genera and a multitude of species. Their common characteristic consists in their being provided with wing like membranes extending along the flanks between the anterior and posterior limbs. These membranees are covered with hair, like the other parts of the body, and constitute, when outspread, veritable parachutes, which enable them to sustain themselves in mid air yards at a single bound. Of them the Tagaun is the best known species. When the creature wants to take one of its manufacture wants to take one of its marvelous leaps it stretches its four limbs to their fullest extent and is up-borne through the air on the parachute-like expansion which extends along its sides. Its total leaves to the parachute of the parachute of the expansion which extends along its sides. Its total leaves to the parachute of the expansion which extends along its sides. Its total leaves to the expansion which extends along its sides. Its total leaves to the expansion which extends along its sides. tends along its sides. Its total length is nearly three feet, the tail measuring Consumption can be cured: TRY about one foot eight inches. The color of the animal is a clear chestnut, deepening into brown on the back, and becoming more ruddy at the sides. The little pointed ears are covered with short, soft for of a delicate brown: the tail is heavily clad with bushy, gravish black hairs. The parachutelike membrane is delicately thin, and covered with long fur, chestnut on the upper side and beautiful silvery gravish white on the lower. The Taguan belongs to the genus Pteromys, whose members are much larger than those of the other two genera and inhabit southeastern Asia and the Indian Archipelago. The Sciuropturus are the smallest of the family. They inhabit the northern parts of the globe, ineluding our own country; and intermediate in size are the Anomalures, dwelling on the west coast of Africa.

KEEPING RATS FROM HARNESS .-Almost every person who uses a harness has been more or less annoved by having it injured by rats. We gave a few hints 'as to how this may be avoided, though everybody knows, or affects to know, what is best. The recipes here given are collected from different somees: Take about a teaspoonful of Cayenne pepper, mix it thoroughly with a quart of oil, and rub the harness with the mixture. That, it is claimed, will not only prevent rats and mice from gnawing the harness, but it will also prevent horses and colts from chewing the lines or halters. Take two quarts of green leeks, pour over them one gallon of oil, and let it stand a few days before using; the longer it stands the better. A little benzine rubbed over the harness after it has been oiled is said to be a sure preventative, but it is not recommended by many, on account of the idea that it injures the RUBBER BELTING leather. One ounce of aloes to one gallon of oil will prevent rats from destroying the harness. It is also claimed that by mixing a small quantity, say a tablespoonful, of pine tar to one quart of oil, barness will be most effectually protected from any injury; but if too much is put on, the leather will not absorb it. It will collect dirt, besides making the harness unpleasant to handle. - Foreign Exchange.

A LAKE OF SODA WATER -A lake of soila water known as the Lake of Lonar, in India, has heretofore formed one of the most useful as well as picturesque features of the Hyderabad Assigned Districts. The salt collected from this has been widely used for washing and dying chintzes; and which the dry weather reduces the stable, conteons treatment and low prices. level of the water, vast quantities of April 26, 1878.-3m. socia are gathered on the shore.—
From an official report, however, which has just been issued, we gather that the supply of soda now greatly exceeds the demand, which owing to the distance of the lake from the line of railway, has always been a local one. No fresh supplies were taken from the lake in 1876-77, as large stocks of unsold produce remained on soda are gathered on the shore .stocks of unsold produce remained on hand from the accumulation of the pre- HOW TORY FOR DR. BIRD MIMICS.

Dr. Chrichton, Medical Superintendent of the Crichton Royal Institution, contributes the following ornithological anecdote, which is published by Nature:

"Two or three years ago," he states, "in accordance with our principle of encourag-ing birds to become denizens of the grounds, we put up a few boxes for starlings. One of these was placed on the window-still of the writer's bed-room. Two years ago one of these birds took possession of the aforesaid box. Every morning, for about two or three hours, he perched himself on an iron rail-WHOLESALE AND RETAIL feet of the wiedow, and there executed a comic medley with all the precision and effect of a finished artiste. The attention of the writer was first called to the extraordinary performance by having his window surrounded by what appeared to be a general assemblage of the whole tribe of Ayes, wild and tame. The quacking of the duck, the screech of the lapwing, and the notes of the noorland plover, and many others, were imitated with a precision worthy of Mimos himself. He failed, however, to secure a mate for that year. Last year be was more successful. He revisited in spring his former cottage, and brought a mate with him. The usual family arrangements were made with the greatest care and despatch, when, in due time, a brood of young linguists made their appearance. During the hatching season our linguistic friend, every morning at dawn, resumed his perch within three feet of my bed-room window, and for two or three hours he repeated his extraordinary performance. The birds imitated always rith the greatest precision are the hen, duck, goose, lapwing, plover, heron and guil. The song or whistle of many small birds is also imitated. The only human note imitated is the whistle of the boy. This is frequently heard. It always begins on the same pitch, and passes downward through a major third, forming a beautiful musical curve. He is gradually adding to his vocabulary. During twelve months he has certainly added the cry of the heron, the gabble of the goose, and the cackle of the

Mr. H. O. Forbes sends the follow-

ing instance: "In the grounds of a friend in the neighborhood of London, a colony of startings had for many years built their nests in the trees, in boxes placed here and there for their accommodation. The children of the house—all quite young then, a few years ago—at whose presence the birds showed not the slightest alarm, constantly playing about close to the nests, and of course constantly calling each other by name. There was only one girl in the family, called Maggie; and she was a great pet, perhaps her name was oftener mentioned than the others. Be that as it may, her father was greatly astonished at bearing his daughter's name pronounced in exact imitation of the voice of one of her brothers, who he knew could not be near. For a moment he was puzzled; but close at hand, on the bough of an acacia tree, he detected the mockingbird-a common starling-in the act of deception, which he continued to practice often afterwards.

