JOSEPH McDONALD, ATTORNEY-AT-LAW, Ebensburg, Pa. Office in Altoona, Pa. on Centre street.

### FACTS FOR THE CURIOUS.

The earliest known nails were made of copper. The scepter of Charlemagne was seven feet long. It is said that hysterical persons have a marked taste for vinegar and green fruit.

About four thousand roses are required to make one pound of otto of roses. Remedies are said to be known for the poison of all snakes, except that of the cobra.

A herring yields over 30,000 eggs, myriads of which are devoured by various enemies. In Africa, vegetable butter is made from the fruit of the shea tree and is a richer taste than any made of cow's milk.

Researches among the rock formations of western America show that it is to the New World we must look for the perfect pedigree of the horse. Oysters can live 24 hours in an exhausted receiver. The flame of a candle goes out in one minute, charcoal in five.

Among the largest of Australian snakes is the boa, which sometimes grows to be eighteen feet long, as thick as a man's leg, sluggish by day and of habit nocturnal.

The coffee plant has the general appearance of a cherry tree. It grows to the height of twenty and thirty feet, but in the course of culture is kept cut down to five feet.

The oldest map of the heavens is in National Library at Paris. It was made by the Chinese about the year 600 B. C. and contains one thousand four hundred and sixty stars.

To give lightness to what would be an insupportable weight, the cranial bones of the enormous head of the elephant contains numerous air-cells.

Experiments made to test the muscular power of insects, prove that the smaller the insect the greater the proportionate muscular power. A bee is for its weight thirty times stronger than a horse, for a bee harnessed to a wagon can pull twenty times its own weight.

In many parts of the earth's surface, among which are tracts in our Rocky Mountain region, successive lava sheets have been piled upon another to the height of several thousand feet, and cover areas of many hundred or even thousand square miles.

Stuart, an English authority on games and amusements, speaks of a Yorkshire jumper, named Ireland, whose powers were marvelous. He was six feet high, and at the age of 18 leaped, without the aid of a spring board, over nine horses running by.

Examine the thread-line how we will, we can find in it no mouth, no parts of any kind. It is made and breathes and grows. When it is too large to be comfortable it splits in two, and each half goes its way as a living animal.

Another learned blacksmith has arisen to take the place of the late Dr. Barker, altho his requirements are almost exclusively biblical. He is about publishing a book of 500 pages which he has named "Curiosities of the Bible." He has written it in the last few years in the preparation of the work, and has gone through the bible thirteen times with a minute examination of every verse, deducting from it whatever he thought appeared unusual or worthy of notice to readers, and his knowledge of the scriptures is said to be marvelous.

The blacksmith's name is Ambrose S. Orley, and his shop is at Booth's Corner, Deaneville county, Penn. He works hard at his trade all day and devotes his evenings to study.

A SIMPLE CURE FOR SMALL-POX.—As the prevention or cure of this disease is a question that concerns every person, we ask the perusal of the following, which is taken from the New York Journal of Commerce, one of the most conservative and reliable dailies published in this State.

A lady, the mother of six children, had often sought relief for a pain in the back by taking saltpetre and brandy. She was exposed to the small-pox, and contracted the disease. The premonitory symptoms were violent, fever very high, severe pain in the head and back, and a physician was called during the night, but in doubt as to the nature of the disease, he prescribed saltpetre and brandy, which she took for several days, promising to call early next morning. The fever and pain increased, she asked her husband to prepare for her the old prescription of saltpetre and brandy. The brandy was not to be had, but he crushed a piece of saltpetre as large as a common white bean. This she took in a teaspoonful of cold water. Feeling the dose was not taken, she was repeated. Pain soon subsided and she slept well during the remainder of the night and awakened feeling perfectly well. She had sixty well defined pustules on her face, but they were slight, inflamed and not at all painful. The developments of small-pox on her entire person were in number and appearance in keeping with the above facts. Several families caught the disease, using the same remedy and in every case the result was favorable.

These facts came to us at first hand, and the reader may rely upon them as exact statements without exaggeration. Here were ten to twelve cases all relieved from pain and fever in less than an hour. The pustules were speedily developed, but were more like the first stage of the disease than any other period. As to the quantity given it was not at all defined, but the first patient within an hour must have taken of saltpetre the bulk of three white navy beans.

