There is a large museum just within the main gate of Pompeii, in which are stored vast numbers of articles recovered from the uncovered houses. There are bottles, vases, plates, cups, lamps, money-boxes, jars, door-locks, bolts, bells, eggs, nuts, pieces of bread, dried fruit, glasses, towels, candle-sticks, ladles, scales, needles, baskets, funnels, But among all these familiar things. I was most impressed with an iron safe-au actual iron safe-identical in pattern with those knobbed articles that only a few years ago were consider ed the best safes in the world for banks ing houses and counting rooms. And yet, dozens of persons have within fifty years taken out patents for newly invented safes! I saw also a lot of fishhooks of the identical pattern now so eagerly prized by anglers-the veritable Limerick book. Is the world progress ing? And then there are prestrate figures of men and women-one of the latter evidently on the point of becoming a mother-skeletons of horses, cats, dogs, and rats. And there are many skulls one of them still retaining some of the hair. All the dreadful trophies snatched from the jaws of death, served to illustrate the terrors of that dreadful night when fire and brimstone rained upon the devoted cities and wrapped them in the darkness of death and deso-If I may judge from paintings and

sculptures on the walls of many rooms, and from translations of numerous in scriptions on doorposts, the people of Pompeli were not strictly virtuous in every respect, for there is everywhere evidence that they had reached a remarkable high or low degree of licentiousness as well as luxury. Almost every house had its fountain, its hot and cold baths, its spacious yard or garden, its statuary and pictures, and excellent culinary arrangements. But now it is a silent city. Its housese are tenantless, and its streets are trodden only by the feet of curious tenants. All is desolation-still beautiful and wonderously attractive, but dead, very dead. Despite its paintings and its statues and its glorious sunshine, it was to me but a pathetic suggestion of woe and despair. I would not care to live in a dead city, and if I did, I could find no nearer home. - Geo. Collow's letter From Rome to Maryland Journal.

CURIOUS SEA INHABITANTS .- There is a continual warfare going on in the deep-a constant struggle for the means of sustaining life. The carnivorous deyour the vegetarians, and the mud-eaters awallow both animal and vegetable forms; and this runs all the way down the scale, from the shark and the equally ravenous bluefish to the least of the annelids. These last—the sea-worms are wary, but they cannot escape their If they were to confine themselves to the bottom-where they feed, and where many of them grow to the length of a foot or two-they might in a measure escape, though they would still be a prey to the scup and other fish that know how to dig for them; but they love to swim particularly at night and in the breeding season, and then they are snapped up in countless numbers. They have almost every variety of forms, and their structure is marvelous -monsters with hooked jaws at the end of a proboscis, and with sides of a blueish green, that throw off an infinite variety of idescent hues. Some of the seaworms have scales, others soft bodies; some are sluggish and curl themselves up into balls when disturbed; others are restless, particularly at night; some are round, others flat; some build tubes of sand and cement, woven together, till they make a colony of many hun dred members: the tubes of others are soft and flexible, and some, when disturbed, withdraw within their crooked, calcareous tubes, and close the orifice with a plug. One variety of the serpulæ has three dark-red eyes; another variety has clusters of eyes on each tentacle. The amphipods were accounted of no great value till it was shown by the Fish Commissioners, that these small crustacea furnish a vast amount of food for both salt and fresh-water fishes. Indeed, there is not a creature that wims or crawls that does not become the food of some other animal. A beach-flea is caught up by a scup or a founder, and squids make terrible havoc among young mackerel, while sharks and stingrays find something appetizing in the gaster-

A NEW CURE FOR WOUNDS, -A writer on health topics gives the following directions for curing wounds: As soon as a wound is inflicted, get a little stick-a knife or a file-handle will doand commence to tap gently on the wound. Do not stop for the hurt, but continue till it bleeds freely and becomes perfectly numb. When this point is reached you are perfectly safeall that is necessary is to protect it from dirt. Do not stop short of bleeding and numbness, and do not on any accoun close the opening with a plaster. Nothing more than a little cerate on a clean cloth is necessary. We have used and seen this used on all kinds of simple punctures for years, and never knew a single instance of a wound becoming inflamed or sore after this treatment, Among other cases a coal rake tooth, going entirely through the foot, a rusty darning needle through the foot, a bad bite from a sucking pig, several instances of file shanks through the hand, and numberless cases of rusty pails, awls, etc., but we never knew a failure of this

