EXCELLENT METHOD OF ROTATING HOG PASTURES HE ALSO SPEAKS WELL OF CAN-

Illustration of Forty Acres Divided Into Four Equal Parts, All Enclosed with Permanent Wire Fence-Produce Pork Cheaply.

Subdivided Hog Pasture.

We hve set apart a 40-acre piece then barley and seed down.
of land 80 rods square that we will in The great advantages of this rotathe future use exclusively as a rotation of hog pastures. As indicated by produce pork very cheaply; we can the accompanying illustration, the 40 produce it with a very small amount acres is divided into four equal sized of labor, as we let the hogs do their fields with a lane two rods wide be-tween each field, leaving each field exactly 18½ rods wide and 80 rods long, writes L. P. Martiny, in Homestead. These four fields are inclosed with a permanent fence. In our case, great range, their change of pasturage raising hogs entirely for breeding pur- and the changing of their pastures we use a woven wire with nine longitudinal bars 36 inches high. All corner and end posts are se cured in position by digging the post hole in the ordinary manner to the depth of four feet. The post is then put in position and the hole filled with wet concrete mixed in the proportion of one part best Portland cement to eight or ten parts of good, clean, coarse gravel. This may seem like a very small-proportion of cement, and it certainly would be for ordinary con crete work, but being in the ground it cannot get away and forms a perfect-ly hard mass, which is all that is required. We reinforce this concrete by putting in a couple of coils of two to three strands of old barb wire to hold the whole mass intact, as it has a tendency to crack or split by the great strain we put on the post in stretching the fencing. With the use of this concrete we use no brace or brace posts whatever to support the end posts, thus simplifying the construction of the fence to a considerable ex-tent. Besides the posts will be pre-served longer in the concrete than if

Each field has six gates at equal disances apart along one side of the pasture and a large post is set in con-crete in the fence on the other side of the field, opposite each gate so that a temporary fence may be placed between one of the gate posts and the post on the opposite side of the field, thus sub-dividing each field as occa-sion may demand. We aim to divide our pigs so that there are not more than 20 to 25 pigs in each lot.

Our plan of rotation is to have a piece of new seeding of a mixture of medium and alsike clover with a little timothy as a pasture for the pigs. In the next lot we sow Canada field peas, which thrive very well in our climate and soil. On our soil we prefer to leave the land fall plowed. As early in the spring as the land is ready to work we disk the land in good shape work we disk the land in good shape and sow the peas with a drill, at the rate of 2½ bushels per acre, drilling them in as deeply as possible and finishing with a fine smoothing har-

From the tenth to the fifteenth of aly the peas will be full grown and the peas begin to harden, at which we turn the pigs into the field of peas to hog them off, still allowing them the run of the clover pasture. This field of peas with the addition of very little or no other feed will last the pigs very nicely until about the middle of September, when the pigs will be in a very thrifty condition; showing great development of bone and muscle on account of the rich protein feed furnished them by the peas

In the next field to the peas we of corn which will come to perfect maturity by the middle of Seotember or first of October. This corn field will be where we had the clover pasture the year previous, which will put it in fine condition for the crop of corn. We lay the corn by rather early, cultivating it the last time soon after the first of July, and sowing about five pounds of rape seed per acre at the last cultivation. The pigs are turned in the field of corn from September 15 to October 1, when they are in just the right condition t σ make very rapid and cheap gains. The rape in the corn will make a good growth during a favorable season and will serve as a raviety and relish for the hogs away on into winter. In the fourth field, which will be where we grew peas the year previous, we will sow barley and seed down to clover and timothy with the barley. We harvest the barley in the usual manner, thresh and grind it. The reason we use barley in this field is because it is about the safest crop to seed which we have, and we are very anxious to get a good catch of

own harvesting, and we have considerably less feed to haul to them than where they are hand-fed entirely: and lastly, our hogs are maintained in a

RELIABLE DATA REGARDING FEED

Experiments to Obtain Best Method of Feeding Steers Briefly Summarized— "Long-Fed" Best.

(BY PROF. J. H. SKINNER, INDIANA EXPERIMENT STATION.) Experiments to obtain reliable data regarding the best method of feeding steers, considering the length of the feeding period, show the following

results briefly summarized:
A short feeding period necessitates the purchase of heavy fleshy steers which would usually be marketed as killers

"Short-fed" cattle consume a greater proportion of concentrates to roughage than "long-fed" cattle.

"Short-fed" cattle made a greater daily gain per head than "long-fed" In the first test the total amount of

corn necessary to finish each steer was 34 bushels in the "short-fed" lot and 54.6 bushels in the "long-fed" lot; in the second test 42.5 bushels in the short-fed" lot and 61.1 bushels in the

During the period when both lots of cattle were in the feed lot there was a greater profit per head from feed-ing the heavier, fleshier steers.

In the first test the margin neces sary to prevent loss on the "short-fed" cattle at the time of marketing was 48 cents per 100; on the "long-fed" cattle at the same time 50 cents, and on the "long-fed" cattle at the time of marketing \$1.04 per 100.

In the second test the margin neces sary to prevent loss on the "short-fed" cattle at the time of marketing was 92 cents per 100; on the "long-fed" cattle at the same time \$1.01 per 100, and at the time of marketing \$1.54 per 100.

