

CENTENNIAL RELICS.

Speaking of the display of centennial relics at an old house in Beacon street, the Boston Transcript says: Among the articles of arms and equipments, wearing apparel, personal ornaments, trinkets, silverware, etc., none will attract more attention or be better worthy of it than the "sampler" displaying the grand Hancock house and its surroundings. Though only the house itself is recognizable in this embroidered picture, the topography of the whole region as it then existed is plainly set forth. It matters little that the perspective is of the Chinese sort, and the garden tulips at the feet of the scarlet-and-purple clad proprietor on his prancing steed are as big as the negro servant doffing his hat to the equestrian, or that the dogger crawling across the Back Bay are relatively of elephant size. The needlework nevertheless shows the peak of Beacon Hill with the beacon still upon it, the State House site enclosed by the whitewashed fence of the Hancock cupwasture, and the stone wall at the foot of the grounds, with vessels upon it and swans as large as the ships. Other such personal relics are a suit of handsome and picturesque clothes worn a hundred years ago, mulberry coat and leather breeches, with silver knee-buckles, owned by Franklin Clark, of Stratham, N. H.; Lady Washington's little high-heeled black lasting shoes, faithfully darned with exemplary thrift; Mrs. Hancock's gaudy wedding fan, with its round pasteboard case, her splendidly embroidered apron; the baby cap, of fine linen and finest lace, used for John and John Quincy Adams; the painted silk wedding dress of Rebecca Sherman, daughter of Roger Sherman; a pair of baby shoes made out of the red cloth of a British soldier's coat; a mahogany sideboard used by Hancock, surmounted with a portable clock of the fashion coming into use again, belonging to Governor Hutchinson; cannon ball from Coppel's Hill; silverware used by Paul Revore; passes from the British admiral in Boston to Dr. John Jeffers; journal of the Colonial House of Representatives in 1771; linen bag made in 1796; cartridge box carried at Bunker Hill by Captain Robert Callier; a journal kept by Timothy Nichols in 1759, at the siege of Quebec; a glass and candlestick used by Washington at Newport; canteen used by Samuel Pierce, 1775; bread that came from England in the year 1630, preserved by the ancestors of Lewis Pierce, of Dorchester; clock belonging to Dr. John Warren in 1786; chair used by Governor Hancock; silverware made by Paul Revore; powder horn made by Daniel Lucas and carried by him in the French and Indian war of 1755, and subsequently by his son during the Revolution; dish brought from England in 1625 by the Marsh family; sword carried at Bunker Hill, 1775; the first Boston directory, 1789; and an arm-chair and clothing once owned by General Sullivan.

The patronage of the ladies is respectfully solicited. [6-3-75]

DO NOT WORRY ABOUT YOURSELF.

To retain or recover health, persons should be relieved from all anxiety concerning disease. The mind has power over the body, for a person to think he has a disease will often produce that disease. This we see effected when the mind is intently concentrated on the disease of another. It is found in the hospitals that surgeons and physicians who make a specialty of certain diseases are liable to die of them themselves; and the mental strain is so great that sometimes people die of diseases which they have only in imagination. We have seen a person searick in anticipation of a voyage, ere reaching the vessel of a cancer in the stomach, when they had no cancer or any other mortal disease. A blindfolded man, slightly pricked in the arm, had fainted and died from believing that he was bleeding to death. Therefore, well persons to remain so, should be cheerful and happy, and sick persons should have their attention directed as much as possible from themselves. It is by their faith that men are saved, and it is by their faith they die. As a man thinketh so is he. If he wills not to die he can often live in spite of disease, and if he has little or no attachment to life he will slip away as easily as a child will fall asleep. Men live by their souls, and not by their bodies. Their bodies have no life of themselves, they are only receptacles of life--instruments for their souls, and the will has much to do in containing the physical occupancy of giving it up.

TREES AND RAIN.

The influence of trees upon rain and the general moisture of the atmosphere, which has been discussed of late, receives a strong illustration from the island of Santa Cruz, West Indies. A person a year or two since, who spent the months of February, March and April upon the island, says that when he was there twenty years ago, the island was a garden of freshness, beauty and fertility; woods covered the hills, trees were everywhere abundant, and rains were profuse and frequent. The memory of its loveliness called him back at the beginning of the year, when, to his astonishment, he found about one-third of the island, which is about twenty-five miles long, an utter desert. The forest and trees generally had been cut away, rainfalls had ceased, and a process of desiccation, beginning at one end of the land, had advanced gradually and irresistibly upon the island, until for seven miles it is dried and desolate as the seashore. Houses and beautiful plantations have been abandoned, and the people watch the advance of desolation, unable to resist it, and knowing to a certainty that the time when their own habitations, their gardens and fresh fields will become a part of the waste, is fast approaching. The whole island is doomed to become a desert. The inhabitants believe, and the opinion seems to be confirmed, that this sad result is owing to the destruction of the trees upon the island.

PICKING THE EARS.

Picking the ears is the most mischievous practice; in attempting to do this with hard substances an unlucky motion has many a time pierced the drum and made it as useless as a pierced India rubber life preserver; nothing sharper or harder than the end of the little finger, with the nail pared, ought ever to be introduced into ear, unless by a physician. Persons are often seen endeavoring to remove the "wax" of the ear with the head of a pin; this ought never to be done; first, because it not only endangers the rupture of the ear by being pushed too far in, but if not so far, it may grate against the drum, excite inflammation and an ulcer which will finally eat all the parts away, especially of a scrofulous constitution; second, hard substances have often slipped in, and caused the necessity of painful, dangerous and expensive operations to fish or cut out; third, the wax is manufactured by nature to guard the entrance from dust, insects and unmodified cold air, and when it has subserved its purpose it becomes dry, scaly, light, and in this condition is easily pushed outside by new formations of wax within.