A HOUSEHOLD HINT.—Children will wear holes through the heels and knees of their stockings almost as fast as they put them on. If before the stockings are worn the heels, toes and knees, are run on the wrong side with yarn the same color, stretching the threads lightly, so that the right side of the stocking will not be marred, it will strengthen them greatly. When stockings become worn so that they cannot be darned without looking rough and uneven, stretch the way to mend them is to knit over the hole. Pick up the stitches and knit to two needles apiece, matching the stocking as nearly as possible, large enough to cover the worn places, even if it covers the old part. In knitting stockings it is a good plan to make the heel and toe of heavier yarn than the rest of the stocking, or to knit a heavy cotton thread the same color as the yarn with the wool. In mending stockings in more than most anything else does the old adage hold true, "a stitch in time saves nine."

EVERY cook who makes tea or coffee in tin pots knows that after a few months her results are not the same as when the pots are new. If she can afford it, she throws them away and buys new ones. They can be cleaned in a very simple manner, and so last a longer time. Put enough water in to nearly fill them, and then drop a few live coals in the water; gases are absorbed, and the coffee or tea pot is fresh and almost as good as new.

PERUNA is in itself a great physician.

### PARKER'S HAIR BALSAM.

This elegant dressing is prepared by those who have used it, and is similar article, on account of its superior qualities. It contains materials only that are beneficial to the scalp and hair, and always restores the youthful color to grey or faded hair.

Parker's Hair Balsam is finely perfumed and is superior to any other hair dressing. It is made and sold by Dr. J. C. Parker, 219 Broadway, New York, N. Y. Price, 25 cents, as directed to drug and medicine stores.

### PARKER'S GINGERTONIC

A Superior Health and Strength Restorer.

If you are a mechanic or farmer, worn out with overwork, or a mother run down by family or household duties, or a lawyer, minister or business man exhausted by mental strain or anxious cares, do not take intoxicating liquors, but use Parker's Ginger Tonic. If you have Consumption, Dyspepsia, Rheumatism, Kidney Complaint, or other chronic disease, stomach, bowels, blood or nerves, Parker's Ginger Tonic will cure you. It is the Greatest Blood Purifier and the Best and Surest Cough Cure Ever Used.

If you are wasting away from age, debility or any chronic weakness, and require a stimulant tonic, Parker's Ginger Tonic will give you strength and vigor up from the first dose but will never intoxicate. It has saved hundreds of lives, and may save yours.

CAUTION.—Beware of cheap imitations. Parker's Ginger Tonic is made and sold by Dr. J. C. Parker, 219 Broadway, New York, N. Y. Price, 25 cents, as directed to drug and medicine stores.

GREAT SAVING BUYING DOLLAR SIZE.

### FLORESTON

Its rich and lasting fragrance has made this delightful perfume exceedingly popular. There is nothing like it. Parker's Floreston is made by Dr. J. C. Parker, 219 Broadway, New York, N. Y. Price, 25 cents, as directed to drug and medicine stores.

### COLOGNE

Its rich and lasting fragrance has made this delightful perfume exceedingly popular. There is nothing like it. Parker's Cologne is made by Dr. J. C. Parker, 219 Broadway, New York, N. Y. Price, 25 cents, as directed to drug and medicine stores.

### BEATTY'S ORGANIC

Beatty's BEATTY'S ORGANIC is a powerful medicine for the cure of all diseases of the stomach, liver, spleen, and bowels. It is made and sold by Dr. J. C. Beatty, 219 Broadway, New York, N. Y. Price, 25 cents, as directed to drug and medicine stores.

### HOPBITTERS

For a quart of a century or more Hopbitters has been the standard medicine for the cure of all diseases of the stomach, liver, spleen, and bowels. It is made and sold by Dr. J. C. Hopbitters, 219 Broadway, New York, N. Y. Price, 25 cents, as directed to drug and medicine stores.

### THE YOUNG CATHOLIC!

HOW TO MAKE LESS NOISE.—Rubber cushions under the legs of the work bench. In a certain factory the hammering of fifty hammers in a room was so audible in the room below the benches having under each leg a rubber cushion. Kegs of sand or saw-dust can be applied in the same way. A few inches of sand or saw-dust, first poured into each keg; or this is laid on a board or block, upon which the legs rest, and around the leg or block is poured fine dry sand or saw-dust. Not only all noise but all vibration and shock are prevented, and an ordinary anvil, so mounted, may be used in a dwelling house without annoying the inhabitants. To mechanics, whose workshops are usually located in dwelling houses, this device affords a cheap and simple relief from a great annoyance.

