FRANK MACDONALD.

If anything was wanted to give us an idea of Roman magnificence, we would turn our eyes from public monuments, demoralized games and grand processions, we would forget the statues in brass and marble, which outnumbered the living inhabitants, so prinerous that one hundred thousand have been recovered and still embellish Italy; and would descend into the lower sphere of material life-those things which attest luxury and tasteto ornaments, dresses, sumptuous living, and rich furniture.

The art of using metals and cutting precious stones surpassed anything known at the present day.

In the decoration of houses, in social entertainments, in cookery, the Romans were remarkable. The mosaic, signet rings, cameos, bracelets, bronzes, vases, couches, banqueting, tables, lamps, chariots, colored glass, gilding, mirrors, mattresses, cosmetics p rfumes, hair dyes, silk ribbons, potteries, all attest great elegance and beauty. The tables of thuga root and Delian bronze were as expensive as the sideboards of Spanish walnut, so much admired in the Great Exhibition at Lendon.

Wood and Ivory were carved as exquisitely as in Japan or China.

Mirrors were made ot polished silver. Glass cutters could imitate the colors of precious stones so well that the Portland vase, taken from the tomb of Alexander Severus, was long considered as a genuine sardonyx brass could be hardened so as to cut

The palace of Nero glittered with gold and jewels. Perfumes and flowers were showered from ivory ceilings. The halls of Æligobulus were hung with cloth and gold, enriched with jewels. His beds were silver, and his tables of gold. Tiberius gave a million of sesterces for a picture of his bed room. A banquet dish of Dæsil his weighed five hundred pounds silver.

The cups of Druses were of gold. Tunics were embroidered with the figures of various animals. Sandals were garnished with precious stones. Drinking cups were engraved with scenes from the poets. Libraries were adorned with busts and with tortoise shell, and covered with gorgeous purple.

The Roman grandees rode in gilded chariots, bathed in marble baths, dined on golden plate, drank from crystal cups, slept on beds of down, reclined on luxurious couches, wore embroidered robes, and were adorned with precious stones.

They ransacked the earth and the seas for rare dishes for their banquets, and ornamented their houses with carpets from Babylon, onyx cups from Bythinia, marbles from Numidia, bronzes from Corinth, statues from Athenswhatever, in short, was precious or curious in the most distant countries.

The luxuries of the bath almost execed belief, and on the walls were magnificent frescoes and paintings, exhibiting an inexhaustive productiveness in landscape and mythological scenes.

THE RED SEA .- The following is taken from a letter appearing in the last number of the Bombay Catholic Examiner: "Unlike the waters of the Indian Ocean, which are of a deep blue color, those of the Red Sea are of a bright emerald green. No one, I suppose, even imagined that they were red; but some may naturally ask how it come to be called the Red Sea. To this question I am not sure that I can give a satisfactory answer. We know that the Yellow Sea of China is socalled on account of the quantity of the soil conveyed into it by the Ganate King, and the waters of the Black Sea, I believe I have somewhere read, are of an unusually dark hue, though the frequent storms to which it is subject would amply justify its present epithet. As for the White Sea of Russia, it probably owes its name to its being, a great part of the year covered with snow and ice. For the name of the Red Sea, I have heard two explanations: one, that when this sea continues calm for several days together, its surface is overspread with myriads of animalcules of a reddish color; the other, that the Arabian coast abounds in reefs of red coral. The correctness of these explanations I was not able to verify, as on the one hand this Sea was always rough, and on the other we never approached very near the Arabian coast. In the 'Lusiad' we are told that it takes its color from the bottom; but what this precisely means appears to me to be not very clear."

USE MILK INSTEAD OF SOAP .- A kidy writing to the New York Times says: "Without giving any recipes for making soap, I wish to tell all the hard-worked farmers' wives how much labor they may save by not using such vast quantities of this article. For nearly five years I have used soap only for washing clothes. In all that time I have not used one pound of soap for washing dishes or other kitchen pur-poses. My family has ranged from three to twenty-five, I have used cistern water, limestone water as hard as possible, and hard water composed of with all these my plan works equally well. It is this. Have your water quite hot, and add very little milk to it. This softens the water, gives the dishes a fine gloss, and preserves the hands; it removes the grease, even that from beef, and yet no grease is found floating on the water, as when soap is used. The stone vessels I alwave set on the stove with a little water in them when the victuals are taken from them; thus they are hot when I am ready to wash them, and the grease is easily removed. I find that my tinware keeps longer when cleaned in this way than by using soap er scouring."

### SEVENTH AVENUE HOTEL,

Corner Seventh Avenue and Liberty Street, PITTSBURG, PA. Terms, \$2.50 and \$3 per Day.

One of the most desirable places to stop at West of the Mountains. Accommodations for 300 Guests.

H. W. KANAGA & CO., PROPRIETORS, LATE OF THE GIRARD HOUSE, CHESTNUT STREET, PHILA'DA.

SCIENTIFIC.