ONE of the most prolific causes of contracted heels in horses is allowing their shoes to remain on too long. It is seldom we hear of horses having contracted heels, when worked regularly every day. Few persons are aware of the importance of removing a horse's shoes, which should be done at least every month or six weeks. It is too often the custom to allow the shoes, after having once been placed, to remain till worn out before removing them .-American Cultivator.

blue color, and so clear that a sixpence can easily be seen on the white, sandy are overcome, and the bottom readily seen. Sponges when seen on the bottom attached to rocks, look like a big black bunch. They are pulled off their natural beds by forked hooks, which

are run down under the sponge, which

is formed like the head of a cabbage and the roots pull from the rocks. When brought to the surface it is a the touch feels like soap or thick jelly. When a small boat load is obtained crawl is built in which they are placed to die, so that the jelly substance will readily separate from the firm fiber of sticking pieces of brush into the sand out of the water, large enough to consponges are beaten with small sticks, off, leaving the sponge, after a thorough fishermen generally the occupation is wages will hardly average three dollars | taken now will never be forgotten, per week, besides board. There is but little diving for sponges, except for a particularly fine bunch which cannot be got with the hook. The sponge is formed by small insects, and it it the hive in which they live. Different qualities are

FACTS FOR FARMERS. - In order that the farmer may know the number of acres each of his fields contains, he should first provide himself with a streight pole a rod in length and notched in yards. Then if the sides of the field about to be measured are parallel, multiply its length in rods by its breath in rods, and divide it by 160, and the quotient will be the number of acres in the field. But if the field is triangular in shape, multiply the longest side in rods by the greatest width in rods, and divide half the product by 160. If, however, the sides of the field are irregplar lay it off into two or more triangles, as may be most convenient, find the number of acres in each of such trianglee, and add the product together. This will give the number of acres in the whole field.

found growing side by side, although in

certain regions the finer and more valu-

able sponges are found.

Measurement of Corn in Crib,-A of working by different circumstances, All rules are based upon the number of the same under all circumstances, it would be a very easy matter to determine the contents of a crib by one and the same rule. As near right as any rule possibly can be is to calculate twelve cubic feet to a barrel (five bushels) of corn in the crib in the fall, eleven and a half feet in the spring, and about eleven feet in the summer.

PERUNA is in itself a great physician.

OVERWORKED FARMERS .- It bas been said, and we do not doubt the A correspondent of the New Haven truth of the statement, that there is (Conn.) Register tells how they fish for more sickness among the farming comsponges in the Bahamas : When a ves- munities immediately after the season sel arrives at the fishing ground it is of having and harvesting than at any anchored, and the men in small boats other time during the year. Farmers proceed to look for sponges in the water | have just passed through this dreaded below. The water is a beautiful light season, and the excessive heat and anxiety of the mind and wear and tear of the body shows upon their health and bottom in thirty-five or forty feet of strength, But with our crops of grain water. Of course when there is no and hay safely housed in good condition, wind, and the surface of the water is there comes a feeling of satisfaction, still, the sponges are easily seen, but and the short period of comparative when a gentle breeze is blowing a "sea- leisure which most farmers are permita square pine box about twenty inches | ed recreation which should be made use in length, a pane of glass about 10x12 of by all who nave worked diligently inches placed in one end, water-tight. through the seed time and harvest. To use it, the glass end is thrust into Almost all farmers can arrange their the water, and the face of the operator | business so as to make it possible for is placed close to the other. By this them to be absent for a short time withmeans the wave motions of the water out much loss, and the advantages to be gained by spending a few days away from home, where the cares and perplexities are out of sight, will be of great value.

