

Ostrich Feathers

There seems to be something irresistibly attractive to women in the fluffy, nodding plumes of the ostrich, and if this great bird could not be bred on ostrich farms his race would become extinct.

Although good ostrich plumes are as costly as ever, they are in wider demand than in all the history of millinery. Everyone wants plumes, and other ostrich feathers, in all the varied beautiful mountings which the artists make them up.

There is a wonderful variety to choose from. The introduction of "willow" plumes, that is those having the flues lengthened by tying on extra pieces, has brought out all sorts of color combinations and plumes of long sweeping fibers. They are very beautiful but not as practical as the unpeeped plumes.

can be cleaned and recurred at a comparatively small outlay and may be bought on a guarantee from the dealer that they will stand wear. Moisture doesn't do them any permanent harm. On the other hand the willow plume cannot be guaranteed to wear. Those in black are especially fragile, something in the dye causes them to come untied or to break off when the air is damp.

When one does not need to think of economy there are beautiful effects to be wrought out by using plumes with pieced flues, which are well worth the price.

Three fall hats are illustrated here showing the simplicity and richness of ostrich used for trimming. They are mounted in groups of three or more toward the back of the hat as a rule. Nothing else is needed on the shape and the addition of a band and bow about the crown is a matter of choice, for a shape bearing a full tuft of plumes is amply trimmed.

JULIA BOTTOMLEY.

NEW TOUCH IN JEWELRY

Quaint Idea That Has Only Recently Made Its Appearance, and is Welcomed.

Jewelry, at any rate, in our loose acceptance of the term, for no stones are visible in this pretty fancy. I have spoken of the gold lace pins crocheted with lace. Now far-seeing manufacturers have brought out wooden ornaments in all manner of sorts and shapes—collar pins, hat pins, belt buckles, cuff links, slipper buckles—all to be covered with this crocheted lace.

If crocheting is not in your line, fine lace can be darned around these wooden foundations, of dotted or figured net may be used instead. Whatever material is used, they are as quaint and pretty as the lace-covered gold pins, which is saying a great deal.—Exchange.

PRETTY FANCY OF FASHION

Jeweled Laces Are Marvelously Beautiful, Though Only for Those With Long Purses.

The very newest thing in jewelry is the reproduction of old and priceless laces in tiny pearls and diamonds mounted upon gunmetal, platinum or diamond net. The exact pattern of the lace is copied, and the whole is formed into a jabot or a lace fall for the collar. Sometimes there is a bow above, composed of some colored stones—emeralds or amethysts or rubies—set in solid.

This new and wonderful work has revolutionized the art of the jeweler, since the workmanship has become quite as valuable as the stones themselves. These laces of jewels are, of course, ruinously expensive, but they are such marvels of beauty that a woman might well dispense with all other ornament for the sake of possessing one of them.

The Swan-Like Throat.

This is to be a great season for collarless frocks.

But one pretty neck is often harder to acquire than the dozens of chemisettes we may have done away with.

A good neck depends much upon the general health, but considerable may be done that is of direct benefit.

Many an otherwise lovely neck is ruined by an awkward poise of the head. The best cure for this is to sit or walk each day with a book on the head. Do not stiffen the muscles to hold this weight. Manage it by balancing.

Thinness of the neck should be an easy fault to overcome.

Plenty of sleep and an abundance of milk, with raw eggs beaten up in it, should help considerably.

The neck should be washed well every night with warm water, followed by a cold spray and massaged afterward with a cold cream.

Low-Cut Neck Edging.

A ready-made dress of dark blue lawn seen recently had at the round Dutch neck a tiny piping formed from the edge of a fine hemstitched handkerchief. The effect was cool and dainty, "and the handkerchief had point on it, anyway," said the bright originator.

Bracelets Over Gloves.

Few women seem to realize that bracelets over gloves are almost or quite as bad as rings over gloves. If one wears a bracelet with long gloves at all, it should be worn under them; but, if possible, it should not be worn.

CHIC TUSSOR FROCK

This illustration shows a simple but good looking frock for a young girl made from Tussock silk and trimmed with spotted satin braid and Guipure collar. The belt of studs matches the ground of trimming.

IMPROVED AND ADEQUATE VENTILATION FOR STABLE

Illustration Shows How Air Is Pumped From Building at All Times, Regardless of Direction in Which Wind Is Blowing

The usual method of stable ventilation is to place flues with outlets terminating in a shaft through the roof and surmounted by a plain cupola or cover with a cap a foot or so above the opening. The idea in the latter case is that the wind will blow between the cap and the top of the shaft as shown at B in the illustration herewith, says American Agriculturist. This method tends to increase the flow of vitiated air from the stable and thus aid the ventilation, pure air coming in from inlet flues placed at somewhat remote points from the outlets.

