MRS. LYDIA E. PINKHAM.
OF LYNN, MASS.

DISCOVERER OF

LYDIA E. PINKHAM'S VEGETABLE COMPOUND.

The Positive Cure

For all Female Complaints.

This preparation, as its name signifies, consists of Vegetable Properties that are harmless to the most delicate invalid. Upon one trial the merits of this Compound will be recognized, as relief is immediate; and when its use is continued, in ninety cases in a hundred, a permanent cure is effected, as thousands will testify. On account of its proven merits, it is to-day commended and prescribed by the best physicians in the country.

It will cure entirely the worst form of falling of the uterus, Leucorrhœa, Irregular and painful Menstruation, all Ovarian Troubles, Inflammation and Ulceration, Floodings, all Displacements and the consequent spinal weakness, and is especially adapted to the Change of Life. It will dissolve and expel tumors from the uterus in an early stage of development. The tendency to cancerous humors there is checked very speedily by its use.

In fact it has proved to be the greatest and best remedy that has ever been discovered. It permeates every portion of the system, and gives new life and vigor. It removes faintness, flatulency, destroys all craving for stimulants, and relieves weakness of the stomach.

It cures Bloating, Headaches, Nervous Prostration, General Debility, Sleeplessness, Depression and Indigestion. That feeling of bearing down, causing pain, weight and backache, is always permanently cured by its use. It will at all times, and under all circumstances, act in harmony with the law that governs the female system.

For Kidney Complaints of either sex this compound is unsurpassed.

Lydia E. Pinkham's Vegetable Compound

is prepared at 233 and 235 Western Avenue, Lynn, Mass. Price $1.00. Six bottles for $5.00. Sent by mail in the form of pills, also in the form of lozenges, on receipt of price, $1.00, per box, for either. Mrs. PINKHAM freely answers all letters of inquiry. Send for pamphlet. Address as above. Mention this paper.

No family should be without LYDIA E. PINKHAM'S LIVER PILLS. They cure Constipation, Biliousness and Torpidity of the Liver. 25 cents per box.

☞ For sale by GEO. A. KELLY & CO., General Agents, Pittsburgh, Pa., and Dr. W. M. LEMON, Druggist, Ebensburg, Pa. [7-2-'80-1y.]

Cathartic Pills

Combine the choicest cathartic principles in medicine, in proportions accurately adjusted to secure uniformity of effect. They are the result of years of careful study and practical experiment, and are the most effectual remedy yet discovered for disorders caused by derangement of the stomach, liver and bowels, which require prompt and effectual treatment. Ayer's Pills are specially applicable to this class of diseases. They act directly on the digestive and assimilative processes, and restore them to healthy action. Their extensive use by physicians in their practice, and by all civilized nations, is one of the many proofs of their value as a safe, sure, and perfectly reliable purgative medicine. Being compounded of the most concentrated virtues of purely vegetable substances, they are positively free from calomel or any injurious properties, and can be administered to children with perfect safety.

Ayer's Pills are an effectual cure for Constipation or Costiveness, Indigestion, Dyspepsia, Loss of Appetite, Foul Stomach and Breath, Dizziness, Headache, Loss of Memory, Numbness, Biliousness, Jaundice, Rheumatism, Eruptions and Skin Diseases, Dropsy, Tumors, Worms, Neuralgia, Colic, Gripes, Diarrhœa, Dysentery, Gout, Piles, Disorders of the Liver, and all other diseases resulting from a disordered state of the digestive apparatus.

As a Dinner Pill they have no equal.

While gentle in their action, these Pills are the most thorough and searching cathartic that can be employed, and rarely give pain unless the system is under the influence of their healing power. They stimulate the appetite and digestive organs; they operate to purify and enrich the blood, and impart renewed health and vigor to the whole system.

Prepared by Dr. J. C. Ayer & Co.,
Practical and Analytical Chemists,
Lowell, Mass.

SOLD BY ALL DRUGGISTS EVERYWHERE.

PARKER'S GINGER TONIC

Ogden's Self Acchenbach & Miller's

FAMILY CHOCOLATE!

