NEST HIDING.

The little spot of land rising in the South Seas called Ysabel Isle is divided among several savage tribes that are continually at war with each other. A terrible massacre occurring in a portion ing in houses built in high trees, though living by day in the ordinary open bamboo huts. When the Rev. Coleridge Patterson, Bishop of the Melanesian Islands, visited Mahaga, he was very curious to inspect these human nests in the summits of the loftiest palms. They were situated in a swamp, that for greater safety w re surrounded by a strong wall. The lower boughs of the trees selected for habitation had been lopped off, leaving only the highest; as a platform for the bouses. A of one of these houses to the ground showed the distance to be 94 feet.

The ladders leading up to the houses were planted upon the top of the wall. They consisted of a bamboo pole in the centre, to which c os -pi c sabout t o feet long were lashed by vines. To steady these, and also to hold on by, there were double sets of pliant vine stems stretched along the whole length. One ladder was found to measure 60 feet. Another of 50 feet had forty-two tances apart. Up and down these cizzy ladders the native men, women, and children ran like monkeys, never using their hands, but trusting entirely to the sure planting of their feet. At first the Bishop dared not attempt an ascent, and while he stood wondering at the fearlessness of the climbers, he saw a woman go up with a heavy burden on her back as if it was the easiest thing in the world, and not once staying berself with her hands. A sailor in the company of the Bishop who was perfeetly at home in the shrouds of a ship ascended one of the ladders, and when he came down confessed: "I was so afraid my legs shook. Going aloft is nothing to it." At another time the Bishop himself managed to reach one of the arboreal buts. He found it in an inexpressibly filthy condition. The floor was made of matted bamboo, and the roof and sides were of palm-leaf thatch. The roof was low, and there were no apertures for air and light. Everything was grimy with soot and dirt, while the noise of squalling babies, the singing and scolding of women and the chatter of all the nawonderful nest convinced the Bishop him sounded as if they were in the

EXTRACTING NEEDLES OR BITS OF Iron. - A simple and usually successful mode of extracting a needle or any piece of steel or iron broken off in the flesh is accomplished by the application of a simple pocket magnet. An acquaintance of ours had a little daughter who recently broke a needle off in her hand. A surgeon was called, who made several efforts to find the needle by probing and incision, but without success. After the surgeon had left, the mother conceived the idea of trying a magnet; one was procured, and after one or two applications of it the broken fragment was discovered attached to the magnet. The idea will be of special utility to workers in iron. Machine shop surgery is not the most delicate or least painful, though men undergo it rather than stand the loss of time due to an inflamed eye or festered finger. Iron flings have a way of imbedding themselves in the eye, which defies almost every ordinary means for their extrication. For their removal, a small, blunt, pointed bar of steel, well magnetized, will be found excellent, and we should recommend that workmen liable to such injuries keep such an instrument about. It would be a penknife, in a manner similar to a

PROTECT THE GAME. - An exchange vouches for the following: "A farmer's boy in Ohio, observing a small flock of quails in his father's corn field. resolved to watch their motions. They pursued a very regular course in their foraging, commencing on one side of the field, taking about five rows and following them uniformly to the opposite end, returning in the same manner over the next five rows. They continued in this manner until they had explored the greater portion of the field. The lad, suspicious that they were pulling up the corn, fired into the flock, killing bu | me of them, and then proceeded to examine the ground. He found but one stalk disturbed, and this was nearly out of the ground, but the ground adhered to it. The crop of way to public favor. this one he found to be filled with cut worms, bugs, etc., but no corn."

To CLEAN A RUSTY PLOW .- Take a quart of water and pour slowly into half a pint of sulphuric acid. The mixture will become quite warm from chemical action, and this is the reason why the acid should be poured slowly as into the water rather than the water into the acid, and let it remain on the into the acid, and let it remain on the iron until it evaporates. Then wash it again. The object is to give the acid time to dissolve the rust. Then wash with water, and you will see where the worst spots are. Apply some more acid, and rub on those spots with a acid, and rub on those spots with a brick. The acid and the scouring will remove most of the rust. Then wash the mould-bor remove all the acid. [Johnstown, Nov. II, Ti.-tt.]