Whether this method is fully satisfactory is not certain, for at times when the wind is gusty the vitiated air is forced back into the stable instead of being drawn out, and often snow and sleet are drawn down the shaft. To overcome the uncertain working of this kind of shaft, as well as other disadvantages of the plain cupola, the style of cupola shown at C with sides opening in the direction

ventilation is concerned, the principal point is the retention of wind force to assist in ventilation when only the animal heat in the stable is available to produce ventilation. The assistance of the wind is of great service and should be taken advantage of as much as possible. A method of securing this advantage is shown in the large picture herewith. As the ventilator shaft terminates in a square, rather high cupola twice the size of the shaft. Openings of reasonable size are made opposite each other in the walls of this cupola and in line with the prevailing winds, as shown at a. Doors are made to fit these openings, connected as shown at b and hung from a crosspiece below the roof of the cupola. Near the bottom of the cupola are two or three holes about 2 inches in diameter depending on the size of the cupola. The ventilator shaft as shown at c extends above these openings but terminates slightly below the larger ventilator openings.

In operation, the door closes as shown at a on the right, and opens on

Features of Stable Construction.

of the prevailing winds and covered with doors hinged at the top but swinging freely, has been used with success. When there is no wind the doors hang so that the cupola is partly open on each side, but as shown in the illustration, when the wind blows from the right, the door on that side is closed by the force of the wind. The other side, however, is open and there is always a chance for the stable air to pass out and no chance for rain or snow to blow down the shaft. If desired, doors can be placed on all four sides of the cupola.

Though this arrangement is satisfactory so far as removing outdoor influences from the interior system of

the left; at the same time a current of air passes in on the right at e and as shown by the arrows passes out on the left, at the same time drawing a current of air through the ventilating shaft at c. The same object would be secured if the wind blew from the opposite direction. It is important that the cupola be divided into two sections as shown at d so that the wind cannot pass directly across from the hole e to the opposite side. If desired, four compartments may be made as shown at e so that the wind may be admitted on two sides of the cupola so that there would be suction to this draft, no matter from what direction the wind might come.

PERFECTING HOOF OF HORSE

A foot with too much growth on fore part of hoof, which is apt to cause slow hitting, is shown in the illustration. The remedy is to pare off as indicated by line and fit a leather pad under rear part of hoof.

A foot of correct proportions is shown in the second illustration. A line drawn from front part of leg strikes a little distance behind the center. The bones are at the proper angle affording strength and free action in traveling.

CHANGE SHEEP PASTURE OFTEN

Breeders Must Practice Method of Dividing into Small Lots of Ewes and Lambs Kept Healthy.

(By W. M. KELLEY.)

The more I study the sheep business and the more carefully I note the results of my own experience and observation, the more I am coming to appreciate the frequent change of pastures for the ewes and lambs. It costs money to change our system of pasturing sheep and divide our pastures up into small lots, but we must practise this method if we succeed in keeping our sheep and lambs free from stomach worms.

We know that these worms come from the sheep to the lambs through the grass that is eaten. We know that it takes a certain time for the germs when dropped on the grass to develop enough to get to the lambs. That time is estimated to be from eight to 12 days. We know that the lambs are born free from parasites. We know that it is possible to keep the mothers quite free from parasites before the lambs are dropped.

By putting what facts we know together we can readily see that if we change pastures frequently, say every eight to 12 days, we will lessen the danger of the lambs becoming infected with these germs through the grass that they consume. Some of

the highest authorities advise allowing the lambs to run ahead of the ewes and moving the ewes one pasture ahead each week, thus the ewes and lambs are changed every week.

Pasteurizing Milk.

To pasteurize milk or cream is simply to heat the same to about 160 degrees, then rapidly cool the liquid. By this process the lactic germs or germs which cause milk to sour are destroyed, but the germs which cause milk to become putrid are not destroyed. Experts claim the danger is that dirty milk may be pasteurized, hence the operation may be dangerous or, at least, disappointing from the reason that one cannot tell just when putrefaction may take place. The latter cannot be detected until it reaches an advanced age, as pasteurized milk or cream may never grow sour, yet may contain germs fraught with danger. Many physicians also claim that pasteurization reduces the digestibility of the milk or cream.

Currants and Gooseberries.

A. Hittinger is an extensive grower of currants and gooseberries. He lives five miles from Boston. Every plant is propagated on the farm. He has a beautiful nursery of currants, the plants being very thrifty and vigorous. Both of these fruits root readily from hardwood cuttings. They should be cut in the fall, stored in a moist cellar or buried and planted as soon as the ground can be prepared in the spring.

TERRIBLE CASE OF GRAVEL

Baker City, Ore., Man Suffered 25 Years.

