MAKING GLASS.

The artificial mineral substance called glass is made by melting together sand or flint, and an alkali,either potash or soda. For many centuries previous to the Christian era the invention was known, although both the date and the manner of its discovery are uncertain. Some suppose that it was found out by accident; the potash contained in the ashes of the wood used by a party of sailors, who had made a large fire on the sea beach, having been united by the heat with the sand of the beach and melted into glass. This lucky accident is alleged to have happened on the coast of Syria, where the earliest manufacture of glass unquestionably began.

All visitors to the Centennial Exhibition, at Philadelphia, will recall the process for glass-manufacture.—They must have learned there, from the exquisite variety of specimens displayed, that the manufacture of glass has now been carried to a very high degree of perfection. The materials used for flint or white glass are sand, potash, the preparations of lead, termed red lead, and litharge, with a small quantity of some other mineral substance. After being well purified, these are mixed, and then melted together, being exposed to an intense heat in large melting pots made of clay, and built into an immense furnace. The sand and potash are the essential articles in the making of glass. But the lead is added in large quantities, as it is found to make the glass melt much more readily; also to give it greater brilliancy and to render it less liable to crack. When these ingredients are thoroughly melted and united (which process usually takes two or three days) the mouth of the melting pot is opened and the liquid glass within is ready to be formed by the workmen into any shape desired.

The mode adopted is to take on the end of an iron tube some of this substance, which is then in a moist, tenacious and plaster state, and to blow through the tube and roll the soft mass on flat iron plates, pressing it with various shaped tools. The workmann at lasts fashions it to the shape desired, which it retains when cold.

Perhaps no other substance known would be moulded into such a variety of forms; for melted glass seems to exceed all things in its ductility and tenacity. Its consistence is something between that of soft putty and treacle, neither solid nor liquid, but capable of being bent, blown out pulled, prepared, twisted or cut, so as to assume, at the wish of the workman, the various forms required.

When the glass articles are made they have to be annealed, that is, cooled slowly in an oven for that purpose. If they did not undergo this process, they would crack on the slightest blow, and would not warm liquids. The qualities that render glass so valuable when manufactured, are its hardness, and the polish of its surface, which makes it so readily to be cleansed, when soiled; its beautiful transparency, enabling it to preserve its contents when it is used to form vessels for liquids; and its being so incorrosive, that it is not acted upon by any ordinary substances, not even by the strongest acids, with one exception. Its value, again, as a substance for glazing windows depends on its transparency and its insolubility so that while it admits the light and even the warmth of the sun, it perfectly excludes the wind and the wet, and even to a great extent, the cold. In fact, it is nothing but the circumstance of its being so common, so constantly before our eyes, that renders us for the most part, insensible to its excelling value and great beauty.

Although glass readily allows the light to pass through it, when it is made into certain shapes it has a great effect upon the light, sometimes, for instance, bringing it into one point.—Such pieces of glass are termed lentes, and are used for making telescopes, microscopes, etc., and singly for spectacles. The dark green glass, of which wine bottles are made, is merely glass of the common dark colored sand, and the coarsest alkali.

NUTMEGS.—Nutmegs grow on trees which like pear trees, are generally over twenty feet high. The flowers are much like the lily of the valley. They are pale yellow and very fragrant.—The nutmeg is the seed of the fruit and mace is the thin covering over this seed. The fruit is about as large as a peach. When ripe it breaks open and shows the little nut inside. The trees grow on the island of Asia and in tropical America. They bear fruit seventy or eighty years, having ripe fruit upon them at all seasons. A fine tree in Jamaica has over four thousand nutmegs on it yearly. The Dutch used to have all the nutmeg trade, as they owned the Banda Islands and conquered all other traders and destroyed the trees. To keep the price up they once burned three piles of nutmegs, each of which was as large as a church. Nature did not sympathize with such meanness. The nutmeg pigeon, found in all the Indian Islands, did for the world what the Dutch had determined should not be done—carried these nuts, which are their food, into all the surrounding countries and trees grew again and the world has the benefit.

POTATOES carefully cut a couple of weeks before planting, and sprinkled with plaster, will sprout earlier and grow better than when cut and planted on the same day. Do not forget this. The result will surprise you.

ESTABLISHED FOR THIRTY-FOUR YEARS.

ATTENTION

EVERYBODY!