An article superior in quality and flavor in price than any other in the market. A prominent and experienced New York physician gives it as his opinion that chocolate is preferable to tea or coffee because it adds strength to the body, new life to the wearied brain, while the nervous system harmonizes the workings of the digestive organs, and gives purity to the blood.

For superior confection, ask your confectioner for Ogden's Spiced Vanilla Chocolate. Acchenbach's special blend and Caldwhill Sts., Phila., Pa.

SKATING.

Up to the year 1850 very little was known of the origin of skating. According to tradition this mode of locomotion was supposed to have originated among the Scandinavians, since it is spoken of in the Eddas. Remote as might be its antiquity it could not, it was urged, have existed before the Iron Age, since iron seemed indispensable for it, and great, therefore, was the astonishment when in 1850 bone skates were found among remains of the Stone Age, which had evidently been used by the inhabitants of lacustrine cities when the waters were frozen around their dwellings. Such skates could have been used, however, only in conjunction with pointed poles used as means of propulsion, and the President of the Glasgow Skating Club, Mr. George Anderson, cites from an old description of London a passage to show that similar contrivances were anciently used on the Thames. The first important improvement on this primitive method was made in Holland, and here also the keel of the skate was flat and smooth, while in most other countries it was channelled, a mistake which, in late times, the Americans were the first to correct. Until about thirty years ago skates were generally made after the Netherland pattern, the keel (or runner) being lengthened before and ending behind in front of the heel of the foot, a construction which rendered possible certain artistic feats, such as pirouettes on the heel, which cannot be performed by one who wears the modern skates. Since then, however, Americans have improved on the old form, which was adapted almost wholly to long and rapid journeys, and they have constructed an apparatus through which skating has been made almost a fine art. With the old short and sharp heel all that was necessary when the skater wished to stop was to raise the toes, whereupon the sharp heel dug into the ice so that one came to a halt almost at once, but if one tries to manœuver with the modern skate he falls. The second change made by the Americans consisted in the removal of the curve at the toe of the runner and the substitution of an angle, whereby it was possible to pirouette on the toes, and we have also greatly improved upon old methods of fastening the skate on the foot and making it comfortable, as, too, upon the form of the sole and the hight of the runner.

As to practical purposes in general and specially artistic motion there are only three forms of the runner which it is profitable to consider; the "normal runner," the "rapid runner" and the "artistic runner." The requisites of the first are that it should permit of easy and swift forward and backward motions, curves, spirals and so on; of the second, that it should permit of the highest possible ease and speed in forward motion, and of the third that, as its name implies, it should be applicable to all sorts of artistic work. Its curve may have so small a tangent as five millimeters, so that the skater can make short and abrupt turns, circles, spirals and so forth, and work all the wonders of modern ice-art. Of the three principal forms of skates—the Halifax Acme Club, the New York Club and the Jackson Haynes forms—that of the New York Club is considered as peculiarly adapted to specialists and artists rather than to beginners, and therefore has not, "at least in Europe," obtained a wide popularity. "The Jackson Haynes model is the peculiar skate of the artist," and of all is best adapted to dancing.

The First Castings of Iron.—Cast-iron was not in commercial use before the year 1700, when Abraham Darby, an intelligent mechanic, who had been some Dutch workmen to establish stoves foundry at Bristol, Eng., conceived the idea that iron might be substituted for brass. This his workmen did not succeed in effecting, being probably too much prejudiced in favor of the metal with which they were best acquainted. A Welsh shepherd-boy named John Thomas had, some little time previous to this, been received by Abraham Darby into his workshop on the recommendation of a distant relative. While looking on during the experiments of the Dutch workmen, he guided to Abraham Darby that he thought he saw where they had missed it. He begged to be allowed to try; so he and Abraham Darby remained alone in the workshop all night struggling with the refractory metal and imperfect moulds. The hours passed on and daylight appeared, but neither would leave his task; and just as morning dawned they succeeded in casting an iron pot complete. The boy entered into an agreement with Abraham Darby to serve him and keep the secret. He was enticed by the offer of double wages to leave his master, but he continued faithful; and from 1708 to 1728 the family of Thomas were confidential and much valued agents to the descendants of Abraham Darby. For more than one hundred years after the night in which Thomas and his master succeeded in making an iron casting in a mould of fine sand contained in frames and with air-holes the same process was practiced and kept secret at Colebrook Dale with pluggent keyholes and barred doors.

