

JUST IN TIME.

The following peculiar incident of the rebellion was told to the writer by one of the parties that figured in it, and is strictly true. While Lee was marching through Pennsylvania towards Gettysburg, where probably the hardest struggle of the war took place, the Fourteenth Tennessee, belonging to Stonewall Jackson's old brigade, camped one night on the edge of a small forest about twelve hundred yards from a substantial looking farm house, at which place a safe-guard was placed, as usual, to protect the owner's poultry and pigs. The next morning, bright and early, Captain J. M. Dale and his lieutenant set about preparing breakfast, and selecting a large hollow log which lay a short distance from their tent as the nucleus of their camp fire, gathered a pile of dry limbs about it, and soon a crackling, leaping blaze, rewarded their efforts and stretched out its lurid arms as if to welcome the better-skeltered arrangement in its midst of a broken handled skillet and a veteran coffee pot, which, although minus a spout, was still considered fit for duty. These preparations for breakfast had scarcely been completed, when Captain Dale called the attention of his brother officers to the frantic movements of a bare-headed party in his shirt-sleeves who was approaching from the distant farm house at evidently the highest rate of speed of which his short, dumpy form was capable. On he came, puffing and blowing, tumbling headlong over fences, and then, with a roll and a scramble, starting on again with his fists full of grass and smutches of his own soil upon his forehead and nose, till at last breathless and trembling, he stood before the astonished party of soldiers at the campfire. He was about the wildest looking Yankee they had yet seen—His eyes bulged from their sockets; his short, bristly hair stood out in all directions; in fact, his whole appearance, together with his frantic behavior, led the officers to conclude that he was either an escaped lunatic or that some terrible calamity had befallen his family, and he was only waiting for breath to implore their aid. The fire blazed and popped away, and the old gentleman, as he wildly gazed at it, grew more and more excited, and seemed on the point of bursting with some appalling intelligence which he hadn't the breath to divulge. His excitement grew more and more intense. At times he seemed on the point of unburdening his mind of the secret that was consuming him, and then, as if some warning remonstrance had been whispered in his ear, he choked it down and continued his terrified gazing, first at the fire and then at its interested builders. The flames were rapidly eating their way into the old dry log, and every fresh spurt they made caused the old gentleman to squirm like a grilled eel. At last his excitement reached a crisis, and pointing his crooked, stubby finger at the crackling flames, and bracing himself for the ordeal, he exclaimed: "Great God! gentlemen, I've got fifty thousand dollars in bonds and greenbacks hid in that 'ar hollow log!" The officers took in the situation in a moment. The old farmer, hearing of the approach of the "rebels," and fearing for the safety of his money, had secreted it, and then they had swooped down upon the identical hollow log in which he had placed it, and had set it on fire. They cheerfully recovered the valuables and handed them to their owner. He was very much delighted, and insisted upon their going to his house. They went, and Captain Dale said that he never received better treatment in his life than that tendered him by the old Pennsylvania farmer.

GRAND CENTENNIAL GALA DAY AT EBENSBURG! LARGEST AND BEST SHOW EVER IN EBENSBURG!

SATURDAY, AUGUST 26th.

1776. DECLARATION. 1876. WHEN IN THE COURSE OF HUMAN EVENTS

It becomes necessary for MANAGERS OF SHOW BUSINESS to dissolve the Old Party Bonds which have connected them with OBSOLETE IDEAS, and assume among the inhabitants of this great nation an INDEPENDENCE of action.

PARKE'S MARBLE WORKS, 139 Franklin Street, Johnstown. MONUMENTS, HEAD and TOMB-STONES, COILING, and CARVED SLABS, MANTELS, &c., manufactured of the very best Italian and American Marbles.