A NOTHER APPLICATION OF MACHINERY. -The little machine some time since invented in France, by the aid of which stenographic writing may be accomplished at the rate of between two and three hundred words per minute, is claimed to have proved a practical success. It seems to be very simple. There is a key-board operated by the hand, and composed of twelve black and an equal number of white keys; and on each side of the instrument is a large key, moved by the pressure of the wrist, and serving to give supplementary signs which simplify the reading of the characters printed. All the keys, when operated, produce indications in ink on a roll of paper, which is taken from a reel in manner similar to that on the Morse telegraphic apparatus; the black keys, however, give long marks, while the white ones cause similar dots to be transcribed. At each pressure of the fingers on the keyboard, the paper is automatically unrolled for about 0.02 of an inch, so that on each line any combination of twelve double signs may be imprinted, and these signs are arranged in three groups of four each, and read from left to right in the ordinary manner. The number of characters which may be made on each division of four is more than sufficient to require a single movement to form a single letter; in other words, with practice, three letters or less can be written at once. If the useless letters be suppressed, such as double letters, e mute, &c., frequently a single movement will produce an entire word. The manipulation of the keyboard requires about six months' practice to ensure skill .- Pat. Right Gazette.

IRON CASTINGS.-A writer in the London Iron on the subject of castings, thinks that the whole trouble of deficient soundness arises from the shrinking not taking place simultaneously. Given a casting of any complexity of form, there cannot, he says, be the slightest danger of breakage from shrinkage if the cooling throughout takes place simultaneously, and if the cores will give to the contraction. This latter necessary quality of the cores should be carefully attended to, as evidently, if the cores will not give, the casting must burst under the contracting strain. There is, however, great danger to the casting, when the cooling is not simultaneous, of many portions being placed under great tension, even to such an extent as to cause them to part. This simultaneous rate of cooling is very seldom to be obtained naturally in any casting. In a very great proportion of castings, the sections of metal are by no means equal throughout, and, even if they are, the inner portions of the casting are not able to radiate their heat away with the same facility as the outer ones. The rate of cooling is primarily dependent on the proportion of the outside cooling surface to the mass of interior metal in any portion. The rate will also, secondarily, depend on its position-whether surrounded by, or in close proximity with other metal, or whether to the outside of the mould.

EXPRESSION-GLASS. - In portrait photography a small mirror, called an expression-glass, in which the sitter can see his face, has been tried with success. It consists of a round glass miror about six inches in diameter. secured by means of a universal joint to a brass ring sliding on an upright rod. The rod is supported by a base, so that it will stand firm on the floor, and by means of the ring and joint the glass can be placed in any desired position. On the top of the mirror is a telescopic sight, to enable the operator to adjust the mirror in line with the sitter's eyes. By the aid of this glass the sitter is assisted to look in the proper direction to obtain the best view of the face, and is given a fixed point on which to rest his eyes. He also sees his face in the mirror, and may thus correct any infelicities of expression. The apparatus is said meet the approval of photographic

BORAX AS A PRESERVATIVE. - Some recent experiments with a solution of borax, by M. Dumas, point to its value as an agent in destroying the spores of parasite plants, like those affecting the grape, etc., its power of destroying low animal life, infusoria and the like, its usefulness in preserving anatomical preparations and in arresting fermentation. It was also tried on milk and fresh meats with success, and is suggested as an aid in the treatment of wounds. S. Beer, of Germany, in the same line of research, announces the use of borax as a solvent in the treatment of timber. The coagulation of the sap may be prevented by a solution of borax, and it may then be removed from the wood by boiling. The timber is said to be greatly improved in color and texture, and in ability to resist decay. By omitting the boiling, and leaving the borax in the wood, it is rendered less liable to injury by fire.

THE ALTITUDE AT WHICH MAN CAN Lave.—In July, 1872, Mr. Glaisher and Mr. Coxwell, ascended in a balloon to the height of 38,000 feet. Pevious to the start, Mr. Glaisher's pulse stood seventy-six beats a minute, Coxwell's at seventy-four; at 17,000, ft. the pulse of Mr. Glaisher was at eighty-four, that of the latter at one hundred. At 19,-000 feet Glaisher's hands and lips were quite blue, but not his face; at 21,000 feet he heard his heart beating, and his breathing became oppressed; at 29,000 feet he became senseless. At the Monastery of St. Bernard, 8,117 feet high, the monks become asthmatic, and are compelled frequently to descend into the valley of the Rhone.

CALIFORNIA bids fair to rival Spain in the field of raisin production. Last year she sent to the San Francisco market twenty thousand twenty pound FTRY IT AND BE CONVINCED OF ITS SUPERIOR MERITS. WILKINSON & O'FRIEL, boxes of raisins. This year she will produce sixty thousand boxes, one vinvard of twenty-four acres alone yielding this season eighty tons of raisin- from two hundred and forty tons North Sixth street, Philadelphis. yielding this season eighty tons of raiof grapes.