Climate and Complexion.—There is a great diversity of opinion as to the difference of complexion to be observed among mankind. Roughly speaking, the hue of the skin varies with the latitude, the fairer races having their homes at a distance from the equator; the darker within or near the tropics. This fact would seem to point to the position of the sun with reference to those on whom he shines as the cause. But the question presents difficulties which this supposition does not aid us to solve. At the same distance from the equator we find the Englishman, the yellow Mongol and the copper-colored Indian. To the north of the white Russians and Finns live the swarthy Lapp and Samoyed. North of the Caucasus are dark-skinned Tartars, south of it fair-complexioned Circassians. The aborigines of America vary less in color than the natives of the old world. None of them are as fair as the Swede, none as black as the negro of Congo, and those living in Brazil on the equator are not the darkest. There are blacker men in Australia and New Guinea than in Borneo and Sumatra, though these islands are on the equator, and those are not. The Shilooks of the upper Nile, who live about ten degrees north of the equator, are blacker than the Moubuttoo, who are six degrees further south. —*Popular Science Monthly.*

A correspondent of the *Scientific American* says: "Let any one who has an attack of lock-jaw take a small quantity of turpentine, warm it and pour it on the wound, no matter where the wound is, and relief will follow in less than a minute. Nothing better can be applied to a severe cut or bruise than cold turpentine; it will give certain relief almost instantly. Turpentine is almost a sovereign remedy for croup. Saturate a piece of flannel with it and place the flannel on the throat and chest, and in a very severe case three or four drops on a lump of sugar may be taken inwardly. Every family should have a bottle on hand."

The *Scientific American*, in a very remarkable and somewhat exciting article, strongly urges the rather novel proposition that babies should not be permitted to become fat. The theory is that all this tissue is not a sign of health, but of disease; that food ought to make muscle and bone and strew and not fat; and that a fat baby, therefore, is not really a healthy baby, but a baby which does not properly assimilate its food.

$10,000

Worth of all kinds of GOODS will be opened this week at

Corn's Store, in Chest Springs.

Everybody should remember that we are NOW OPENING the largest and most complete stock of

Dry Goods, Groceries, Clothing, Boots, Shoes, &c., &c.,

THE NEW STORE OF

S. TEITELBAUM, CARROLLTOWN,

IS THE PLACE TO BUY AT LOWEST PRICES THE VERY BEST

WINTER GOODS OF ALL KIND!

And a cordial invitation is now extended by the proprietor to every reader of the FREEMAN to call and see the large assortment, examine the various qualities, and learn the unsurpassable rates, which are so low that $20 per cent. can positively be saved by those who buy their goods from me. The reason I can sell so cheap is that I bought my entire stock for cash and had hired to sell for cash. It is equivalent, and am therefore prepared to make quick sales at smaller profits than any other merchant in Cambria county. Don't take my word for this, however, but come and see for yourselves.

CARROLLTOWN, MAY 21, 1880.-tf. S. TEITELBAUM.

KIDNEY DISEASES, CONSTIPATION AND PILES,

are quickly and surely cured by the use of KIDNEY-WORT. This new and wonderful remedy which is having such tremendous sale in all parts of the country, works on natural principles. It moves strength and tone to the diseased organs, and through them cleanses the system of accumulated and poisonous humors. Kidney diseases of thirty years standing have been cured, also Piles, Constipation, Rheumatism, &c., which have distressed the victims for years. We have volumes of testimony of its wonderful curative power. No lemons or Alsbolic bitters, which do more harm than good, or drastic pills to use nature's remedy, KIDNEY-WORT, and health will be quickly regained. Get it of your Druggist, Price, $1. (Will send post paid.) WELLS, RICHARDSON & CO., Prop'rs, Burlington, Vt.

THE HISTORY OF ZERO.

