"Does your wife talk in her major? "No, I talk in her sleep—it's the only chance I get."

SHE COULD NOT WALK

For Months-Burning Humor on Ankles -Opiates Alone Brought Sleep -Eczema Yielded to Cuticura.

"I had eczema for over two years. I had two physicians, but they only gave me relief for a short time and I cannot enumerate the ointments and lotions I used to no purpose. My ankles were one mass of sores. The itching and burning were so intense that I could not sleep. I could not walk for nearly four months. One day my husband said I had better try the Cuticura Remedies. After using them three times I had the best night's rest in months unless I took an opiate. I used one set of Cuticura Soap, Oint-ment, and Pills, and my ankles healed in a short time. It is now a year since I used Cuticura, and there has been no return of the eczema. Mrs. David Brown, Locke, Ark., May 18 and July 13, 1907."

A MICROMETER.

Instrument for Delicate Measurements Which You Can Make.

It often becomes necessary for the experimenter or practical worker to find the thickness of material so thin, or inconvenient to measure, that the thickness cannot be found by means of foot rule or other common measuring device. A simple, fairly accurate and easily made apparatus of the mi-crometer form may be constructed as follows, explains Dr. Thomas R. Baker

in Scientific American. Get a common iron or brass bolt about one-quarter of an inch in diameter and 21/2 inches long, with as fine a thread as possible, and the thread cut to within a short distance of the head of the bolt. A bolt with a cut in the head for a screw driver should be used. Clamp together two blocks of wood with square corners about one inch wide, three-quarters of an inch thick and 21/2 inches long, with their narrower faces in contact (the width of the clamped blocks being two inches), and bore a quarter-

A Home-Made Micrometer

inch hole through the center of the blocks in the two-inch direction. Now remove the clamp and let the nut of the bolt into one of the blocks so that its hole will be continuous with the hole in the wood, then glue the blocks together with the nut between them. Cut out a piece from the block combination, leaving it shaped somewhat like a bench, and glue the bottoms of the legs to a piece of thin board about 21/2 inches square for a support. Solder one end of a stiff wire about two inches long to the head of the bolt at right angles to the shaft and fix a disk of heavy pasteboard with a radius equal to the length of the wire, and with its circumference graduated into equal spaces, to serve in measuring revolutions and parts of revolutions of the end of the wire, to the top of the bench; put the bolt in the hole, screwing it through the nut, and the

construction is complete.

The base is improved for the measuring work by gluing to a central section of it, covering the place where the end of the bolt meets it, a small piece of stiff metal; and it is convenient to have the graduated disk capable of rotating, so that its zero line may be

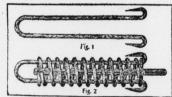

made to coincide with the wire.
Find the number of threads of the screw to the inch by placing the bolt on a measuring rule and counting the threads in an inch or half an inch of its length. The bolt in making one revolution will descend a distance equal to the distance between the threads.

To use the apparatus, put the object whose thickness is to be measured on the base under the bolt, and screw the bolt down until its end just touches the object, then remove the object and screw the bolt down until its end just touches the base, carefully noting while doing so the distance that the end of the wire moves over the scale. The part of a rotation of the bolt, or the number of rotations with any additional parts of a rotation added, divided by the number of threads to the inch, will be the thick ness of the object. Quite ac measurements may be made with this instrument, and in the absence of the expensive micrometer it serves a very useful purpose. I have used it in the beginning classes in electricity for measuring the diameter of wire for finding the numbers of wires from reference tables and for making various other measurements.

HOME-MADE DRAFT SPRING.

How One Can Be Made from Old Machinery Spring.

A draft spring for use on the evener or tongue of agricultural implements, to relieve the jerk on the horses' shoulders, may be made from any old

constant operation.

TO MAKE CONCRETE STEPS.

Directions for Putting in a Permanent Improvement.

Concrete may be used in the construction of steps, particularly in damp places, and in the open or where the ground is terraced, concrete steps and walks can be made exceedingly attractive. Where the ground is firm it may be cut away in the form of steps, with each step cut two or three inches lower than its finished level.

When the nature of the ground will not admit of its being cut away in the form of steps, the risers are molded

Reinforced Concrete Steps

between two vertical forms. The front one may be a smooth board, but the other should be a thin piece of sheet metal, which is more easily removed after the earth has been tamped in behind it, says the Concrete Review. A simple method of reinforcing concrete steps is to place a half-inch steel rod in each corner, and thread these with quarter-inch rods bent to the shape of the steps, as shown in the sketch, placing them about two feet apart. For this class of work a rich Portland cement concrete is recommended, with the use of stone or gravel under one-half inch in size. Steps may be given one-half inch wearing surface of cement mortar mixed in the proportion of one part cement to two parts sand. This system is well adapted for stairways in houses.

SCOOP THAT WEIGHS.

Does Away with the Necessity of Employing Counter Scales.

