A bill has been passed by Congress providing for the coinage of the 3 cent piece, which was discontinued some years ago. To remove the objection attached to the old coin, viz., the mistaking of it for a dime, the coin is to be unique. It is to be made of nickel, the size of the bronze cent, although thicker. In the centre is to be a hole one fourth of an inch in diameter. This will make the coin easily distinguishable by sight or touch.

Rev. Sam Jones says the whole trouble in Kentucky is whisky. "Why," said he, "anybody will fight when he gets Kentucky liquor in him. If a rabbit were to take two drinks of it he would spit in the face of a dog."

Kills Without Hitting.

What is lyddite? The high explosive thus called from the name of the small Kentish town and gunnery center where the experiments with it were made is nothing less than picric acid brought into a dense state by fusion. Picric acid is a bright yellow substance freely used in peaceful industries for dyeing purposes. It is obtained by the action of nitric acid on phenol or carbolic acid. It burns very violently, and, owing to the tremendous blast produced by the explosion, the destructive effect of a bursting shell filled with it is some 11 times greater than that of a shell filled with powder.

All lyddite shells are equipped with percussion nose fuses only; hence their explosion takes place on impact in the following fashion: The percussion fuse ignites a picric powder exploder, which in turn ignites the bursting charge of lyddite, the detonation of the fuse and of the two explosives inside the shell being instantaneous. The picric powder exploder, we should add, is inserted in a recess left in the lyddite for that purpose. Lyddite shell is to some extent less barbarous than shrapnel exploded by powder, for, though widespread, its death dealing effects are due more to air concussion than to the wounding effects of the flying fragments. In other words, in the case of a lyddite shell bursting in a group of men, the greater number will be killed not by pieces of the shell, but by the blow of the suddenly compressed air.

One of Lamb's Pranks.

A pretentious poet got his verses submitted to Charles Lamb by a friend just before the poet was to meet Lamb at dinner. Lamb found the verses to be feeble echoes of other poets, and when the author arrived he was seen to be as empty as his verses. This awakened Lamb's spirit of mischievous wagery. At dinner he said in the course of conversation: "That reminds me of some verses I wrote when I was young," and then he quoted a line or two which he recollected from the poet's book, to the latter's amazement and indignation. Lamb was diverted immensely, but kept perfectly serious and quoted more lines in connection with another remark, begging the company to remember how young he was when he composed them. The author again looked daggers at him.

Lamb capped all by introducing the first lines of "Paradise Lost" ("Of man's first disobedience," etc.) as also written by himself, which brought the poet to his feet, bursting with rage. He said he had sat by and allowed his own "little verses" to be appropriated without protest, but when he saw Milton also being pilfered from he could sit silent no longer. Lamb reveled in telling this story.—Rev. David Macrae in "English Humor."

Influenza Caused by Ozone.

On one occasion the writer walked to the edge of Lake Michigan when a strong wind was blowing right from the lake. The bodily condition was as near perfect as could be, and yet in less than five minutes there was every evidence of having caught cold. The severe influenza continued until, on walking away, in less than 500 feet it disappeared as if by magic.

It is very certain that the temperature had nothing to do with this nor the wind, but the influenza was directly due to the abundant ozone in the air. By inquiry it was learned that hundreds of residents who had lived upon the immediate edge of the lake had been obliged to move back three or four miles in order to relieve themselves from such experiences.

Physicians readily admit that it is not always possible to say when one "catches" cold. It certainly cannot always be because of undue exposure or change in temperature, but probably also to changes in the electric condition of the air. Facts of this kind should lead to the extreme caution in studying any supposed relation between the weather and health.—Popular Science.

Two Eating Stories.

At Somersley we used constantly to meet Tom Price, a great friend of the Barrington family, a fine rider and very greedy. One day, eating a good dinner, he said, "This is my idea of heaven."

"Yes," said a neighbor, "such a dinner as this without money and without price?"

He always reminded me of the greedy man who, coming down stairs in the morning before breakfast, said, "Food has not passed my lips since last night, and tomorrow will be the third day."—"Sir Algernon West's Recollections."