"Zero" on the common thermometer, like the fanciful names of the constellations, has curious way a wise man's errors made him immortal by becoming popular. It may be worth while to say that the word itself (zero) comes to us through the Spanish from the Arabic and means empty—hence, nothing. In expressions like "90 degrees below zero," the abbreviation "Fahr." stands for Fahrenheit, a Prussian merchant of Dantzic, on the Baltic Sea. His full name was Gabriel Daniel Fahrenheit.

From a boy he was a close observer of nature, and when only 19 years old in the remarkably cold winter of 1709, he experimented by putting snow and salt together, and noticed that it produced a degree of cold equal to the coldest day of the year, and that day was the coldest one that the oldest inhabitants could remember. Gabriel was the more struck with the coincidence of his little scientific discovery, and hastily concluded that he had found the lowest degree of temperature known in the world, either natural or artificial. He called the degree zero, and constructed a thermometer or rude weather glass, with a scale graduating up from zero to boiling point, which he numbered 212 and the freezing point 32, because, as he thought, mercury contracted thirty-two degrees of its volume on being heated from the temperature of freezing water to zero, and expanded one hundred and eighty on being heated from the freezing to the boiling point.

Time showed that the arrangement instead of being truly scientific, was as arbitrary as the division of the Bible into verses and chapters, and that these two points no more represented the real extremes of temperature than "from Dan to Beersheba" expressed the exact extremes of Palestine.

But Fahrenheit's thermometer had been widely adopted, with its inconvenient scale, and none thought of any better until his name became an authority, for Fahrenheit finally abandoned trade and gave himself up to science.

The three countries which use Fahrenheit are England, Holland and America. Russia and Germany use Reamur's thermometer, in which the boiling point is counted 80 degrees above the freezing point. France uses the centigrade thermometer, so called because it marks the boiling point 10 degrees from freezing point. On many accounts the centigrade system is the best, and the triumph of convenience will be attained when zero is made the freezing point and when the boiling point is put 100 or 1000 degrees from it, and all the subdivisions are fixed decimally.

If Fahrenheit had done this at first, or even if he had done this as one of his many improvements after the public adopted his error, the luck of opportunity, which was really his, would have secured to his invention the patronage of the world.

Butter Making Begins at the Stable.—The best butter makers in the world will fail to get first quality of butter if the cowsare milked in a dirty stable. It is not long ago that a New Jersey farmer asked me how he could best market his butter, which he said was exceedingly good. He enlarged upon his high grade Alderneys and the quality of his pastures and water. Afterward I went out to see a cow I wanted to buy, and he sat down at milking time to let me judge of her flow. I certainly never saw a dirtier pail of milk. Specks of dirt, dust, dandruff, hair, etc., peppered the top and sweated about on the bottom as the pail was emptied. He got only eighteen or twenty cents for his butter, and I think it is worth no more. Does not this ilth flavor the milk, the cream and the butter? Most assuredly it does. This is only obvious filth; the invisible and more potent volatile exhalations from the manure and the urine-saturated floors and all the foul odorous surroundings of most cow stables usually have a greater influence. When milk is once contaminated nothing can be done which will entirely do away with the effect. Part of the evil may be removed by thorough airing of the milk as it is cooled before setting. Shallow setting, no doubt, favors the removal of these odors and aeration during churning has an important effect. But here, as in many other things, the fountain head is the spot at which reform should be commenced.—*American Agriculturist.*

How Bees Are Made Harmless.—The following contains a valuable hint to those who are obliged to handle bees. The little fellows are sharp strikers when disturbed, but it seems there is a very simple way to take the poison out of them. A gentleman says:

Some years ago I was visiting a family in Sussex County, N.J., where a large number of hives of bees were kept in a yard near the farm-house. The bees were unusually cross and belligerent—they would "biz out with angry fyke" at any one who approached their ward. On speaking to the old gentleman on the subject, he said they were feeding on buckwheat, and were full of "pizen," and he would cure them by the time I came again.

On the next day I found the bees quite pacific and quiet, freely letting me come quiet close to their hives. On asking for an explanation of their amiableness, Mr. S. pointed to an effigy hanging near the bee-yards.

He had put this up in the night. In the morning the swaying of the effigy excited the warlike little fellows, and they literally covered their enemy all the forenoon, until all had stung him to their content, and had exhausted all their poison without harm to themselves or others. Verily, knowledge is power.