Every grocer can scoop up sugar or coffee, etc., from the storage bin and very closely gauge the correct quantity. Yet he would not be willing to give it to the customer as the weight to be purchased without first testing it on the scales. A Texas man has hit upon the idea of having the scoop indicate the weight of the contents, eliminating the necessity o transferring it to scales. His weighing scoop is shown in the accompany-

Scoop Which Indicates Weight.

ing illustration. The pan for gathering up the article to be weighed is pivoted to the handle and operates a pointer, which indicates the weight of the contents on a scale. If a pound of sugar is wanted the grocer dips enough out of the bin to swing the pointer to the pound mark. The sugar is then transferred directly to a bag, doing away with the necessity of weighing on scales.

TESTING A BRIDGE.

Severe Strain Placed Upon the New Rodah Bridge at Cairo.

The Rodah bridge at Cairo is practically finished as far as the structural work itself is concerned. This bridge is now undergoing the official tests, but it will not be publicly opened to traffic until the terminals of the structure are finally completed, to-gether with the approaches at one end. This is a work that will probably take some time to accomplish. The tests are of a severe character, dead weights of sand and steel rails being piled up on each pier in succession, exerting a pressure of 1,000 tons. Subsequently live weights of steam rollers and tramcars loaded with sand and water carts filled with water are to be run on the bridge, with a total pressure of 460 tons on the main girders. The tests so far have been, so we gather, satisfactory in their results. No fault or strain has been revealed in the material.

How Ancients Did.

By rubbing metals with salt, before applying mercury, the ancients obtained a reaction similar to that for which copper sulphate is used. chlorine released from the salt formed a silver chloride easily attacked by the mercury, so as to form an amalgam.

CARE OF THE KITCHEN

Clean Walls Are an Essential to Sanitary Cooking.

It is not only important to know how to cook, but it is equally important to know where to cook. Cooking in a dirty kitchen can never produce good food. The idea is simply preposterous, yet kitchen walls are left for months-sometimes for years without cleansing.

In the first place the kitchen wall should have a light tint that the merest fleck of dirt can be seen; that the sheerest cobweb can be brushed away; that the tiniest water bug can be discerned. It is all folly expecting clean food in a kitchen with dirty

Never put a wall coating on a kitchen wall that is mixed with hot water or that has glue in it, or sour milk in it if mixed with cold water. Glue walls made from horses' hoofs colored up with cheap colorings do not indicate good housekeeping. The glue is constantly flecking off, falling into the food and the idea of food flavored with glue made from horses'

hoofs is not appetizing.

Kitchen walls to be thoroughly satisfactory should be alabastined the same as every other wall in the house. They should be coated regularly in the spring and fall of each year with a light tint.

year with a light tint.

The care of the pantry requires constant attention. The walls should be brushed over every year, the dishes removed from the shelves which should be thoroughly wiped with hot water. If there are antholes or any other insects in the pantries of the wall coattries as thick putty of the wall coattries as thick putty of the wall coattries. tries a thick putty of the wall coating can be made and all the ant holes, even small mice holes can be filled with it which will protect the pantry from the incursions of disagreeable insects and mice.

STILL HAD USE FOR BOOTS.

Kafir's Newly-Acquired Treasure Put to Queer Use.

An army officer in charge of a native district in South Africa presented to the kafir boy who acted as his par-ticular servant a pair of strong, heavi-

ly nailed army boots.

The boy was delighted with the gift, and at once sat down and put the boots on. They were the very first "Well," replied Knox, quietly, "he's pair he had ever had in his life, and for several days afterward he strutted proudly about the camp with

But at the end of the week he appeared as usual with bare feet and the boots tied round his neck.
"Hello!" said his master. "Why

don't you wear your boots? Are they to small for you?"

"Oh, no, sah," replied the kafir, "they plenty big. Berry nice boots, sah, but no good for walking or running. Make um fellah too much slow, Keep boots now for wear in bed."-London Answers.

Valuable Recipe When Afflicted With Rheumatism or Backache, Also Splendid Tonic.

At the first sign of rheumatic pains or backache, or a feeling of being generally run down and weakened, the following simple prescription should be used:

"One ounce compound Syrup Sarsaparilla; one ounce Toris Root compound; half pint high grade whiskey. Mix them and shake well. Take a tablespoonful before each meal and at bed time. The bottle must be well shaken each time."

Any good prescription pharmacy can supply these ingredients and it will be found inexpensive considering

its wonderful merit.
This treatment will eradicate the acid poisons from the blood and build up the system to its normal healthiness. The splendid effects will become manifest after the first few doses, but it should be continued for east a month, or until the person has fully regained health. The worst cases of rheumatism are bound to yield to this treatment.

Treadmill Still in Use.

The barbarous custom of using convicts in treadmills is still practiced in some English prisons, declares Popular Mechanics, and an interesting picture shows the convicts at this trying task. The speed is about 30 steps a minute, and if a man misses a step a cross-bar strikes the calves of his
