TRACKS AND TRAILS.

One of the remarkable features of uncivilized life is the power savages show of tracing men and beasts over immense distances. Many travelers have spoken of this as something almost miraculous, yet it is only the result of careful observation of certain well known signs; and we have here before us a collection of very common sense hints on the subject. In countries like ours every trace of foot-print or wheel track on roads and paths is soon obliterated or hopelessly confused; but it is otherwise in the wilderness, where neither man nor beast can concealhis track. In Kaffirland, when cattle are stolen, if their foot prints are traced to a village, the headman is held responsible for them, unless he can show the same track going out. A wagon-track in a new country is practically Eindelible. "More especially," say our authors, "is this the case if a fire sweeps over the plain immediately after, or if the wagon passes during or after a prairie fire, We have known a fellow-traveller recognize in this manner the tracks his wagon had made seven years before, the lines of charred stumps crushed short down, remaining to indicate the Are now offering to the people of northern passage of the wheels, though all other impressions had been obliterated by the rank annual growth of grass fully twelve feet high." Sometimes the original soil being disturbed, a new vegetation will spring up along the wagon-track, and thus mark out the road for miles. Even on hard rock a man's bare foot will leave the dust caked together by prespiration, so that a practiced eye will see it; and in the city, and will continue to so sell until the entire stock is disposed of. even if there is no track, a stone will of the pebble which has long lain next the ground, being turned up, If it is still damp, the man or beast that turned it has passed very recently. If a shower of rain has fallen, the track will tell whether it was made before, during, or after the shower; similar indications can be obtained from the dew; and another indication of the time that has elapsed since a man passed by, is furnished by the state of the crushed grass, which will be more or less withered as the time is longer or shorter. Other indications are drawn from the direction in which the grass lies; this tells how the wind was blowing at the time the grass was And don't forget that they have added to their crushed; and by noting previous time at which each part of the track was made. Much, too, can be learned from the form of the foot-print. Say ages generally the think the same than the form of the foot-print. Say changes of the wind, one learns the ages generally turn their toes in, in goods and prices, and bear to mind thatwalking; white men turn theirs out. A moceasin print with the toes turned out would indicate that a white man in Indian walking-gear had gone by; and almost every foot has a print of its own, which enable an experienced tracker to follow a single track among a dozen others. Similarly the characters, S. C. BAILEY. ter of the print will tell whether the man who made it walked freely or was Bailey & Bolsinger, led by others; whether he was in a hurry or travelling slowly; whether he carried a burden, and if he were sober or tipsy. A borse track is equally well marked. It tells when the borse galloped, when he walked, when he stopped to feed or drink; and n scattering of sand and gravel will tell when he was startled by any strange sight. In all this, two things are needed-sharp sight and careful training. The elephant often makes a very curious track as he walks; if he suspects danger, he seemts the ground with the tip of his trunk, and this makes a well-marked serpentine line in the dust. Elephants have changed their tactics since rifle-pits were introduced. Formerly, when their chief danger was a pitfall, the leader of the herd felt the ground inch by inch; and if he detected the covering of a trap, tore it off and left it open. Now they rely much more on scent, and in Cooking Stoves. this way, often from a greater distance, detect the hunter lurking near their drinking places. If so, they will

THE PLACE WHERE THE SUN JUMPS A DAY .- Chatham Island, lying off the coast of New Zealand, in the south Pacific Ocean, is peculiarly sitnated, as it is one of the few inhabita ble points of the globe where the day of the week changes. It is just on the line of demarkation between dates. There high twelve on Sunday or Sunday noon, ceases, and instantly Monday meridian begins .- Sunday comes into a man's house on the east side, and becomes Monday by the time it passes out the western door. A man sits down to his noonday dinner on Sunday, and it is Monday noon before he finishes it. There Saturday is Sunday and Sunday is Monday, and Monday becomes suddenly transferred into Tuesday.

sometimes travel fifty or a hundred

miles to another stream or pool.

A CALCULATING Crow.—A Scotch newspaper of the year 1816 states that a carrion crow, perceiving a brood of fourteen chickens, under, the care of a parent hen, on a lawn, picked up one; but on a young lady opening one; but on a young lady opening the window and giving an alarm, the PARKE' MIRBLE WORKS course of the day, however, the plunderer returned, accompanied by thirteen other crows, when each one seized his bird and carried off the whole robber dropped his prey. In the

respondent writes in the Scientific American that the worst toothache, or neuralgia coming from the teeth, be speedily and delightfully ended by the application of a small bit of cotton, saturated in a strong solution of ammonia, to the defective tooth. Sometimes the sufferer is provoked to and as cheap as the cheapest. (4-12-tf.) momentary nervous laughter by the application, but the pain has disappeared.

JOHNSTOWN, PA.

WM. H. SECHLER, Attorney at Law, Ebensburg, Pa. Office in Colonade Row, (recently occupied by Wm. Kitteit, Esq.,) Centre street. [1-21.76,-tf.] To Restore Rancid Butter.