THINGS WORTH KNOWING

Scald your wooden-ware often, and keep your tin-ware dry. Cream of tartar rubbed upon white kid gloves cleanses them well. Salt should be administered to cows in small quantities every day during the summer. Clothes lines should be well washed and dried when done with, for if they are not, they will soon become stiff and brittle. A mixture of oil and ink is a good thing to clean kid boots with; the oil softens and the ink blackens them. Stone-mason's saw-dust is infinitely better than soap for cleaning floors and much more economical. You should sow timothy, blue grass, and clover, if you have pasture that will give the land a rest. Moths may be kept out of woolen clothes by wrapping them in muslin. Moths cannot eat through muslin. In sudden attacks of diarrhoea, a large cup of strong hot tea, with oil and sugar, will frequently bring the system to a healthy state. Ink may be taken out of a blot by a little dissolved oxalic acid of sorrel rubbed on with flannel, afterwards washed off with cold water, then rub on some hartshorn. One of the best applications for rheumatism is to bathe the parts affected with water in which potatoes, recently boiled, as hot as water-borne, just before going to bed. A good cement for mending broken crockery ware may be made by mixing together equal quantities of glue, white of egg and white lead, and boiling them together. To remove insects from your paint, pour enough coal oil into a tub of water to make a colored steam on the surface, and inverting the tub place the plant into the water. If you have oil in use the plant may be injured. Buckwheat is a good grain for use as a change from other feed. A day is a fair allowance for mowing. No grain need be ground, as the masticates and digests its food thoroughly. It may not be generally known, but when good meat is a little tainted with warm weather or overcooking, washing it with lime-water will restore its sweetness. Dredging powdered charcoal over it will produce the same effect. An excellent recipe for removing paint or grease spots from garments may be had by mixing four spoonfuls of alcohol with a teaspoonful of salt. Strike the cloth with a brush, and apply with a sponge. If sheep are transferred from one pasture field to another from time to time they will keep the wool clean and make the pastures look neat. In clearing land sheep are also valuable. They will keep the sprouts and stumps much better than men can do so with the hoe. They give manure as soon as a new lot of soil is broken. It is tipped off. Hoed, sowed, mowed—everything is accomplished. They give them the best of life—no quarter. Every time they make an effort for new life they are remembered out down. If you want to clear land, or if you have weeds and sprouts and feel your sheep are their best all a flock of sheep will do as much work in a line as several men with hoes. How to Pasteurize Eggs.—The following is taken from the "Ladies' Repository," bearing date 1875. Curious Method of Pasteurizing Eggs.—The following test and success for keeping and preserving of hens, turkeys, geese and ducks, invented by Mr. Wm. James, a ingenious confectioner of Scotland, in 1841, to whom a patent was granted February 8, 1874. For the purpose of quick lime and white-wash cream tartar. Mix the white-wash with as much water as will render the composition to such a substance as to cause an egg to swim with its head above the liquid; then put the eggs therein, which will keep them perfectly sound for the space of two years at least. A NEW CEMENT.—The following recipe is asserted to produce a kind of very superior character for stone and resisting the action of acids. It becomes as hard as the stone, and is unchangeable in the air, and its action of acids. It is made by mixing together nineteen pounds of stone and forty-two pounds of glass. This mixture exposed to gentle heat until the sulphur melts, when the mass is poured into a mold, and when it has become thoroughly dense, and is then rubbed into powder and permitted to cool. When used for use it is heated to 245° Fahrenheit at which temperature it melts, and is employed in the usual manner. 230° Fahrenheit it becomes a stone, and preserves its solid boiling water. WASHING TREE STEMS.—It is often read about tarting trees, whitewashing them with lime, and so forth. It is something better. Dissolve in warm water and I point the water to it; then the insects and vermin will find them so bitter that they will go away. The great French chemist Raspail, says: "When I came to prison I went to live in Belgium. There I rented a house near Brussels. In the garden I had quite a number of trees, but half the branches were dead. In the spring I went to work and cut off all the dry branches, and then pointed them with the Dissolve. After that the trees grew healthy and bore plenty of fruit."
