

Apes and Beards.
 Almost all apes have beards. Darwin says that gorillas, chimpanzees and orang outangs have also stiff and bristly hairs upon their upper lips, resembling cats' whiskers. The beards of apes possess a remarkable resemblance to those of men, in being almost invariably lighter in color than the hair of the head. In apes the chin growth is most frequently yellow or red, becoming white in age. It is common to both sexes, although more strongly developed in the male. Apes—and monkeys also—have eyebrows as well, which do not grow thickly together as in human beings, but are scattered through the hair, covering the part of the face which would be called the forehead in man.