REVOLUTIONARY BATTLES.

Our readers will do well to preserve the following list of revolutionary battles: Lexington (first skirmish), April 19, 1775; Ticonderoga, May 10, 1775; Bunkerhill, June 17, 1775: Montreal, (Ethen Allen taken,) Sept. 25, 1775; St. John's besieged and captured, Nov. 3, 1775; Great Bridge, Va., Dec. 7, 1775; Quebec, (Montgomery killed,) Dec. 31, 1775; Moore,s Creek Bridge, Feb. 27, 1776; Boston, (British fled.) March 18, 1776; Fort Sullivan, Charleston, June 28, 1776; Long Island, Aug. 27, 1776; Harlem Plains, Sept. 16, 1776; White Plain, Oct. 28, 1776; Fort Washington, Nov. 16, 1776; Trenton, Dec. 27, 1776; Princeton, Jan. 3, 1777; Hubbarton July 7, 1777; Bennington, Aug. 16, 1777; Brandwine, Sept. 11, 1777; First Battle Bemis Heights, Saratoga, Sept. 19, 1777; Paoli, Sept. 20, 1777; Germantown, Oct. 4, 1777; Fort Clinton and Montgomery, Oct. 6, 1777; Second Battle of Bemis Heights, Oct. 7, 1777; Surrender of Burgoyne, Oct. 13, 1777; Fort Mercer, Oct. 22, 1777; Fort Millin, Nov. 1777; Monmouch, 1778; Quaker Hill, R. REMEDY FOR DANDRUFF There are, doubtless, few persons, or

pecially gentlemen, who do not suffrom the inconvenience of dander Physicians seem to consider it a sufficient importance to gain the tention, and the poor victims and either to practice their virtue of en ance, or for a cure, to try some of many nostrums advertised in the lic prints. The intolerable inwhich frequently accompanies troublesome complaint, is not the unpleasant feature, for to persons any pretentions to neatness, the pearance of the white scales or coat collar and shoulders is very tionable. The writer, during a m ber of years, tried the different ale lic solutions of castor oil, and m other preparations, without permes benefit, and, as a last resort, was adopt the plan of clearing the sec with borax and carbonate of poten This proved effectual, but, after a sistent treatment of some months hair became sensibly thinner, and a haps would have soon disappeared together.

The belief that dandruff arises for a disease of the skin, although plan cians do not seem to agree on p point, and the knowledge that the as of sulphur is frequently attended an very happy results in such discase induced me to try it in my case preparation of one ounce of flour at sulphur and one quart of water was made. The clear liquid was present off after the mixture had been reput edly agitated during intervals of a let hours, and the head was saturate with this every morning. In a lo weeks every trace of dandruff hadda appeared, and the hair became soft a glossy, and now, after a discontinua of the treatment for eighteen month there is no indication of the return the disease. I do not in end to exch the modus operandi of the treatment for it is well known that sublimed a phur is almost or wholly insolube an the liquid used was destitute of the color or smell. The effect speaks to

A SURE CURE FOR POULTRY LEG-Lice are the great pest of the posts house. Hens left to range about the farm or garden will keep clean by us lowing in the dust. But for a real part of the year villagers have to kee their hens in confinement, and tel soon, without coastant watchfall lice appear, and if the poultry house near the barn, or within it, the very spread to the cow and horse stall and make trouble there. Whitevel ing, if it were attended to every more would be effectual, if the wash sea trated all the cracks. But this invo a great deal of labor, and it is date to reach all the crevices. There at same objection to sulphur and tolan smoke. A few of the lice are gazu ly left for seed after every smean The best remedy we have ever apply is crude pretroleum, or it more venient, the common kerosene oll for lamps. This is always at la and a few minutes labor with the can will route the enemy. Gene one application is enough to dest them. We apply it directly to perches, pouring a continuous sta from the spout. The hens get this upon their feet and legs, and it is t ber all over the feathers. It is a trating, and the odor seems to be ceedingly offensive to all insects. have had no lousy hens since the plication of the remedy.

SKINNING VS. SCALDING .- I ST man yesterday, says a newspaper respondent, dressing a small [1] manner which was novel to me. stead of the long and laborious on of heating water and scaling shaving, he simply skinned the an He claims that he could skin six in less time than they could be in as well as when the skin was lef process of scalding costs a doll more, many of the farmers who care to eat the pork rind bave bogs skinned, or such of them is intend to keep for their own e was unable to learn what P skins brought in the market, what use they are put.