There is no need of either selling or using bad butter, owing to the fact that it may be easily restored to as good, and perhaps a better condition, than that which characterized it when entirely fresh. No matter how strong, proper management in the plan we are now going to set forth will put it all right every time. Place in a clean barrel three pounds of fresh unslackened lime, and pour over it twenty gallons of cold, pure water. Let it remain one day, stirring occasionally; then let it stand ten or twelve hours without stirring, to give it a chance to settle. At the end of this time pour off the clear liquid and strain through muslin. Place into a clean barrel, and it is ready for the rancid butter. Cut the butter in thin slices, as thin as you can cut it conveniently, and place it directly into the lime water. Put in as much as the water will cover; then over it place a clean floating lid, and butter from being exposed to the air. Keep it in this condition about fortyeight hours, stirring three times a day

with a clean stick. At the end of this time the butter will have entirely lost its rancid condition, the lime having completely neutralized the acid. The solution should be drawn from the barrel, and its place supplied with pure cold water, to stand undisturbed for six hours. Next take out the butter, let it drain an hour or so, then rework exactly after the manner of managing new

This process will leave the butter quite white, and therefore, if for the market, you will need to color it, which you can do with a preparation of annatto, now sold for the purpose in

most drug stores. If you desire to convert the butter, restored as above, into a first-class artiele, tully up to the best Goshen, you will take say fifty pounds of it, which you will place into a revolving churn with six gallons of new milk, and a pint of the juice pressed from the carrots. No other than a revolving churr. will answer, for the hardness of the butter will prevent the motion of a dasher. Start the churn briskly and keep it going for half an hour, after which take out and handle the same as new butter. No other coloring will be needed-the carrot juice will have imparted to it a dark rich vellow color. It will have also added to the flavor, making the flavor resemble that of new butter in every particular .- Journal

tested before the meeting of the Mass-** All persons knowing them- achasetts Dental Society a new remeselves indebted to me are earnestly dy for burns and scalds, consisting of the application of bicarbonate of soda, the simple cooking soda used in all thereby save costs, as I must have families. He dipped a sponge into my books closed in the shortest time boiling hot water, and squeezed it over his right wrist, the water flowing almost completely around the arm, and nearly encircling it with a severe scald two inches in width. Not con-'tent with this, he dipped the sponge in a second time, and pressed it closely on the under side of his wrist for thirty seconds. He then applied bicarbonate of soda to the scalded surface. and laid over it a wet cloth, and the intense pain was banished as if by magic. On the next day after this severe test the scald, with the exception of the part purposely made most severe, was practically healed, only a slight discoloration of the skin show. ing where the scalding water had flowed-this, too, without a second application of the sods. The fiesh on the under side of the wrist had been cooked down to the sweat glands, and the scald was one which ordinarily would have caused an open and painful wound of long duration. The only treatment of this, however, after the first application of the soda, was to keep the part moist with a wet cloth, and no pain was experienced, and it was but a few days before this severe wound was seen to be rapidly healing.

SHADE YOUR GRAPES .- Don't remove the leaves to let the sun to your grapes, as the more the clusters are shaded the better the fruit will be. The idea that grapes will ripen better if exposed to the rays of sun at this season of the year was originally promulgated in the papers by men who Perfumery, Toilet and Washing Soaps, did not understand what they were writing about, as one could hardly do a greater injury to his vines that to strip off the leaves around the fruit. Vines can be propagated by laying down canes about the first of August, of this season's growth, in a trench three cr four inches deep, covering will be sold at the the canes with earth to that depth, Very Lowest Prices for Cash. eight or ten inches in length, within a foot of the end, which should be turned up and tied to a small stake, and in October you will find such canes well rooted.

PRETTY little girl in Shreveport, La., told her papa that there was a pretty little bird in her pretty little room singing a pretty little seng. The af- 12 SOLD BY ALL DRUGGISTS [2-16,-1y.] fectionate parent told her to go back to bed, as it was probably ony a Kittydid: but when he went to bed himself, his wife told him to listen to the strange music of a mocking bird which filled the room. Blithesene and combetes.

A paper containing full information will be sent free of cost on application to CHARLES K. LANDIS, VINELAND, N. J. The following is an extract from a description of Vineland, written by the well-known agriculturist, Solon Robinson, and published in the New York Tribune;

All the farmers were of the "well to do" sort, and sur'ace gently undu'alling, intersected with small streams and occasional wet meadows. In which deposits of peat or muck are stored, sum-cient to fertilize the who'e upland surface, after it has been exhausted of its natural fertility. It is certainly one of the most extensive tracts, in a almost level position, and suitable condition for pleasant farming, that we know of this side of the Western Frairies. We found some of the old-est farms apparently just as profitably productive as when cleared of forest fifty or a hundred years

The geologist would soon discover the cause of during his devotions, and sell this continued fertility. The whole country is a marine deposit, and all through the soil we found evidences of calcareous substances, generally in the form of indurated calcareous mari, showing many distinct forms of ancient shells of the tertiary formation; and this marly substance is scot-tered all through the soil, in a very comminuted form, and in the exact condition most castly assim-ilated by such plants as the farmer desires to culti-vate. [8-25,-15.]