Uses to which Frosted Potatoes may be Applied.—When potatoes have acquired a disagreeable taste by means of frost, they will make good and wholesome bread by boiling them, as has been mentioned, with salt, mashing or bruising them until they become; then two-thirds should consist of meal, which will destroy the sweet taste, and the dry and generous quality of the meal will effectually correct and destroy anything noxious in the injured roots.

Horses, swine, dogs, etc., may all be fed with potatoes, though frosted, by boiling them and mixing them with oats coarsely ground, or with oat meal, always adding a good quantity of salt in the mixture. Poultry may also be fed with potatoes very much frosted, if mixed with oatmeal in about equal proportions, without salt, as this species of animal cannot admit of it.

A Remedy for Broken Limbs.—When a horse or cow breaks a leg it has generally been considered impossible to set it and effect a perfect cure, but science will triumph. The *New England Farmer* gives an instance: Some time ago a valuable horse belonging to Chas. E. Smith, of Stony Brook, had his leg broken at Port Jefferson. The broken limb was set and the leg was imbedded in plaster of Paris. In two weeks the horse could walk around the stable; in three weeks he drove him home, a distance of five miles, and three weeks after the horse was driven to a road wagon a mile in four minutes.

To Keep Preserves.—Apply the white of an egg with a brush to a single thickness of white tissue paper; with which cover the jars, lapping over an inch or two. It will require no tying, becoming when dry inconceivably tight and strong, and impervious to the air.

KENDALL'S SPAVIN CURE.

The most successful Remedy ever discovered, as it is certain, in its effects and does not blister. READ PROOF BELOW:

From Rev. P. N. CRANCER,

Presiding Elder of the St. Albans District.

St. Albans, Vt., Jan. 20, 1880.

Dr. B. J. Kendall & Co.—Gentlemen: In reply to your letter I will say that I have given your Kendall's Spavin Cure has been very successful indeed. Three or four years ago I procured a bottle from your agent and with it cured a horse of ringbone very much enlarged by spavin. Last season one horse became very lame, and I turned him out for a few weeks, when he became better, but when I put him to the plow he grew worse, and then I discovered that a ringbone was forming. I procured a bottle of Kendall's Spavin Cure and with less than a bottle cured the horse so that he is all lame, neither can the ringbone be found. Respectfully yours, P. N. CRANCER.

PERSEVERANCE WILL TELL.

Shoemaker, Mass., March 19, 1880.

B. J. Kendall & Co.—Gents: In justice to you and myself I think I ought to let you know that I have removed two bone spavins with Kendall's Spavin Cure—every veterinary in this town knew the spavin had been there. I have owned the horse eight months. It took me four months to take the lameness and two for it to disappear. I have used for families. The former is entirely well, not at all stiff, and no bunch to be seen or felt. This is a wonderful used cure. It is a new thing here, but if it does for all what it says it does for one its sale will be very great.

Respectfully yours, CHAS. E. PARKER.

Kendall's Spavin Cure.

Ashland, Schuylkill Co., Pa., June 8, 1880.

Dr. B. J. Kendall & Co.—Gents: A year or two ago I purchased some valuable horses which were affected with a bad case of spavin. I used Kendall's Spavin Cure, and the horses soon after were entirely cured by its use. I consider it the best liniment ever used. Yours truly, CHAS. H. MORGAN, Clerk Ashland House.

STATEMENT MADE UNDER OATH.

To Whom It May Concern.—In the year 1879 I treated with Kendall's Spavin Cure a three-quarter spavin on a mare I owned, entirely half an inch in a horse's eye, and removed the enlargement. I have worked the horse ever since very hard, and he has been free from every appearance of lameness. I have worked the horse with others, and have not seen any difference in the gait of the horse. I have used Kendall's Spavin Cure in my family for the last three years, and find it a good family medicine. I have used it for Rheumatism, Sprains, Bruises, Sore Throat, Colds, etc., and find it a good remedy for all. I have also used it for Spavin, Ringbone, Curb, Splint, Sweeny, Stiffness, Lameness