Charles Kurz, 1618 Center St., Baker City, Ore., says: "For 25 years I suffered agony from gravel. So intense was the pain when the stones were passing, that I had to lie on my back and brace my feet, often being forced to scream. On one occasion two stones became lodged and I could not pass the urine for two days. I spent hundreds of dollars without relief. At last I began taking Doan's Kidney Pills. They are the only remedy that wards off these attacks."

Remember the name—Doan's. For sale by all dealers. 50 cents a box. Foster-Milburn Co., Buffalo, N. Y.

Tuberculosis in the Prisons.

The fact that 100,000 prisoners are discharged from the jails and prisons of the country annually, and that from 10 to 15 per cent. of them have tuberculosis, makes the problem of providing special places for their treatment while they are confined a serious one. So important is the problem that the Prison Association of New York in cooperation with the State Charities Aid Association, is preparing to inaugurate a special campaign for the prevention of tuberculosis in the penal institutions of the state, and will seek to enlist the co-operation of all prison physicians and anti-tuberculosis societies in this work.

Women Save Money.

Women are natural money-savers, no matter how much is said about what they spend for dresses and hats. They always know how to make a dollar go the farthest. That's why thoughtful women discover that by using Easy Task soap in their laundry work they save fuel and time and trouble and health and more than that, they save the clothes that are washed. Easy Task has no rosin in it to stay in the clothes and hold the dirt with it and rot the fabric.

Hard to Convince.

Little Tommy (eldest of the family, at dinner)—Mamma, why don't you help me before Ethel?

Mamma—Ladies must always come first.

Tommy (triumphantly)—Then why was I born before Ethel?—Tit-Bits.

Important to Mothers

Examine carefully every bottle of CASTORIA, a safe and sure remedy for infants and children, and see that it bears the

Signature of *Wm. D. Hooper* In Use For Over 30 Years. The Kind You Have Always Bought.

To harbor fretful and discontented thoughts is to do yourself more injury than it is in the power of your greatest enemy to do you.—Mason.

Mrs. Winslow's Soothing Syrup. For children teething, softens the gums, reduces inflammation, always cures wind colic. See a bottle.

Woman's inhumanity to man makes countless divorce lawyers happy.

WESTERN CANADA'S 1910 CROPS

Wheat Yield in Many Districts Will Be From 25 to 35 Bushels Per Acre

Land sales and homestead entries increasing. No cessation in numbers going from United States. Wonderful opportunities remain for those who intend making Canada their home. New districts being opened up for settlement. Many farmers will not, this year, \$10 to \$15 per acre from their wheat crop. All the advantages of old settled countries are there. Good schools, churches, splendid markets, excellent railway facilities. See the grain exhibit at the different State and some of the County fairs.

H. M. WILLIAMS, Law Building, Toledo, Ohio

WITH A JAR OF RESINOL. ECZEMA, BRUISES, BURNS, SORES, CHAFING, ABRASIONS, ITCHING, RING WORM, DANDRUFF, HAIR LOSS, CHAPPING, ABRASIONS. In the house you have a quick, certain remedy for all kinds of Skin Diseases. A few applications will relieve the worst cases of itching piles. 50 cts. a Jar of all Druggists, or sent direct on receipt of price. RESINOL CHEMICAL COMPANY, BALTIMORE, MD. Resinol Medicated Shaving Stick makes shaving easy.

Rockefeller's Hard Shot. John D. Rockefeller tried a game of golf on the links near Augusta. On a rather difficult shot Mr. Rockefeller struck too low with his iron, and as the dust flew up he asked his caddy: "What have I hit?" The boy laughed and answered: "Jaw-jah, boss."

When Rubbers Become Necessary. And your shoes pinch, shake into your shoes Allen's Foot-Powder, the antiseptic powder for the feet. Cures itching, aching feet and takes the sting out of Corns and Bunions. Always use it for breaking in New shoes and for dancing parties. Sold everywhere 25c. Sample mailed FREE. Address, Allen S. Olmsted, Le Roy, N. Y.

Hot Sun—Dusty Roads. By the time you reach town and light you'll be hot and tired and your throat dry with dust and dirt. Hunt up a soda fountain and treat yourself to A Glass of Hot or Cold Coca-Cola.

Run-Down? Tone the nerves, strengthen the stomach, purify the blood and get a fresh grip on health by taking Beecham's Pills.

STOCKERS & FEEDERS. Choice quality; reds and roans, white faces or angus bought on orders. Tens of Thousands to select from. Satisfaction Guaranteed. Correspondence Invited. Come and see for yourself.

DYSPEPSIA. "Having taken your wonderful 'Cascarets' for three months and being entirely cured of stomach catarrh and dyspepsia, I think a word of praise is due to 'Cascarets' for their wonderful composition. I have taken numerous other so-called remedies but without avail, and I find that Cascarets relieve more in a day than all the others I have taken would in a year."