A STRONG RECOMMENDATION.

Going over the Lowell Railroad the other day was a funny little man, who was in evident doubt as to which of two New Hampshire cities it would be advisable for him to stop over night. He questioned the conductor as long as that worthy would stop to listen, and turned to the other occupant of the seat, a thick-necked, short-haired party, and queried: "Is C--- a good place to stop at?" "Fus rate," growled his companion. "Did you ever stop there?" inquired the anxious traveler. "Yes; went up there to stay for one night, and stopped for ten years." "You don't say!" said the delighted interrogator. "What'd you do'n, where'd you stay?" "Opened a store, and stayed in the State Prison," responded the gruff one, and the little gentleman clanged seats and tares at the next station.

Night calls may be made at the residence of JOHN BUCK, Esq. [April 4, 1874-141.] J. GALITZIN LAKE, ATTORNEY Register and Recorder, in Court II.

PRACTICAL INFORMATION.—Framed glass, useful for screens, etc., is made by laying the sheets horizontally and covering them with a strong solution of sulphate of zinc. The salt crystals on drying.

A teaspoonful of powdered borax dissolved in a quart of tepid water is good for cleaning old black dresses of silk, cashmere, or alpaca. Butter will remove tea spots, and water will afterward take out the grease stain.

To renovate old feather beds, when no steam apparatus is convenient, put them out doors during a heavy rain. Let them dry in the sun, beating them occasionally with sticks to loosen the feathers. They should be turned several times and thoroughly dried. A paste of soft soap and starch will take stains out of bed ticking. Sprinkle it over the spots. When dry, scrub off and wash with a soft spongy.

A good cheap paint for floors made of five pounds of French oil, one quarter of a pound of glue, and one gallon of hot water. When well mixed apply one or two coats of linseed oil. To remove old paint, cover with a wash of three parts stone lime, diluted in water, to which one part of green ash is added. Allow the coating to remain for sixteen hours, when the paint may be scraped off. Black shoes may be bronzed by a strong solution of aniline red in alcohol. A solution of chloride of iron will remove nitrate silver stains from hands. Unslacked lime is excellent for clearing small steel articles, such as jewelry, buckles, and the like.

A Couple of Useful Hints.—Very often a screw hole gets so worn that the screw will not stay in. Where this is hardly the regular carpenter makes the hole larger and glues in a large plug, making a nest for an entirely new hole. But this is not always the case and people without tools and in emergency, have to fix the thing as well. The best of all things is to cut narrow strips of cork, and fill the hole completely. Then force the screw. This will make as tight a job as driven into an entirely new hole. Another hint of a similar character may be useful. One often designs put a staple into a block of stone. The hole is made, the staple inserted, and hole melted and run in. But the hole is made with the bottom of the staple to the top, the lead will work out, if there is much jar or strain on the iron. Besides the staple itself is liable to looseness, especially when admits of looseness, compressed after being subject to vibration. A much better article is vulcanized rubber. This is melted and poured into the staple instead of lead. It makes much more durable job, besides, it often more easy to procure than lead, as every store keeps it. Deals in mineral variety. —Am. Eng. Mag.

MARBLE.—The chief place of manufacture of marbles—those pieces of stone which contribute largely to the enjoyment of beauty at Oberstein, on the Nahe, in Germany, where there are granite mills and quarries, the refuse of which is turned into small balls, employed by the American market. The stone used in Saxony is a hard, carbonaceous stone, which is first broken into blocks, nearly square, by blast hammer. These are thrown by hand or two into a small mill, which is formed of a flat, square slab of stone, with a number of eccentric furrows upon its face, the diameter of which is placed upon the stones and partly resting upon the mill. The small block of wood is kept revolving while water flows upon the stone slab. In about fifteen minutes the stones are turned into spheres, then being fit for sale, are heated called marbles. One established with but three mills, turns out a thousand marbles each week.

DEATH TO THE BOOR.—The effort of destroying bugs on the fall and cucumber vines has been so fully tried for years. It is certainly worth a trial:—Dissolve a teaspoonful of saltpetre in a quart of water, one pint of this around each hill, and the earth so that it will not wash much, and the thing is done. It is good for vegetables, but do not use the animal life. The bugs burrow the earth at night, and fall to the morning. It is also good for the grub in peach trees; only use as much—say a quart or two to a tree. There was not a yellow caterpillar leaf on twelve or fifteen trees which it was applied last season. A concentrated solution, applied to young beans, makes them grow abundantly.

HOW TO PRESERVE STRAWBERRIES.—To every pound of strawberries take three quarters of a pound of sugar. Put the strawberries on a large platter and put half of the sugar over them, letting them stand overnight. Next morning drain the juice from the platter, add to it a quart of red currant juice, and to the remainder of the sugar. Roll up this until no refuse remains (only a drop in the strawberries) and let them stand at one time to cover the surface with a preserving kettle, and let them stand out into jars, and seal the jars with berries in the same way. Then the syrup and pour it over the berries.