We desire to inform the public in general that we have

Established a Store

—AT—

TUNNEL HILL,

And respectfully invite attention to the fact that it embraces

Much More in Quantity and Variety

than is usually kept in stores of the kind.

It is everywhere conceded by those who have given us a call that

OUR STOCK

IS NOT EXCELLED FOR

QUALITY, VARIETY and EXTENT

by any other store in the neighborhood, and as we shall from time to time add new features, new lines of goods—shall always buy in large quantities and allow us to give customers the benefit of such purchases—we hope by strict adherence to Good Goods, Close Prices and Square Dealing, TO MAKE OUR STORE THE GREAT POPULAR

HEADQUARTERS FOR

ALL KIND OF GOODS!

More than that, we shall endeavor to make it the interest of all classes to

DEAL WITH US PERMANENTLY

by carefully catering to their wants and wishes and treating them as we ourselves would wish to be treated in all matters pertaining to business.

TO FARMERS

We would say we have an unlimited demand for all kinds of grain and produce, and can offer them prices in advance of others in the business.

CASH PAID FOR GRAIN WHEN SO BARGAINED FOR

☞ We earnestly solicit the patronage of the public and pledge our best efforts in all transactions.

B. M. JOHNSTON & CO.

STORES { Hollidaysburg, Williamsburg, McKee's, Tunnel Hill.

FLOURING MILL, WILLIAMSBURG, PA.

January 21, 1878.-6m.

HOW IS THIS FOR CHEAP?

S. TEITELBAUM,

OF CARROLLTOWN, OFFERS

8½ lbs. Green Coffee for	$1.00
15 lbs. Brown Sugar for	1.00
10 boxes Essence Coffee for	25c.
1 lb. Pure Japan Tea for	50c.
No. 2 Mackerel, per kit, at	1.50
Lake Herring, per ½ bbl., at	1.20
1 lb. Goshen Cheese for	10c.
1 gal. Non-Explosive C. Oil,	16c.
1 " N. Orleans Molasses,	50c.

AND ALL OTHER GOODS AT

PRICES EQUALLY LOW!

☞ Don't pass this announcement unnoticed, but read and ponder it for your own benefit.—Meantime permit us to state clearly and distinctly that we bestow all parties in these times of depression to invest their money where it will bring the best returns. Hence it is that all are urged to buy their Dry Goods, Groceries, Clothing, and all other Kind of merchandise of

Port Sulphur Matches 6 cts. per lb.

have the largest stock of Queensware in town, at very low prices.

Best Baking Soda at 8 cts. per lb.

Diston's best quality 7 foot Cross Cut Saws, at $3.50.

I have the largest stock of Spices in town, very low.

Good Door Latches as low as 7 cts. each.

Large stock of Table and Bed Castors at lowest rates.

Good Flour at $3.00 per sack.

Largest stock of Glassware and Lamps in town, very low.

A No. 1 Furniture Varnish at $1.40 per gal.

Good Cut Nails at 6 cts. per lb.

Over 100 lengths and sizes Tire and Carriage Bolts kept in stock, very low.

Best Tobacco in the market, at 45 cts. per lb.

200 kegs Nails kept in stock, $2.80 per keg, selected and made of best mack iron. No inferior or scrap iron nails kept in stock.

I have the best Cigars in town for the money.

Over 50 kinds of Window Glass kept in stock, very low prices.

Large stock of flat iron and Horse Shoes always on hand, at low rates.

Good Shelf Oil Cloth at 6 cts. per yd.

Large stock of Table Oil Cloths on hand, very low.

Best Linseed Oil, direct from Factory, at 70 cts. a gal.

Dupont's best F. F. F. Rifle Powder, 16 cts. p. lb.

Best Shot at 10 cts. per lb.

Best Green Coffee at 22 cts. per lb.

Galvanized Coal Buckets as low as 30 cts. each.

Good Brown Coffee at 20 cts. per lb.

Best pure White Lead at $2.40 to $2.80 per keg of 25 lbs.

Stove Pipe, made of the best iron, reduced to 10 cts. per joint.

A large assortment of Tinware on hand, very cheap.

12 papers Essence of Coffee for 25 cts.

Largest stock of Trunks and Valises in Town, at Y. McCullough.

A large assortment of Wall Paper always on hand at lowest prices.

Paper Window Shades at 25 cts. per roll.

Toilet and Washing Soaps in endless variety.

Cook Stoves from 15.00 up to $70.00.

Large assortment of Hair Clothes and Tooth Brushes.