The cost of gains was cheaper on the thinner cattle during the first three months of the test, but when fed to the same marketable finish the cost of gains was practically the same,

In short-feeding cattle for late summer and fall markets it is necessary to start with very fleshy feeders of excellent beef type in order that they will not sell in competition with western grass-fed cattle.

Additional data will be necessary before definite conclusions may be drawn as to the profits resulting from these two methods of feeding, due to the many variable factors which have a direct bearing on the profit and loss in cattle feeding.

Easy with the Nersous Horse.

To cure a "scary" or nervous horse none but gentle measures are of any use. To whip a horse for shying at an object only makes him the more afraid of it, as of course he will connect the whipping with it.

Sometimes horses are made scary by having their foretops hanging over their eyes, which gives objects the appearance of moving.

When a horse shies at an object speak kindly and reassuringly to him and gently arge him up to it, let him smell of it and see that it does not hurt him. He will soon learn to have more confidence both in himself and

Water Always.

The egg is over 60 per cent. water, Therefore, it is very important that the fowls be supplied with abundance of water summer and winter. Certain experiment stations have found that no better results can be gotten from warming the water in winter than if the clover seeding. In this rotation it is given right from the well. Many we have, first, clover pasture one year, have the idea that it rays, but this then core, then Canada field peas, seems to prove that it descent.

UNCLE JOE CANNON

No matter what may be the opinion of Mr. Joseph Cannon, no matter if he may be looked upon by some as a czar, and by others as a big warm hearted man, with many of the instincts that make humanity very bearable, all will admit that he is a man who has been advertised more than any other man in the United States. What he may have to say therefore on any subject, will have weight. Ob servant, he speaks his mind freely. He was interviewed the other day by the correspondent of a Canadian newspaper. He spoke of his admiration for Canada, and he is quoted in a way that pictures farily well the personat of the man. The correspondent says he launched out into personal biography, proverbial philosophy, political comment, cynical scorn, broad profanity and sentimental poetry such as one rarely hears in the space of an hour. He discussed the Canadian ta-riff, and then said: "People say I break the Ten Commandmants, all of them. But I don't, at least not often. I did break one of them up in Canada two or three years ago. As I rode from Winnipeg to the Rockies over your great West and saw the finest wheatfields in the world, I thought of Virginia and a lot of our States, and I smashed the Tenth Commandment every hour of the journey. Yes, sir, I coveted my neighbor's land." Coming from a man of the fame of Mr. Cannon, these were words that should have some weight with the Americans who may still have doubts of the advantages that are offered to them in Western Canada. A home amongst the wheatfields. Hundreds of thousands of Americans are adopting it. They go to Central Canada, to any one of the three Provinces of Mani-toba, Saskatchewan or Alberta, or to the Coast Province of British Columbia, take up their homestead of 160 acres, and probably pre-empt another 160 acres, or it may be they do not care for pioneering twenty or thirty miles from an existing railway, and purchase a farm. Then they settle upon it and, having no clearing away of timber they begin at once to cultivate it, and make money. That they make money and much more than they could possibly make on the highpriced farms they have left, is the evidence of hundreds of thousands They do not leave civilized life, they but remove from one sphere to another. They have splendid social conditions, churches, schools, rural telephones, splendid roads, railways, convenient just the same as what they left, and what is more, they get much greater returns from their crops, which give abundant yield. The cli-mate is perfect, and it is no wonder that most flattering reports are sent back to their friends in the States, and it is no wonder that Joe Cannon was tempted to speak as he did. 'He

"coveted" his neighbor's land. His Views on Suffrage.

When a female canvasser asked an old farmer to sign a petition in favor of a woman's movement he eyed the document for a while with suspicion. "No, I'm again' it, sure," was the reply, with the emphasis of a man who had had some domestic infelicity. "A woman who's allus a-movin' is allus agettin' in trouble. If you've got any thing to keep her quiet I'll sign it."— Ladies' Home Journal.

The Overland The King of Cars

No other car has so large a sale--none has made such amazing records. Price, \$1,000 up.

It requires four factories, employing 4,000 men—turning out 140 Overlands daily—to meet the flood-like demand for these cars. Yet two years ago a hundred rivals had a larger sale.

The reason lies largely in the car's

utter simplicity. Its able designer made it almost trouble-proof.

He created an engine which, for endurance, is the marvel of engineering.

neering.

He designed the pedal control.

One goes forward or backward, slow
or fast, by merely pushing pedals.

The hands have nothing to do but

A child can master the car in ten minutes. A novice can drive it a thousand miles without any thought of trouble.

The Overland always keeps going, and almost cares for itself. All the usual complexities have been elimi-

That is why each car sells others, and our orders for this year's Overlands amount to \$24,000,000.

Another fact is that no other car gives nearly so much for the money. This is due to our enormous output, and the fortunes invested in our automatic machinery. It would bankrupt a smaller maker to try to compete with his pete with us.

pete with us.
You can get a 25-horsepower Overland, with a 102-inch wheel base, for \$1,000. You can get a 40-horsepower Overland, with a 112-inch wheel base, for \$1,250. The prices include lamps and magneto.

and magneto.

This car, which has captured the country, is the car you will want when you know it.