" MAKING MONEY."

"Fay," writing to the Louisville Courier-Journal of how money is made at the Treasury Department, says: "Take a \$1 Treasury note and look at it. There is a fine steel engraving of Washington-the man, not the city-in the middle of the note. In the left-hand corner there is 'The Landing of Columbus.' There is fine lace-work for the denomination, and the note has lace-work border. Different artisans made lhese designs. It is not all the work of one engraver, for each one has his specialty. No engraver can make two plates exactly alike, no more than the same man can paint two portraits so alike but what there will be some little shade or line in one that does not exist in the other. So, after the engravers make designs for the notes and the Secretary has accepted the design, the plate, being of hard metal, is subjected to a cylinder of solid plate. The cylinder is laid on the plate, and subjected to a pressure of from one to twenty tons. As the plate is depressed, so are the figures and characters raised on the cylinder, which then undergoes a hardening process, and the plates for the notes are taken from the cylinder. From these all our notes are printed. By this process every note printed is exactly alike, and counterfeits can be easily detected. These plates and cylinders can be used constantly for three months, when the plates are retouched by skillful workmen, who have an apartment especially devoted to their branch of work. In this room there are many beautiful specimens of fine steel engravings, for our country took the prize at Vienna for such work."

TWO DAYS AND NIGHTS ON A BAR-REN ROCK.

Three Plymouth (Eng.) residents have just encountered experiences which they will never forget as long as they live. On Saturday, Feb. 20, they started in a boat for a fishing excursion, and in the course of the afternoon landed on the Mewstone, a high-out, desolate, and barren rock, five miles from Plymouth. When they had been ashore half an hour they discovered, to their consternation, that their boat had broken adrift and floated away. The fact that the boat was the only | TIN, COPPER & SHEET-IRON WARE means of reaching the main land was another source of anxiety, for it also contained their fishing gear, provisions, and upper coats. They were thus on an inhospitable rock without food, shelter, light or means of making signals. There they remained all through the black night, and next day being Sunday their prospect of deliverance was then very small. Thus, although exhausted with exposure and famished with hunger, they had to pass the second night on the rock, and the coldest as it was not know what direction they had taken. On Monday, however, a fishing boat passed near enough to be hailed, and the poor fellows were rescued from their little island prison, which would probably have proved fatal at least to one of them had another night been passed on it.

GAS EXPLOSION.

A tremendous and destructive gas explosion occurred recently in Great Lister street, Birmingham. So far as can be ascertained, there has been a leakage from the water mains in the street for some time past, and this caused a subsidence of the soil of the roadway, forming a cavity beneath the surface. It is believed that the sinking of the earth tore away a service-, pipe from the main of the Birmingham and Staffordshire Gas Company, and thus a large escape of gas took place. The gas which had accompleted in this cavity, and in the sewer adjacent it is believed, was fired by a person throwing a lighted fuse into a hole which had formed in the roadway. Instantaneously a terrible explosion took place, followed by two other explosions at other portions of the street, right and left. At the scene of the central explosion the earth was torn up, and shortly a chasm twenty-five feet in diameter and eight feet in depth was formed. The other explosions took place at "man-holes" connected with the sewer, the covers of which were blown away and the pavement tore up. Many of the houses and shops in the neighborhood have been severely damaged, and four or five persons have sustained injuries more or

A TARTAR TENT.

A writer on the Tartars says: Their tents are made of felt, stretched on a frame work of thin curved strips of wood six feet long, which folds up for the camels to carry, and when opened out take the form of a segment of a circle. Four of the frames form the circular side of the tent; and on the top are placed curved rafters which concentrate in a hoop three or four feet in diameter, which is the roof-tree and chimney. As soon as it is all bound together with camel's hair ropes, nothing short of a tornado will make it budge. When the bright fire of the saxaul (a shrub which serves as fuel here,) throws its ruddy light over the bright colored carpets, rugs, and cushions which are so spread within, and lights up the arms and cooking utensils, the saddles and bridles, Tartar guitars, and various household articles which are hung upon a light trellis of wood covered with thick white felt, there are less pleasing interiors to be seen not far from London or New York than the kibitka of the