Heating Stoves from $4.00 up to $35.00; very cheap.

Extra No. 1, Salt, $1.65 per barrel.

Revolvers, Pistols and Guns. The largest stock from $1.50 up to $30.00.

Best Carbon Oil at 35 cts. per gal.

The above are only a few of the thousands of articles in the hardware and house-furnishing line which I am offering at equally low prices. I don't advertise to sell at 20 per cent. cheaper, or indeed any cheaper, than other men do, as I think it better to let the public judge that for themselves. But I do advertise to sell goods as low as they can be sold and pay one hundred cents on the dollar. Neither will I throw out a good staple piece of goods over the counter at first cost, or even less, and then charge two or three profits on something else to make up for the loss. Yet it will be my endeavor to sell goods at the lowest living profits, and to give to every purchaser a bargain that I can furnish goods at prices that will be beneficial to both seller and buyer, and not at prices which would benefit one and rob the other.

☞ Thankful for the liberal patronage heretofore conferred upon me, and hoping for a continuance and increase of the same, I remain

MILK OF THE COW-TREE.

Alexander Humboldt remarks that among the many very wonderful natural phenomena which he had during his extensive travels witnessed, none impressed him in a more remarkable degree than the sight of a tree yielding an abundant supply of milk, the properties of which seemed to be the same as the milk of a cow. The adult Indians would go each morning with their slaves from the village or station on the slope of the mountain chain bordering on Venezuela, where Humboldt was stopping, to a forest where they grew, and, making some deep incisions into the trees, in less than two hours their vessels, placed under these incisions, would be full. All present would then partake of the milk, on which the slaves grew fat, and a quantity would be carried home to be given to the children and to be mixed with cassava and maize. The tree itself attains a height of from forty-five feet to sixty feet, has long alternate leaves and was described by Linden as *Brosimum galactodendron*. The milk which flows from any wound made in the trunk is white and somewhat vicid; the flavor is very agreeable. Some time ago, on the occasion of M. Boussingault going to South America, Humboldt requested him to take every opportunity of investigating this subject. At Maracay the tree was first met with, and for more than a month its excellent qualities were daily tested in connection with coffee and chocolate; but there was no opportunity for a chemical analysis. Nor does such appear to have occured till the other day, when, amid the many curious things exhibited be the Venezuelan Government at the Paris Exhibition, there happened to be several flasks of milk, and after a long period M. Boussingault has been enabled to complete his analysis of this substance which is unique in the vegetable world. In a memoir laid before the Academy of France he gives a detailed analysis, and concludes by stating that this vegetable milk most certainly approaches in its composition to the milk of the cow; it contains not only fatty matter, but also sugar, caseine, and phosphates. But the relative proportion of the substance is greatly in favor of the vegetable milk, and brings it up to the richness of cream, the amount of butter in cream being about the same proportion as the peculiar waxy material found in the vegetable milk, a fact that will readily account for its great nutritive powers.

A NEW WAY OF REPAIRING TEETH.—A French dentist maintains that diseased teeth may be extracted, the unsound part removed and then replaced in the sockets, to which they will adhere in time. He says the painful affection known as the toothache arises from various causes—abscess at the root of the tooth, caries of the bone, inflammation of the membrane surrounding the organ, diseases of the gums, etc. In all such cases the extraction of the tooth and the removal of the diseased portion is quite practicable, and experience has proved beyond question that the organ can be replaced in its original position and will reunite with the tissues to which it was originally attached. The dentist bases his assertions on sixty-two operations, of which fifty-seven were perfectly successful; a proportion of about ninety-two per cent. While the action of reintegration is going on some local reaction is caused, which, however, scarcely effects the general system; small boils or abscesses form, which, when they have run their course, leave the consolidation complete in a period of from a week to a fortnight. When the operation does not succeed, the indammation ejects the tooth in a day or two. The age of the patient seems to have no effect on the results, and all sorts of teeth may be drawn, excised and reimplanted.

ITEMS OF INTEREST.—Hens hatch best on the ground; the dampness of the earth will assist in incubation.

The fibres of a tree are strongest near the centre.

There are three hundred and eighty-four bricks in a cubic yard.

Oats and clover thrive best in compact and heavy loams.

Salt given in excess to animals retards fattening.

Small coal produces about three-quarters the effect of large coal of the same variety.

A truss of hay weighs 60 pounds.

A load of hay weighs 2,160 pounds.

