot the stightest appearance of a return. I therefore premance myself well, and the cure entirally effected by Sando' barsparilla, as I took as other medicine of any kind during the time I was using it, nor have I taken any since.