### HOW JURORS ARE DRAWN.

The following taken from an exchange, explains how jurors are drawn: The modus operandi of securing jurors is not understood by every one. The preceding judge every year orders a quantity of names placed in the wheel in his judgment will suffice for the courts to be held during the ensuing year. The system of drawing these names is as follows: When jurors are required for a particular case, the clerk of the court orders directing him to draw a certain number of jurors—the order is called a venire. As soon as received by the sheriff it is registered in a book for the purpose and is sent to the clerk of the jury board, who prepares his book to receive the requisite number of names when drawn. At a time when it is convenient for the judge, the commission consisting of the sheriff and jury commissioners, the wheel is opened and the names drawn out separately and duly recorded. The first twenty-four names drawn each term are designated as "grand jurors." After the drawing is concluded, the clerk sends to the sheriff a duly certified list of the names drawn, with the residence and occupation of the juror. This list is the sheriff's guide from which he issues out notices for jurors. It becomes the duty of the officer charged with the service of the notice to find the juror, no matter where he is—whether at the address given or at any other. After the effort has been made to find the juror the officer returns to the sheriff all the notices he has been unable to serve and a statement of those served, and the sheriff then prepares his answer to the venire and affixing it thereto returns it to the court clerk, who uses the list for his roll. It will be seen by this statement that the list is a complete one, and absolutely free from any chance of fraud.

An idea is to a certain extent prevalent that the sheriff has the power to prevent that power being in the court alone. If jurors fail to attend at the time named, the court may impose a fine and issue an attachment for the arrest of the juror and his production in court. A great majority of the states have provided by law that jurors under no circumstances are excused on account of business engagements, the judges having taken a firm stand on that point, desiring the services in the courts of just judges. In some of the courts, the sheriff is \$2 per day.

HOW SILVER THIMBLES ARE MADE.—The manufacture of silver thimbles is very simple, but singularly interesting. Silver is mostly used, and is obtained by purchasing the finished thimble. The first operation strikes a novice as almost wicked, for it is nothing more than putting bright silver dollars into a dirty crucible and melting them up into silver ingots. These are melted in the required thickness, and cut by a stamp into circular pieces of the required size. A solid metal bar of the size of the finished thimble is moved by powerful machinery up and down in a bottomless mould of the outside of the thimble, bends the disc into the thimble shape as fast as they can be placed under the descending bar. The inside of the thimble, the work of brightening, polishing and decorating is done in a lathe. First the blank form fitted with a rapidly revolving rod. A slight touch of a sharp chisel takes a thin shaving from the end, another does the same on the side, and the third rounds off the rim. A second wheel prints a different ornament around the centre, while a third wheel with sharp points makes the impressions on the top half and end of the thimble. The inside is brightened and polished in a similar way, the thimble being held in a revolving mould. All that remains to be done is to boil the completed thimble in soap suds to remove the oil, brush them up and pack them for the trade.

A SUBSTITUTE FOR A HOT-BED.—In place of a hot-bed, where it is difficult or undesirable to raise one, the *Vegetarian Agriculturist* says: "If the care of a hot-bed will take time that can be better employed otherwise, it is not worth while for him to make one for the sole purpose of supplying his own garden with plants. It is better to buy a few needed plants, or better still, raise them in winter boxes. We have often referred to these, but their utility does not seem to be generally appreciated. They allow one to provide all the plants of early cabbage, cauliflower, tomatoes, or whatever would be an ornamental garden, which are needed in an ornamental garden, in a sunny kitchen window. When the plants show the rough leaves, i. e., the leaves that follow the seed-leaves, they are to be transplanted to other boxes and given more room."

SOUD-PRODUCING ANTS.—D. M. Lewis, writing to the *Nature*, says: "With reference to the nature whether ants produce sounds which are of such a pitch as to be inaudible to the human ear, I should like to make a suggestion which occurs to me, but which I have no means of carrying out practically. It is a well-known acoustical fact that two notes of high pitch sounding together produce a third, whose vibrational number is the difference of the vibrational numbers of the two primary notes. If now we suppose a vibration at the rate of 50,000 per second, another at the rate of 85,000 per second, we give a different note of 22,000 per second, which would be well within the range of audibility. If then we send up a note beyond the extreme limit of audibility, we shall be able to detect the presence of vibrations which exceed that of the note set up by the highest number of vibrations of audible sound. It would be interesting to know if this has been attempted, and if the microphone can be applied to assist in the investigation.

HOW TO MAKE LESS NOISE.—Rubber cushions under the legs of the work bench. In a certain factory the hammering of fifty hammers in a room was so audible in the room below the benches having under each leg a rubber cushion. Kegs of sand or saw-dust can be applied in the same way. A few inches of sand or saw-dust, first poured into each keg; or this is laid on a board or block, upon which the legs rest, and around the leg or block is poured fine dry sand or saw-dust. Not only all noise but all vibration and shock are prevented, and an ordinary anvil, so mounted, may be used in a dwelling house without annoying the inhabitants. To mechanics, whose workshops are usually located in dwelling houses, this device affords a cheap and simple relief from a great annoyance.

Health is Wealth!