A bale of hay weighs 300 pounds.

A bale of cotton weighs 400 pounds.

A sack of wool weighs 308 pounds.

A gallon of pure water weighs 8⅓ pounds.

A pint of pure water weighs 1 1-64 pounds.

A quart of milk weighs 2 pounds 2 ounces.

HUMAN LUCIFER MATCH.—Lighting gas with the finger is a feat anybody can perform. Let a person, in his slippers, walk briskly over a woollen carpet, scuffling his feet thereon, or stand upon a chair, with its legs upon four tumblers to insulate it, and be there rubbed up and down on the body a few times with a muff, by a second individual, and he will light his gas by simply placing his finger to the tube. It is only necessary to take the precaution not to touch anything, or to be touched by anybody, during the trial of the experiment. The shock of electricity acquired by the process we have described is discharged by contact with another object. One person must turn on the gas while another lights it.

NATURAL BRIDGES.

When caverns in which the streams disappear are of small extent, and open at both ends, they form natural bridges. These are frequently met with now in localities where no water exists. A remarkable curiosity of this kind occurs in the valley of Iconouzo, or Pandi, in Mexico. It spans a chasm three hundred and twenty-five feet deep, at whose bottom winds a small current, the Rio de la Suma Paz, enclosed in an almost inaccessible channel. The principal bridge measures forty-eight feet in length by thirty-nine in width, and is six and one half feet thick. Sixty-five feet below this bridge is found a second, consisting of three blocks, which support themselves without any adventitious aid; the central is perforated with a hole, through which the bottom of the abyss is visible.

The bridge of Arc, over the river of Ardeche, is a natural arch, ninty eight feet in height, and one hundred ninety-five in span. The bridge of Veja, near Verona, is one hundred and twenty-five feet high. The magnificent rock bridge of Virginia spans an abyss which separates two mountains—an abyss of two hundred and twenty-five feet, in the deep obscurity of which whiten and seethe the restless waters of Cedar Creek. The marvelous arch is nearly one hundred feet in length, and forty-two feet thick; it is a natural curiosity, which no spectator can survey without feelings of admiration.

In the Lebanon, a torrent emptying into the Beirut river passes under a natural arch two hundred and fifteen feet in height, locally known as the Ainel Laban. A similar bridge is thrown over the Litany, the ancient Leontes, near Tiar Kuraone, where the river has tunneled through a rock upward of ninety feet thick. The road from Wady el Leim to Nihah is carried across this wonderful arch. The arch over the Dog river, near the Niban el Liban, is hollowed out in the solid rock. It is ninety feet thick, its span one hundred and fifty-seven feet and the height of the lower side nearly two hundred feet.

Remarkable Animal Sagacity.

Rev. M. Smith, in his "Elements of Mental Science," narrates that a fox was once seen to run down into the water with a lock of wool in his mouth, and then to sink, inch by inch, until only the wool could be seen, and this on being picked up afterward, was found full of fleas. To have conceived and so successfully to have executed this device for ridding the body of these pests, demanded a train of connected reflections on the part of a self-conscious mind. The fox, in some way, must have made the discovery that fleas cannot live under water, and then he must have reflected that as he slowly sank they would take their departure, provided he furnished them some means of escape. He must have gone in search of the wool or other substance, and afterward stepped down into the stream, revolving this plan which with such marked deliberation and conscious forethought he had so happily originated.

By this same author we find given another instance of fox-sagacity. The wily thief was observed in a field playing around a group of pigs as though the larger swine were objects of terror. The fox suddenly caught up a piece of wood, about the size of a pig, and running toward the fence jumped through an opening. Then he dropped the wood and returned, seized a pig and bounded through the self-same place. Did he compare the size of the block with that of a pig, and then make a trial trip so that he might not fail of escape; or did he design to throw the mother off her guard? In either case he deliberately, consciously planned, exhibiting powers of comparison and judgment.