No people need recreation more than the farmers, and none take less. There is more than one thing gained by going away from the farm, and spending a few days among friends and relatives mass of soft glutinous stuff, which to during the comparative "let up" of work at this season. Both pleasure and instruction can be combined in visits to they are taken to the shore, where a the grounds and homes of other farmers. New ideas will be gathered and new methods of culture of certain farm crops will be learned, and above all the farmthe sponge. These crawls are built by er returns to his work with renewed strength of body and mind, and a better feeling of satisfaction and contentment. tain the catch. It takes from five to Therefore we urge all who can spend a six days for the insects to die, when the sponges are beaten with small sticks, follow the same calling. A little time and the black glutinous substance falls and money will not be lost expended in this way, for there is the coming season washing, ready for market. To the of fall seeding and harvest that will again tax the strength of ffarmers, and not a lucrative one. I am told the the short period of rest and enjoyment

> MUSTARD.-Before the year 1729 mustard was little known, according to the Grocer's Journal, at English tables. About this time an old woman of the name of Clements, residing in Durham. began to grind the seed in a mill, and to pass the flour through several process necessary to free it from its husks. She kept her secret to herself for many years, during which she sold large quantities of mustard throughout the country, but especially in London. Here it was introduced to the royal table, where it received the approval of George I .-From the circumstances of Mrs. Clements being a resident at Durham it obtained the name of Durham mustard. consisted in simply grinding the seed into a very fine flour, a bushel of seed, weighing sixty pounds, yielding twentyeight pounds to thirty pounds of flour of mustard. A false taste, however, arose for having an improved color, and the flour of mustard was introduced of which the oil had been abstracted, Hence other materials, such as capsicum powder, tumeric, terra alba, wheaten flour, etc., are added to bring up the flavor and increase the bulk.

not turn out as many bushels to the state of the air which is sure to be folcubic foot as when measured in the lowed by dry weather; but if it increasspring or summer. Hence the necessity es in size, take your great coat with you if you are going from home, for falling weather is not far off. The reason is cubic inches in a bushel of shelled corn, this: When the air is becoming chargwhich is 2150.4. If all corn shelled out ed with electricity you will see every Fails, Vt. cloud attracting all lesser ones towards it, until it gathers into a shower; and on the contrary, when the fluid is passing off, or diffusing itself, then a large cloud will be seen breaking into pieces and dissolving.

B. J. Kendall & Co.—Gents: Having got a horse book of you by mail a year ago, the contents of which persuaded me to try Kendall's Spavin Cure on the hind leg of one of my horses, which was badly swollen and could not be reduced by any other remedy. I got two bottles of Preston & Luddith, Druggists of Wassea, which completely cured my horse. About five years ago I had a three year old colt sweenled very bad. I used your remedy as given in your book without rowelling, and I must say to your credit that the colt is entirely cured, which is a surprise, not only to myself, but also to my neighbors. You sent me the book for the trifling sup of 25 cents and if I could not get another like it I would not take twenty-five dollars for it. Yours, truly, Gree, Mathews.

From a PROMINENT PHYSICIAN.

WASHINGTONVILLE, OBIO, June 17, 1830. Washingtonville, Obio, June 17, 1850.

Dr. B. J. Kendall, & Co.—Gents: Reading your advertisement in Turi, Field and Farm, of Kendali's Spar & Cure, and having a valuable and speedy house who had been lame from spavin for eighteen months, I sent to you for a bottle by express, which in six weeks removed all lameness and enlargement, and also a large splint from another horse, and both horses are to-day as sound as colts. The one bottle was worfs to me one lundred dollars.

Respectfully y urs.

H. A. Benrotett, H. D.

HARRISEURG, PA., Nov. 18th, 1889.

DR. R. J. KENDALLA Co.—Gents: 1 hazza very fine mare that had a bone spavin for a long time. I tried everything man could devise to care it, but all in vain, and was about to give it up when a friend of mine in this city came to me and recommended "Kendall's Spavin Care," which I tried with grand results, removing the bone clear and clean. I then sent 25 cents to you for one of your illustrated Horse Books, and I think there is no better book printed on the horse and his diseases. I have taken great interest in it, and have since sold is copies for you to my neighbors, and will try and do what good I can by getting them for othere Yours truly.

G. W. Miller.

Kendall's Spavin Core on Human Flesh.

When Enosaurage, Vr., Feb. 15, 1881.