TO AIC I ESTABLISHED TWENTY-NINE YEARS.

DR. SWAYNE, The discoverer and compounder of the far-famed

DR. SWAYNE'S COMPOUND

And other valuable preparations, entered upon bis professional career with the important advantage of a regular Medical Education in one of the oldest and best schools in Philadelphia and perhaps in the world. He subsequently served a faithful term of practice in the Philadelphia Dispensary, and for many years attended also in the Hospital. In these institutions he enjoyed the most ampie opportunities of obtaining an insight into diseases in all their various forms as well as for ascertaining the best methods of their treatment. In offering, therefore, to the people of the United States the fruits of his extensive professional experience in the medical compounds as the best results of his skill and observation, that he feels that he is but proffering a boon to every family throughout the land, resting, as he does, confidently, in the merits and efficacious virtues of the remedices he herewith commends. The vast amount of testimony from all parts of the world has proven "Dr. Swayne's Compound of Wild Cherry" the most efficacious remedy known, and it is admitted by our most eminent physicians, and all who have witnessed its wonderful healing properties. The Wild Cherry, in all ages of the world and in all countries where it is known has been justly celebrated for its wonderful medical qualities, but its great power to cure some of the worst and mest distressing diseases among us, was never fully ascertained until the experiments of that skillful physician. Dr. Swayne, had demonstrated its high adaptation, in combination with Pine Tree Tar and other equally valuable vegetable ingredients, which, chemically combined, renders its action tenfold more certain and beneficial in curing all diseases of the throat, breast and lungs. Dr. Swayne, wild Cherry Compound strikes at the root of disease by purifying the blood, restoring the liver and kidneys to healthy actions, invigorating the nervous and shattered constitution. It does so without prostrating or weakening the body in any way. It cures not only the lungs and live

A REMARKABLE CURE.

ABRAHAM HUNSICKER, two miles from Skippackville, Montgomery county, Pa., contracted a serious cold, which settled upon his lungs, with a violent cough, pains in side and breast, and short breath. The symptoms became very alarming; an abscess formed in the lungs and made its way through the side, and discharged made its way through the side, and discharged large quantities of pus externally, so that his physician thought that the power or functions of one of his lungs was totally destroyed, and therefore supposed the case entirely hopeless. This mournful state of things continued for a long time, until he was wasted and worn to a skeleton. He was advised to make use of Swayne's Compound Syrup of Wild Cherry, and through its use was restored to health. Swayne's Compound Syrup of Wild Cherry, and through its use was restored to health.

In every section of the country there are persons who have been cured of consumption, in its several stages, by the use of Dr. Swayne's Medicine. Many have been restored to health after being confined to their beds, reduced to mere skeletons, and troubled with cough, night sweats, hectic fever, and all other indications of an advanced stage of disease. It is true that in all cases where cures are affected the matient must have some lungs remaining, but thousands of

VICTIMS OF CONSUMPTION have descended to their graves who might have been cored if they had used "Swayne's Com-pound Syrup of Wild Cherry" in time.

PHYSICIANS RECOMMEND IT. Dr. Isaac H. Herbein, Strausstown, Berks county, Pa., says: I have made use of Dr. Swayne's Compound Syrup of Wild Cherry for many years, and it always proves effectual in curing long standing coughs and all pulmonary affections. I believe it to be the very best rem-

edy of the kind in the market.
Dr. Thos. J. B. Rhodes, Bovertown, Berks

Dr. Thos. J. B. Rhodes, Bovertown, Berks county, Pa., writes: Your Compound Syrup of Wild Cherry I esteem very highly; have been selling and recommending it to my patients for many years, and it always proves efficacious in obstinate coughs, bronchial and asthmatic affections. It has made some remarkable cures in this section, and I consider it the best remedy with which I am acquainted.

128 Describe symptoms in all communications, and address letters to DR. SWAYNE & SON, 330 N, Sixth street, Philadelphia. No charge will be made for advice.

Sold by Druggists and dealers in medicines generally.

### Itching Piles

Are generally preceded by a moisture like perspiration; distressing it hing, as though pin worms were crawling in and about the rectum, particularly at night when undressing or in bed after geiting warm, oftentimes shows itself around the private parts and frequently females are sorely afflicted, extending into the vagina, proving very distressing. Cases of long standing are permanently cured by simply applying

SWAYNE'S OINTMENT. HERE IS THE PROOF:

Dr. Swayne & Son: Enclosed ple use find one dollar for two boxes of your ointment for Itching Piles. These are for some of my friends who are afflicted with this distressing complaint. The box you sent me a year ago I am glad, yes, I am proud to say it made a perfect cure. I think its efficiency should be published through the length and breadth of the land. You can publish this if you think proper.