Lord Brougham, in his "Dialogues," calls attention to the habits of an American bird, called the "Nine-Killer," which catches grasshoppers and strings them upon the twigs of trees as bait for small birds with which it proposes to supply its larder.—This bird may, however, be as unconscious and instinctive in laying its snare as the spider. The same may be true in the case of ants domesticating and milking the aphides, or of the man-of-war birds in their life-long robbery of more skilled fishermen. But there are enough well authenticated instances to force upon us the conviction that animals can originate and carry out plans to meet unforeseen emergencies, that are so complicated and so sagacious that we must accord to them self-consciousness, powers of observation, memory, imagination and judgment. The Duke of Argyll, in his "Primeval Man," claims that man stands radically apart from the lower creations in the fact that he alone is a tool-maker. Had hands been given to the animals, and were they less marvelously endowed with implements of industry or with implements of war, necessity might, for ought we know, have become with them, as with us, the mother of invention.—*Penn Monthly.*

GET ALL THE LIGHT YOU CAN

VIGORENE

THE GREAT POSITIVE CURE

for all DISEASES arising from a deranged condition of the BLOOD, LIVER, NERVES, or PRINCIPAL ORGANS.

The Best Family Medicine on Earth.

$100 IN GOLD

to any person afflicted with a disease that VIGORENE will not relieve or cure, providing the bones or organs are not dead beyond point of recall.

VIGORENE

is scientifically compounded from Herbs, Roots, Barks and Gums found in California and the West Indies, combining a True, Certain, Effective, Powerful and Medicinal

IMMEDIATE effect upon the digestive organs, whether impaired by disease or enervated from any cause, in increase their powers of assimilation and nutrition. It increases the appetite, assists digestion, and gives firmness and tone to the muscular fibre. In short, VIGORENE eliminates the vital processes to remove all impurities, alters, corrects and purifies the fluids, hence is the most wonderful

Blood Purifier

which their healthy functions.

THE ONLY TRUE REMEDY FOR COLDS.

It is useless to expatiate upon the virtues of this GREAT REMEDY. If you are suffering from BILIOUS ATTACK, DYSPEPSIA, or INDIGESTION, IRREGULARITIES, GENERAL DEBILITY, CONSTIPATION, PILES, or SERIOUS DISEASES, or any disorder arising from IMPURE BLOOD, get a bottle of VIGORENE and take it as per directions upon each bottle, in English, German, Spanish and French. Use boldly and persistently, and you will be convinced of its merits than volumes expressed in printers' Ink.

A trial of one bottle insures its adoption in every family, for no Man, Woman or Child can take VIGORENE and remain long sick. It first cleanses the system, then restores it to health, thus curing Disease and establishing health on a permanent, safe and enduring basis.

Put up in large bottles, and is pleasant to take.

Sold by Druggists Generally. Price, $1.00 per Bottle.

Walker & Badger Mfg. Co., Prop'rs,

40 John Street, New York.

VIGORENE

☞ For sale by Lemmon & Murray, Ebensburg, who are authorized to guarantee VIGORENE to prove as represented. [10-11,'78.-ly.]

THE GREAT ENGLISH REMEDY.

Cray's Specific Medicine.

TRADE MARK. Is especially re- TRADE MARK.

commended as an unfailing cure for SEMINAL WEAKNESS, SPERMATORRHŒA, IMPOTENCY, and all diseases that follow as a sequence of Self-Abuse—as Loss of Memory, Universal Lassitude, Pain in Back, Dimness of Vision, Premature Old Age, and many other diseases that lead to Insanity, Consumption and a Premature Grave, all of which are the first caused by deviating from the path of nature and over indulgence. The Specific Medicine is the result of life study and many years of experience in treating these special diseases.

Before Taking! After Taking.

Full particulars in our pamphlets, which we desire to send free by mail to every one.

The Specific Medicine is sold by all Druggists at $1 per package, or six packages for $5; or will be sent by mail on receipt of the money by addressing

THE GRAY MEDICINE CO.,

No. 10 Mechanics' Block, Detroit, Mich.

☞ Sold in Ebensburg by C. T. Roberts, and by Druggists everywhere.

Hamlin & Ewing, Wholesale Agents, Pittsburg, Pa. [8-16.-1y.]

NERVOUS DEBILITY.

Vital weakness or depression: a weak exhausted feeling, no energy or courage; the result of mental over-work, indiscretions or excesses, or some drain upon the system, is always cured by HUMPHREYS' HOMŒOPATHIC SPECIFIC No. 28. It tones up and invigorates the system, dispels the gloom and despondency, imparts strength and energy,—stops the drain and rejuvenates the entire man. Been used twenty years with perfect success by thousands. Sold by dealers. Price, $1.00 per single vial, or $5.00 per package of five vials and $2.00 vial of powder. Sent by mail on receipt of price. Address HUMPHREYS' HOMŒOPATHIC MEDICINE COMPANY 109 FULTON STREET, N. Y.