Dr. B. J. Kendsli, & Co.—Gents: Several months ago I injured my knee joint, which caused an enlargement to grow the site of a large walnut and caused me very severe pain all the time for four or five weeks, when I began to use Kendall's Spavin Cure with the most satisfactory results. It has completely removed the enlargement and stopped the lameness and pain. I have long known it to be excellent for horses, but now I know it to be the best limimen; for human fisch that I am acquainted with. am acquainted with.
Yours truly, T. P. Lawnence,

KENDALL'S SPAVIN CURE Is sure in its effects and mild in its action, as it does not blister; yet it is penetrating and powerful to reach every deep-seated pain, or to remove Measurement of Corn in Crib.—A multiplicity of rules tends to confuse.

The reason is obvious. New corn will not measure as many bushels to the foot as old corn, on account of shrinkage.

Weather Wisdom.—When you wish to know what the weather is to be, go out and select the smallest cloud you are for many purpose for which a liminont is used for many purpose for which a liminont is used for many purpose for which a liminont is used for many purpose for which a liminont is used for many purpose for which a liminont is used for many purpose for which a liminont is used for many purpose for which a liminont is used for many purpose for which a liminont is used for many purpose for the confuse. A crib of corn measured in the fall will decreases and disappears it shows a for man ever used, noting mildly and yet certain in its effects. to any address on receipt of price bors, Dr. B. J. KENDALL & Co., Enost

Chinese Cream CAMPHOR !

THE GREAT REMEDY FOR THE

RELIEF OF PAIN IN MAN AND BEAST!

been inveterate sufferers of RHEUMA TISM, NEURALGIA, HEADACHE, BACKACHE, FROSTED FEET, STIFF JOINTS, and all pains in every portion of the body. The seat of pain is reached by exciting the pores to action, thus enabling the curative properties of the CHINESE CREAM CAMPHOR to enter, which stifles the pain as soon as the affected parts are reached. The liniment must, upon each application, be rubbed in thoroughly; and in cases of Rheumatism of long standing it should be used three or four times a day, and four applications made each time, until cured. Care, however, should be exercised after the pores are opened, to prevent taking cold.

FOR HORSES

CAMPROR can be had for 50 certs from E. James, Druggist, Ebensburg, Pa.

N. B.—The testimonials of persons using this preparation, either on themselves or their borses, will be thankfully received. TESTIMONIALS.

TESTIMONIALS,

I have tried the Chinese Cream Camphor for Rhenmatism and Nervous Headache, and have found in it instant relief. I have never found its equal in all my travels,—Groung Ryso, London, Eng. (son of Capt. Sir Geo, Byng, R. I. N., Singapore, India.)

I used the Chinese Cream Camphor for a severs attack of Kheumatism in the right shoulder, and can sincerely say, after having tried several other well-known remedies, that it is the best thing I ever med, curing me completely—Milland F Walfon, 117 N. 41st street, West Philadelphia, March I, 1881.

After one application of the Chinese Cream Cam. After one application of the Chinese Cream Camphor I was relieved of frosted feet.—NATHAN EL-KAN, 415 North Third street, Philadelphia, Pa., Jan. 12, 1881. Having suffored severely with frosted feet I used the Chinese Cream Camphor three times, rubbing it in thoroughly, and was cared. My mother tried for nervous hendache, obtaining instant relief, ANYON S. TATZEL, 1215 Melon street, Philad'a. an. 15, 1881. [4-8,-6m.]

\$5 to \$20 per day at home. Samples worth 85 land, Maine, Address Stenson & Co., Port. [3-4, 81.51). \$72 a week. \$12 a day at home enaily made. Costly land, Maine, [3-4, 81.51).

FREMONT, ORIO, Jan. 25, 1881. DR. B. J. KENDALL & Co .- Gents: I think my duty to render you my thanks for benefits and profits which I have derived from your invaluable and far famed Spavin Curs. My cousin and I had a valuable stallion worth \$4,000 which had a very bad spayin, and was pronounced by four eminent veterinary surgeons beyond any cure, and that the horse was done forever. As a last resort I ad-vised my consin to try a bottle of Kendall's Spayin Cure. It had a magical effect—the third bottle cured it and the horse is as well as ever. Dr. Dick, of Edinburgh the source of the cure of the cur of Edinburgh, the eminent veterinary surgeon was an undle of mine, and I take great interest in as-sisting his profession. Yours, truly, James A. Wilson, Civil Engineer.
